Nuclear Strategy Roman Kolkowicz,1987 Nuclear strategy and deterrence in their golden age a nostalgically defined period sometime in the mid 1950s to mid 1960s promised to harness and control the nuclear Moloch hopes were high that the civilian strategists flooding into Washington would succeed in designing a new science of war that would safeguard national security provide a stable international environment and develop a rational decision making process for the management of national interests in a hostile nuclear world Three decades later it is a commonplace that the erstwhile promises and pretensions of the nuclear whiz kids and the wizards of Armageddon have not lived up to expectations *Routledge*

A Political Economy of American Hegemony Thomas Oatley,2015-02-16 In *A Political Economy of American Hegemony* Thomas Oatley explores how America's military buildups have produced postwar economic booms that have culminated in monetary and financial crises The 2008 subprime crisis as well as the housing bubble that produced it was the most recent manifestation of this buildup boom and bust cycle developing as a consequence of the decision to deficit finance the wars in Afghanistan and Iraq Earlier instances of financial crises were generated by deficit financed buildups in the 1980s and the late 1960s The buildup boom and bust pattern results from the way political institutions and financial power shape America's response to military challenges political institutions transform increased military spending into budget deficits and financial power enables the United States to finance these deficits by borrowing cheaply from the rest of the world Oatley examines how this cycle has had a powerful impact on American and global economic and financial performance

Political Economy and Grand Strategy Mark R. Brawley,2009-09-10 This book examines traditional balance of power theory from a political economic perspective using historical examples to draw out distinctions between the liberal and realist approach and how this affects grand strategy The realist view of the balance of power theory includes implicit assumptions that economic assets can be turned quickly into power and that states always respond to threats quickly and only with a view to the short run These assumptions drive many of the expectations generated from traditional balance of power theory discouraging realists from looking at domestic sources of power which in turn undermined their ability to frame strategic decisions properly By thinking about how power must be managed over time however we can model the choices policy makers confront when determining expenditures on defense while keeping an eye on the impact of those costs on the economy By emphasizing the role of the state identifying different causal patterns in domestic politics and demonstrating the importance of systemic competition this book aims to establish why a neo classical realist approach is not only different from a liberal approach but also superior when addressing questions on grand strategy This book will be of much interest to students of security studies international political economy grand strategy and IR theory in general Mark R Brawley is Professor of Political Science at McGill University Montreal Canada He is author of several books on International Relations specialising in the connections between political economic issues and security
