Political Modernisation And The Environment The Renewal Of Environmental Policy Arrangements:

Political Modernisation and the Environment J. van Tatenhove, B. Arts, P. Leroy, 2013-03-14 Recent years have witnessed a substantial change in both the organisation and substance of environmental policy both national and international Western societies have seen a change in the relationships between the state the market and civil society leading to new conceptions of governance a process here called political modernisation that gives rise to the institutionalisation of new policy arrangements An environmental policy arrangement refers to the organisation and substance of a policy domain in terms of policy coalitions policy discourses rules of the game and resources The book uses these theoretical notions to analyze changes in organisation substance and governance in several environmental policy domains such as infrastructure policies global policies on climate change and biodiversity green planning and agriculture policy Changing relationships between the state the market and civil society caused by processes of globalization privatisation and individualisation have resulted in a plurality of policy arrangements in different domains Despite the fact that environmental politics has been substantially renewed there is a delicate balance between traditional and new policy arrangements One of the main themes of the book is the explanation of this balance *Political Modernisation and the Environment* J. Van Tatenhove, B. Arts, P. LeRoy, 2014-09-01 *Greening Society* P.J. Driessen, P. Glasbergen, 2013-04-17 This book can be regarded as a monograph on the debates and developments in Dutch environmental policy It has been written with a specific perspective in mind First and foremost the line of approach we have taken was from a multidisciplinary social science point of view The trend in environmental policy is looked at from the angle of sociology policy studies and political science Secondly all analyses depart from the paradigm shift concept This particular paradigm shift is based on the fact that a radical change has taken shape over the years in the way environmental issues are handled Previously environmental policy had always been characterised by a top down approach in which government determined the actual objectives of policy and assumed that it could win over business non governmental organisations and citizens to act in line with those objectives There was also a great deal of faith in the technical solutions to environmental issues Today's environmental policy is based on a totally different philosophy Environmental objectives are now reached in association with business non governmental organisations and citizens These actors are also involved in bringing environmental policy into practice In other words the implementation of policy has a more interactive nature New relationships emerge between government the market and civil society and policy discourses also become integrated The environmental interest is more often weighed against the economic interests the spatial development and against social justice Environment and Society Magnus Boström, Debra J. Davidson, 2018-06-13 This book offers a critical analysis of core concepts that have influenced contemporary conversations about environment society relations in academic political and civil circles Considering these conceptualizations are currently shaping responses to environmental crises in fundamental ways critical reflections on concepts such as the Anthropocene metabolism risk

resilience environmental governance environmental justice and others are well warranted Contributors to this volume working across a multitude of areas within environmental social science scrutinize underlying worldviews and assumptions asking a common set of key questions What are the different concepts able to explain How do they take into account society environment relations What social cultural or geo political biases and blinders are inherent What actions or practices do the concepts inspire The transdisciplinary engagement and reflexivity regarding concepts of environment society relations represented in these chapters is needed in all spheres of society in academia policy and practice not the least to confront current tendencies of anti reflexivity and denialism *Ocean Governance* Stefan Partelow, Maria

Hadjimichael, Anna-Katharina Hornidge, 2023-03-01 This Open Access book on Ocean Governance examines sustainability challenges facing our oceans today The book is organized into three sections knowledge systems policy foundations and thematic analyses The knowledge produced in the book was catalyzed by the scientific outcomes within the European funded Cooperation in Science and Technology COST network Ocean Governance for Sustainability Challenges Options and the Role of Science This network brings together scientists policy makers and civil society representatives from 28 nation states to cooperate on ocean governance research This book offers a compilation of new research material including focused case studies broad policy syntheses and reflective chapters on the history and current status of knowledge production systems on ocean governance New research material is presented although some chapters draw on secondary sources The book starts with synthetic review chapters from the editors outlining past and present knowledge systems addressing how and why ocean governance for sustainability is where it currently stands with critical reflections on existing narratives path dependencies and colonialist histories This is followed by chapters addressing synthesizing and analyzing different legal and policy frameworks for ocean governance both regionally and internationally At the core of the book are the thematic analyses which provide focused case studies with detailed contextual information in support of different ocean governance challenges and sustainability pathways around the world The book concludes with a chapter explicitly targeting students researchers and policy makers with key take away messages compiled by the editors *Principles of Environmental Sciences* Jan J. Boersema, Lucas Reijnders, 2008-12-12 International experts provide a comprehensive picture of the principles concepts and methods that are applicable to problems originating from the interaction between the living non living environment and mankind Both the analysis of such problems and the way solutions to environmental problems may work in specific societal contexts are addressed Disciplinary approaches are discussed but there is a focus on multi and interdisciplinary methods A large number of practical examples and case studies are presented There is special emphasis on modelling and integrated assessment This book is different because it stresses the societal cultural and historical dimensions of environmental problems The main objective is to improve the ability to analyse and conceptualise environmental problems in context and to make readers aware of the value and scope of different methods Ideal as a course text for students this book will also be of

