with later chapters considering how these elements have come together in successful reforms of public sector operations A chapter is devoted to the successful use of the private sector based on lessons learnt from failures of private contracts and the need for the application of sound procurement principles The current trend is for a public sector model which benefits from business approaches the so called corporatised public utility Experience since the publication of the first edition in 2007 reinforces the importance of the key elements for sustainable water services This second edition brings the material up to date and with some increased emphasis on public participation in its many forms It refers to the opportunity for progress provided by the UN Declaration of Water and Sanitation as a Human Right but only if it is implemented in a practical and sustainable way Institutional Governance and Regulation of Water Services is aimed at providing an informative source for national and local governments responsible for water policy for water utility managers and for students who will be the policy makers of tomorrow It is a teaching aid for courses on water policy governance and regulation About the Author Michael Rouse is a Distinguished Research Associate at the University of Oxford and manages the Institutional Governance and Regulation module of the University's MSc Course on Water Science Policy and Management He was formerly Head of the Drinking Water Inspectorate in London and has extensive knowledge and experience of water governance and regulation including all aspects of audit and enforcement and the governance issues related to both public sector management and privatisation He has wide knowledge of water technical and operational matters based on his applied research and development background at the Water Research Centre where he spent 9 years as Managing Director Michael has a good understanding of international water matters and advises governments on policy and regulation He is a Past President of the International Water Association He is a visiting professor at Tsinghua University in Beijing and at the Shanghai Academy of Social Science In 2000 he was awarded the CBE Commander of the British Empire for his professional services

Water Resources and Development Clive Agnew, Philip Woodhouse, 2010-11-03 Since the start of the twenty first century there has been an unprecedented focus upon water as a key factor in the future of both society and environment Water management lies at the heart of strategies of development as does the added hazard of climate change Water Resources and Development provides a stimulating interdisciplinary introduction to the role of water resources in shaping opportunities and constraints for development The book begins by charting the evolution of approaches to water management It identifies an emerging polarization in the late twentieth century between technical and social strategies In the past decade these two axes of policy debate have been further intersected by discussion of the scale at which management decisions should be made the relative effectiveness of global and local governance of water A variety of case studies elaborate this analytical framework exemplifying four key development challenges economic growth poverty reduction competition and conflict over water and adaptation to climate change Current best practice for water management is examined addressing strategies of water supply augmentation the ecological implications of intensified use and strategies of demand management guided by

economic or political principles It is argued defining successful water management and best practice requires first the establishment of development goals and the implicit trade offs between water consumption and conservation This engaging and insightful text offers a unique interdisciplinary analysis by integrating scientific engineering social and political perspectives This is an essential text for courses on development studies geography earth sciences and the environment
