Political Economics:

Political Economics Torsten Persson, Guido Tabellini, 2002-01-25 What determines the size and form of redistributive programs the extent and type of public goods provision the burden of taxation across alternative tax bases the size of government deficits and the stance of monetary policy during the course of business and electoral cycles A large and rapidly growing literature in political economics attempts to answer these questions But so far there is little consensus on the answers and disagreement on the appropriate mode of analysis Combining the best of three separate traditions the theory of macroeconomic policy public choice and rational choice in political science Torsten Persson and Guido Tabellini suggest a unified approach to the field As in modern macroeconomics individual citizens behave rationally their preferences over economic outcomes inducing preferences over policy As in public choice the delegation of policy decisions to elected representatives may give rise to agency problems between voters and politicians And as in rational choice political institutions shape the procedures for setting policy and electing politicians The authors outline a common method of analysis establish several new results and identify the main outstanding problems The American Political Economy Jacob S. Barbara Ehrenreich Modern Political Economics Yanis Varoufakis, Joseph Halevi, Nicholas Theocarakis, 2012-03-29 Once in a while the world astonishes itself. Anxious incredulity replaces intellectual torpor and a puzzled public strains its antennae in every possible direction desperately seeking explanations for the causes and nature of what just hit it. 2008 was such a moment. Not only did the financial system collapse and send the real economy into a tailspin but it also revealed the great gulf separating economics from a very real capitalism. Modern Political Economics has a single aim: To help readers make sense of how 2008 came about and what the post 2008 world has in store. The book is divided into two parts. The first part delves into every major economic theory from Aristotle to the present with a determination to discover clues of what went wrong in 2008. The main finding is that all economic theory is inherently flawed. Any system of ideas whose purpose is to describe capitalism in mathematical or engineering terms leads to inevitable logical inconsistency, an inherent error that stands between us and a decent grasp of capitalist reality. The only scientific truth about capitalism is its radical indeterminacy, a condition which makes it impossible to use science's tools, e.g. calculus and statistics, to second-guess it. The second part casts an attentive eye on the post-war era, on the breeding ground of the Crash of 2008. It distinguishes between two major post-war phases: The Global Plan 1947-1971 and the Global Minotaur 1971-2008. This dynamic new book delves into every major economic theory and maps out meticulously the trajectory that global capitalism followed from post-war almost centrally planned stability to designed disintegration in the 1970s to an intentional magnification of unsustainable imbalances in the 1980s and finally to the most spectacular privatisation of money in the 1990s and beyond. Modern Political Economics is essential reading for Economics students and anyone seeking a better understanding of the 2008 economic crash.

Incentives and Political Economy Jean-Jacques Laffont, 2000-03-30 Mainstream economics has recognized only recently the necessity to incorporate political constraints into economic analysis intended for policy advisors. *Incentives and Political Economy* uses recent advances in contract theory to build a normative approach to constitutional design in economic environments. The first part of the book remains in the tradition of benevolent constitutional design with complete contracting. It treats politicians as informed supervisors and studies how the Constitution should control them in particular to avoid capture by interest groups. Incentive theories for the separation of powers or systems of checks and balances are developed. The second part of the book recognises the incompleteness of the constitutional contract which leaves discretion to the politicians selected by the electoral process. Asymmetric information associates information rents with economic policies and the political game becomes a game of costly redistribution of those rents. Professor Laffont investigates the trade-offs between an inflexible constitution which leaves little discretion to politicians but sacrifices ex post efficiency and a constitution weighted towards ex post efficiency but also giving considerable discretion to politicians to pursue private agendas. The final part of the book reconsiders the modeling of collusion given asymmetric information. It proposes a new approach to characterizing incentives constraints for group behaviour when asymmetric information is non-verifiable. This

provides a methodology to characterise the optimal constitutional response to activities of interest groups and to study the design of any institution in which group behavior is important **Encyclopedia of Political Economy** Phillip