interest to researchers and consultants in the environmental sciences Institutional Dynamics in Environmental Governance Bas Arts, Pieter Leroy, 2006-09-09 Environmental policy in its broadest context has been significantly revitalized and renewed during the last two decades That observation is nothing new attested to by the number of publications conferences and both private and public projects that have been initiated However our understanding of the dynamics of this renewal has generally been informed by studies on single policies and projects leaving us with a limited understanding of what the newness consists of in terms of an integrated perspective This book presents fresh analyses of a number of well known cases but does so from one comprehensive view the so called policy arrangement approach Cases discussed range over organic farming integrated water management nature policy cultural heritage policy integrated region oriented policy corporate environmental management and target group policy always in search of the commonality of experience and conclusions to be drawn in understanding the past and in formulating future perspectives **Branding in Governance and Public Management** Jasper Eshuis, E.H. Klijn, 2012-01-30 Politicians and public managers utilize branding to communicate with the public as well as to position themselves within the ever present media now so central to political and administrative life They must further contend with stakeholders holding contradictory opinions about the nature of a problem the desirable solutions and the values at stake Branding is used as a strategy to manage perceptions motivate stakeholders communicate clear messages in the media and position policies and projects Brands have a unique ability to simplify such messages and motivate different actors to invest their energy in governance processes Public administration scholars so far have however paid little attention to branding This book provides a systematic analysis of branding as phenomenon in governance It deals with the nature of public branding its relation to existing theories in public administration the way branding is used as a managerial strategy in governance processes and the risks and limitations of branding Branding in Public Governance and Management highlights the growing importance of public branding as a public management strategy to influence political events decision making processes and outcomes in governance processes Land and Limits Richard Cowell, Susan Owens, 2005-07-05 In a new and critical analysis this book explores the impact of an influential idea sustainable development on the institutions and practices governing use of land It examines the paradox that in spite of increasing attention to sustainability land use conflict is as ubiquitous and intense as ever **Land and Limits** Susan Owens, Richard Cowell, 2011-03-17 The first edition of this seminal book was written at a time of rapidly growing interest in the potential for land use planning to deliver sustainable development and explored the connections between the two and implications for public policy In the decade since the book was first conceived environmental imperatives have risen still further up the political agenda and land use conflicts have intensified lending even greater importance to the authors research In a rigorous discussion of concepts policy instruments and contemporary planning dilemmas the authors challenge prevailing assumptions about planning for sustainability After charting the remarkable growth in expectations of planning they show

how attempts to interpret sustainability must lead to fundamental moral and political choices *Food, Globalization and Sustainability* Peter Oosterveer, David A. Sonnenfeld, 2012-06-25 Food is increasingly traded internationally thereby transforming the organization of food production and consumption globally and influencing most food related practices This transition is generating unfamiliar challenges related to sustainability of food provision the social impacts of international trade and global food governance Distance in time and space between food producers and consumers is increasing and new concerns are arising These include the environmental impact of food production and trade animal welfare the health and safety of food and the social and economic impact of international food trade This book provides an overview of the principal conceptual frameworks that have been developed for understanding these changes It shows how conventional regulation of food provision through sovereign national governments is becoming elusive as the distinctions between domestic and international and between public and private spheres disappear At the same time multi national companies and supranational institutions put serious limits to governmental interventions In this context other social actors including food retailers and NGOs are shown to take up innovative roles in governing food provision but their contribution to agro food sustainability is under continuous scrutiny The authors apply these themes in several detailed case studies including organic fair trade local food and fish On the basis of these cases future developments are explored with a focus on the respective roles of agricultural producers retailers and consumers **Just Sustainabilities** Julian Agyeman, Robert Bullard, Bob Evans, 2012-04-27 Environmental activists and academics alike are realizing that a sustainable society must be a just one Environmental degradation is almost always linked to questions of human equality and quality of life Throughout the world those segments of the population that have the least political power and are the most marginalized are selectively victimized by environmental crises This book argues that social and environmental justice within and between nations should be an integral part of the policies and agreements that promote sustainable development The book addresses the links between environmental quality and human equality and between sustainability and environmental justice **Environmental Governance and Decentralisation** Albert Breton, 2008-01-01 This book examines how different countries define and address environmental issues specifically in relation to intergovernmental relations the creation of institutions the assignment of powers and the success of alternative solutions It also investigates whether a systemic view of the environment has influenced the policy making process The broad perspective adopted includes a detailed analysis of seventeen countries in six continents by scholars from a range of disciplines economics political science environmental science and law thus producing novel material that moves away from the conventional treatment of decentralisation and the environment in economic literature Providing a comprehensive and up to date analysis of environmental governance worldwide this book will be of great interest to researchers and students in environmental economics environmental politics governance and decentralisation It will also appeal to practitioners and policymakers with responsibilities over the environment **The**

