as a human right specify the technological resources and institutional frameworks necessary for exercising that right and address some of the challenges following from digitalization that currently confront citizens national regulators and international agencies Among the issues covered are public access to information archives past and present local and global networks of communication as sources of personal identities and imagined communities the ongoing reconfiguration of the press as a fourth branch of governance and privacy as a precondition for individuals and collectives to live their lives according to plans and to make their own histories The book will be of interest to students and researchers in media and communication studies cultural studies political philosophy and ethics and interdisciplinary fields examining the ethical and political implications of new information and communication infrastructures *Contact with Reality* Esther Lightcap Meek, 2017-05-05 Is knowledge discovered or just invented Can we ever get outside ourselves to know how reality is in itself independent of us Philosophical realism raises the question whether in our knowing we connect with an independent reality or only connect with our own mental constructs Far from being a silly parlor game the question impacts our lives concretely and deeply Modern Western culture has been infected with antirealism and the doubt skepticism subjectivism relativism and atheism that attends it not to mention distrust and arbitrary mis use of reality Premier scientist turned philosopher Michael Polanyi stepped aside from research to offer an innovative account of knowing that takes its cue from how discovery actually happens Polanyi defied the antirealism of the twentieth century sounding a ringing note of hope in his repeated claim that in discovery we know we have made contact with reality because we have a sense of the possibility of indeterminate future manifestations And that sense marks contact with reality because it is the way reality is abundant generous and fraught with as yet unnameable possibilities This book examines that distinctive claim contrasting it to the wider philosophical discussions regarding realism and antirealism in the recent decades It shows why Polanyi s outlook is superior and why that matters not just to scientific discoverers but to us all **Christopraxis** Andrew Root, 2014 Finding practical theology not always able to present frameworks for understanding concrete and lived experience with divine action Andrew Root s Christopraxis seeks to reset the edifice of practical theology on a new foundation While not minimizing its commitment to the lived and concrete Root argues that practical theology has neglected deeper theological underpinnings Root seeks to create a practical theology that is properly and fully theological post postmodern post Aristotelian and that attends to doctrines such as divine action and justification **Farewell to Reason** Paul Feyerabend, 2020-05-05 Farewell to Reason offers a vigorous challenge to the scientific rationalism that underlies Western ideals of progress and development whose damaging social and ecological consequences are now widely recognized For all their variety in theme and occasion the essays in this book share a consistent philosophical purpose Whether discussing Greek art and thought vindicating the church s battle with Galileo exploring the development of quantum physics or exposing the dogmatism of Karl Popper Feyerabend defends a relativist and historicist notion of the sciences The appeal to reason he insists is empty and must be replaced by a notion of science

that subordinates it to the needs of citizens and communities Provocative polemical and rigorously argued Farewell to Reason will infuriate Feyerabend's critics and delight his many admirers **Hegelianism and Personality** Andrew Seth, 1887 Cybersemiotics Soren Brier, 2008-05-10 A growing field of inquiry biosemiotics is a theory of cognition and communication that unites the living and the cultural world What is missing from this theory however is the unification of the information and computational realms of the non living natural and technical world Cybersemiotics provides such a framework By integrating cybernetic information theory into the unique semiotic framework of C S Peirce Soren Brier attempts to find a unified conceptual framework that encompasses the complex area of information cognition and communication science This integration is performed through Niklas Luhmann's autopoietic systems theory of social communication The link between cybernetics and semiotics is further an ethological and evolutionary theory of embodiment combined with Lakoff and Johnson's philosophy in the flesh This demands the development of a transdisciplinary philosophy of knowledge as much common sense as it is cultured in the humanities and the sciences Such an epistemological and ontological framework is also developed in this volume Cybersemiotics not only builds a bridge between science and culture it provides a framework that encompasses them both The cybersemiotic framework offers a platform for a new level of global dialogue between knowledge systems including a view of science that does not compete with religion but offers the possibility for mutual and fruitful exchange Is Rational Choice Theory All of Social Science?
