Reason Regulation Realism Towards A Regulatory Systems Theory Of Reason And Evolutionary Epistemology:

Reason, Regulation, and Realism Clifford Alan Hooker, 1995-01-01 This book develops a new naturalist theory of reason and scientific knowledge from a synthesis of philosophy and the new sciences of complex adaptive systems In particular the theory of partially self organizing regulatory systems is now emerging as central to all the life and social sciences and this book shows how these ideas can be used to illuminate and satisfyingly reconstruct our basic philosophical concepts and principles Evolutionary epistemology provides a unifying subject for the book It is taken as proposing some important commonality between cognitive biological and cognitive epistemic processes Here that commonality is found by embedding both in a common model of complex adaptive system dynamics New reconstructions are offered on the theories of Jean Piaget Karl Popper and Nicholas Rescher which show how their ideas are more deeply illuminated from this perspective in contrast to the formal rationalist interpretations standard among philosophers and scientists

The Evolution of Cultural Entities Michael Wheeler, John Ziman, Margaret A. Boden, 2002-10-03 Since Darwin scholars have noted that cultural entities such as languages laws firms and theories seem to evolve through sequences of variation selection and replication in many ways just like living organisms These essays consider whether modern evolutionary theory can help us to understand the dynamics of different cultural domains

The Certainty of Doubt Miles Fairburn, William Hosking Oliver, 1996 Essays written by Peter Munz s friends and colleagues to celebrate his 75th birthday themes include history the philosophy of history the philosophy of science and the problems of knowledge reflecting Munz s intellectual interests and achievements Back cover

Foundational Issues in Artificial Intelligence and Cognitive Science M.H. Bickhard, L. Terveen, 1996-10-15 The book focuses on a conceptual flaw in contemporary artificial intelligence and cognitive science Many people have discovered diverse manifestations and facets of this flaw but the central conceptual impasse is at best only partially perceived Its consequences nevertheless visit themselves as distortions and failures of multiple research projects and make impossible the ultimate aspirations of the fields The impasse concerns a presupposition concerning the nature of representation that all representation has the nature of

encodings encodingism Encodings certainly exist but encodingism is at root logically incoherent any programmatic research predicted on it is doomed too distortion and ultimate failure The impasse and its consequences and steps away from that impasse are explored in a large number of projects and approaches These include SOAR CYC PDP situated cognition subsumption architecture robotics and the frame problems a general survey of the current research in AI and Cognitive Science emerges Interactivism an alternative model of representation is proposed and examined **Two Sciences of Mind** Seán Ó Nualláin, Paul Mc Kevitt, Eoghan Mac Aogáin, 1997-06-26 The Reaching for Mind workshop held at AISB 95 explicitly addressed itself to the current crisis in Cognitive Science In particular the issue of how this discipline can address consciousness was a leitmotiv in the workshop The conclusion seems inescapable that there is a need for two sciences in this area Cognitive Science can be freed to become a fully fledged experimental epistemology by the creation of a science of consciousness also encompassing subjectivity This exciting collection of papers indicates where both these sciences may be heading Series B The programme committee of the workshop included Mike Brady Oxford Daniel Dennett Tufts Jerry Feldman Berkeley John Macnamara McGill and Zenon Pylyshyn Rutgers **Einstein Meets Magritte: An Interdisciplinary Reflection** Diederik Aerts, Jan Broekaert, Ernest Mathijs, 2012-12-06 Einstein Meets Magritte An Interdisciplinary Reflection presents insights of the renowned key speakers of the interdisciplinary Einstein meets Magritte conference 1995 Brussels Free University The contributions elaborate on fundamental questions of science with regard to the contemporary world and push beyond the borders of traditional approaches All of the articles in this volume address this fundamental theme but somewhere along the road the volume expanded to become much more than a mere expression of the conference s dynamics The articles not only deal with several scientific disciplines they also confront these fields with the full spectrum of contemporary life and become new science As such this volume presents a state of the art reflection of science in the world today in all its diversity The contributions are accessible to a large audience of scientists students educators and everyone who wants to keep up with science today Science Bought and Sold Philip Mirowski, Esther-Mirjam Sent, 2002-01-03 From essays examining economic welfare to the idea of scientists as agents to the digital aspects of higher education presents a comprehensive overview of the new directions of this expanding area *Daniel Dennett* Andrew Brook, Don Ross, 2002-01-21 Contemporary Philosophy in Focus will offer a series of introductory volumes of newly commissioned essays to many of the dominant philosophical thinkers of the current age Author of books such as Consciousness Explained and Darwin s Dangerous Idea Daniel C Dennett has reached a huge general and professional audience that extends beyond philosophy to the study of consciousness the development of the child s mind cognitive ethnology explanation in the social sciences artificial intelligence and evolutionary theory This volume is the only truly introductory collection that explores the implications of Dennett s work Natural Moralities David B Wong, 2009-03-03 In this book David B Wong defends an ambitious and important new version of moral relativism He does not espouse the type of

relativism that says anything goes but he does start with a relativist stance against alternative theories such that there need not be only one universal truth Wong proposes that there can be a plurality of true moralities existing across different traditions and cultures all with one core human question as to how we can all live together