Ecological Modernisation Reader Arthur P.J. Mol, David A. Sonnenfeld, Gert Spaargaren, 2020-11-25 Structural environmental reform by firms and industries governmental and intergovernmental agencies non governmental organisations NGOs and others is a worldwide phenomenon and the focus of this definitive collection Includes a comprehensive introduction to and overview of Ecological Modernisation Theory original state of the art review essays by distinguished international scholars a selection of the best published works and debates from a quarter century of related social science scholarship an emphasis on environmental issues in Asian and other emerging economies and an agenda for continued scholarship policymaking and practice Accessible to students policymakers professionals executives and others interested in deeply understanding contemporary environmental issues and taking effective action for environmental solutions Rigorous and sophisticated for use in graduate and advanced studies Appropriate for courses in Sociology Political Science Policy Studies Geography Environmental Studies Environmental Planning Business Economics Asian Studies Development Studies and other fields **How Power Shapes Energy Transitions in Southeast Asia** Jens Marquardt, 2016-12-01 An understanding of the role of energy related governance systems and the conditions required for a shift towards renewables in developing countries is urgently needed in order to tap into the global potential of low carbon development Although renewable energy sources have become technically feasible and economically viable social and political factors continue to persist as the most critical obstacles for their dissemination How Power Shapes Energy Transitions in Southeast Asia conceptualizes power for the field of sustainable energy governance Based on empirical findings from the Philippines and Indonesia the book develops an analytical approach that incorporates power theory into a multi level governance framework The book begins with a profound background on renewable energy development around the world and presents major trends in development cooperation A power based multi level governance approach is introduced that is rooted in development thinking Examining how coordination and power relations shape the development and dissemination of renewable energy technologies the book also shows how decentralization affects low carbon development in emerging economies Sparking debate on the ways in which energy transitions can be triggered and sustained in developing countries this book will be of great interest to students and scholars of renewable energy development and environmental politics and governance as well as practitioners in development cooperation **Protecting Nature** C. S. A. van Koppen, William T. Markham, 2008-01-01 This book makes a long overdue contribution to the ongoing debate on the role of nature protection organizations and networks The editors have brought together eleven respected sociologists to trace and evaluate the links between nature protection organizations and society in eight European countries and the United States Using analytical frameworks ranging from organization theory to social movements approaches the authors describe the social networks that organizations promoting nature protection have woven which in turn have helped many of them to survive and adapt to changing political and economic circumstances Uncovering these strategies is crucial to understanding how environmental issues are being dealt with via new forms of

governance today The book will be very useful to scholars in organizational studies social movements environmental sociology and environmental politics Matthias Gross Helmholtz Centre for Environmental Research UFZ Leipzig Germany By examining the evolution role and influence of nature protection organizations and networks in eight European countries and the United States this book addresses a long standing gap in comparative research on Western Environmentalism It will appeal to all scholars and students with an interest in environmentalism nature protection and social movement studies Lars H Gulbrandsen the Fridtjof Nansen Institute Norway This book offers a comparative analysis of organizations and networks involved in nature protection in France Germany Italy the Netherlands Norway Poland Sweden the UK and the USA It traces their development from their origins more than a century ago to the present day Throughout this period nature protection has remained an enduring concern to civil society and continues to be a major stream within environmentalism However strategies public support and political success vary greatly among the countries studied Combining rich empirical evidence and theoretical analysis the book sheds light on the important challenges nature protection faces today Providing a detailed description of all the major nature protection organizations and networks including overviews of their current membership activities and as far as available budgets Protecting Nature will be of great interest to lecturers and postgraduate students in social science fields as well as researchers in the fields of environmental policy environmental NGOs social movements civil society nature management and policy Members of nature protection environmental and other civil society organizations who seek a better understanding of the historical development of nature protection organizations and networks as well as the strategies employed by those organizations will also find much to interest them in this book Transitions to Sustainable Development John Grin, Jan Rotmans, Johan Schot, 2010-05-26 Over the past few decades there has been a growing concern about the social and environmental risks which have come along with the progress achieved through a variety of mutually intertwined modernization processes In recent years these concerns are transformed into a widely shared sense of urgency partly due to events such as the various pandemics threatening livestock and increasing awareness of the risks and realities of climate change and the energy and food crises This sense of urgency includes an awareness that our entire social system is in need of fundamental transformation But like the earlier transition between the 1750 s and 1890 s from a pre modern to a modern industrial society this second transition is also a contested one Sustainable development is only one of many options This book addresses the issue on how to understand the dynamics and governance of the second transition dynamics in order to ensure sustainable development It will be necessary reading for students and scholars with an interest in sustainable development and long term transformative change *A Primer on Environmental Sciences* Matthew N. O. Sadiku, Uwakwe C. Chukwu, Olaniyi D. Olaleye, 2022-02-09 In a modern society it is easy to forget that our society depends largely on the environmental processes that govern our world Environment refers to an aggregate of surroundings in which living beings such as humans animals and plants live and non living things exist It includes air water land living organisms

and materials surrounding us The environment is an important part of our daily lives Environmental issues are now part of every career path and employment area Environmental science is an interdisciplinary field that applies principles from all the known technologies and sciences to study the environment and provide solutions to environmental problems It is the study of how the earth works and how we can deal with the environmental issues we face There is an ever demanding need for experts in this field because the environment is responsible for making our world beautiful and habitable For this reason environmental science is now being taught at high schools and higher institutions of learning Education on environmental science will empower the youths to take an active role in the world in which they live

Governance for Sustainable Development Jens Newig, Jan-Peter Voß, Jochen Monstadt, 2013-09-13 Sustainable development stirs up debate about the capacities of political steering and governance The complexity of the task expounds limits of steering in three dimensions goals knowledge and power Sustainability goals are subject to changing and controversial risk perceptions values and interests Moreover knowledge of the coupled dynamics of society technology and nature is limited Finally the power to shape structural change in society and technology is distributed across a multitude of actors and societal subsystems Steering attempts therefore have to cope with conflict and ambivalence with uncertainty and with a lack of central control and they have to face the necessity of coordinating different actor groups and social networks This volume explores steering strategies and governance arrangements for sustainable development with a view to these problem dimensions The contributions by authors from various disciplines approach these challenges from different conceptual angles ranging from positivist managerial up to post modern constructivist perspectives By combining theoretical reflections with insights from empirical research in European and American contexts the volume maps out conditions and identifies approaches which both reflect the limits of steering and reveal options for constructively taking up the task of sustainable development in science and practice

Multilevel Regulation and the EU Andreas Føllesdal, Ramses A. Wessel, Jan Wouters, 2008 Rules are no longer merely made by states but increasingly by international organizations and other international bodies At the same time these rules do impact the daily life of citizens and companies as it has become increasingly difficult to draw dividing lines between international EU and domestic law This book introduces the notion of a multilevel regulationa TM as a way to study these normative processes and the interplay between different legal orders It indicates that many rules in such areas as trade financial cooperation food safety pharmaceuticals security terrorism civil aviation environmental protection or the internet find their origin in international cooperation Apart from mapping multilevel regulation on the basis of a number of case studies the book analyses its consequences in relation to forms of legal protection and legitimacy In that respect it proposes an agenda for research to study how to cope with multilevel regulation This work offers valuable resources for researchers involved in studying the interplay between international European and domestic law For practitioners it offers background information on the ways in which many international rules come into being