Natural Moralities : A Defense of Pluralistic Relativism Department of Philosophy Duke University David B. Wong Professor and Chair,2006-09-07 David B Wong proposes that there can be a plurality of true moralities moralities that exist across different traditions and cultures all of which address facets of the same problem how we are to live well together Wong examines a wide array of positions and texts within the Western canon as well as in Chinese philosophy and draws on philosophy psychology evolutionary theory history and literature to make a case for the importance of pluralism in moral life and to establish the virtues of acceptance and accommodation Wong s point is that there is no single value or principle or ordering of values and principles that offers a uniquely true path for human living but variations according to different contexts that carry within them a common core of human values We should thus be modest about our own morality learn from other approaches and accommodate different practices in our pluralistic society

Integrating Evolution and Development Roger Sansom,Robert N. Brandon,2007 The chapters in Integrating Evolution and Development not only make a cse for the importance of developmental synthesis they also make significant contributions to this fast growing field of study

Neurophilosophy at Work Paul Churchland,2007-04-09 Churchland explores the unfolding impact of the several empirical sciences of the mind especially cognitive neurobiology and computational neuroscience on a variety of traditional issues central to the discipline of philosophy Representing Churchland s most recent research they continue his research program launched over thirty years ago which has evolved into the field of neurophilosophy Topics such as the nature of Consciousness the nature of cognition and intelligence the nature of moral knowledge and moral reasoning neurosemantics or world representation in the brain the nature of our subjective sensory qualia and their relation to objective science and the future of philosophy itself are here addressed in a lively graphical and accessible manner Throughout the volume Churchland s view that science is as important as philosophy is emphasised Several of the color figures in the volume will allow the reader to perform some novel phenomenological experiments on his her own visual system

Natural Ethical Facts William D. Casebeer,2001 Naturalizing ethics has been a problematic philosophic enterprise The author attempts a synoptic reconciliation of the sciences with a naturalized conception of morality beginning with a Quinean refutation of the naturalistic fallacy and the open question argument We can improve our understanding of the nature of moral theory and its place in moral judgment by treating morality as a natural phenomenon subject to constraints from and ultimately reduced to the cognitive and biological sciences Treating morality as a mafter of proper biological function partially fixed by our evolutionary history and with an emphasis on skillful action in the world know how sheds light on the underlying native connectionist architecture of moral cognition The author discusses practical implications regarding the nature and form of

our collective character development institutions and our methods for moral reasoning that arise from this approach reaffirming Deweyian and Aristotelian points about the importance of sociability friendship and liberal democratic forms of social organization for human flourishing

Evolutionary Psychology Steven J. Scher, Frederick Rauscher, 2003 Evolutionary psychology has been dominated by one particular method for studying the mind and behavior This is the first book to both question that monopoly and suggest a broad range of particular alternatives Psychologists philosophers biologists anthropologists and others offer different methods for combining psychology and evolution They recommend specific changes to evolutionary psychology using a wide variety of theoretical assumptions In addition some essays analyze the underpinnings of the dominant method relate it to the context of evolutionary and psychological theory and to general philosophy of science and discuss how to test approaches to evolutionary psychology The aim of this collection is not to reject evolutionary psychology but to open up new vistas which students and researchers can use to ensure that evolutionary psychology continues to thrive

Science Without Laws Ronald N. Giere, 1999-06 Science without Laws thus stakes out a middle ground in these debates by demonstrating a more powerful way of seeing science

BOOK JACKET

How to Know Stephen Hetherington, 2011-03-08 Some key aspects of contemporary epistemology deserve to be challenged and How to Know does just that This book argues that several long standing presumptions at the heart of the standard analytic conception of knowledge are false and defends an alternative a practicalist conception of knowledge Presents a philosophically original conception of knowledge at odds with some central tenets of analytic epistemology Offers a dissolution of epistemology's infamous Gettier problem explaining why the supposed problem was never really a problem in the first place Defends an unorthodox conception of the relationship between knowledge that and knowledge how understanding knowledge that as a kind of knowledge how

Against Essentialism Stephan Fuchs, 2009-07 Against Essentialism presents a sociological theory of culture This interdisciplinary and foundational work deals with basic issues common to current debates in social theory including society culture meaning truth and communication Stephan Fuchs argues that many mysteries about these concepts lose their mysteriousness when dynamic variations are introduced Fuchs proposes a theory of culture and society that merges two core traditions American network theory and European Luhmannian systems theory His book distinguishes four major types of social observers encounters groups organizations and networks Society takes place in these four modes of association Each generates levels of observation linked with each other into a culture the unity of these observations Against Essentialism presents a groundbreaking new approach to the construction of society culture and personhood The book invites both social scientists and philosophers to see what happens when essentialism is abandoned

Representations of Space and Time Donna J. Peuquet, 2002-06-20 Recent advances in information technology have enabled scientists to generate unprecedented amounts of earth related data with tremendous potential for dealing with pressing social economic and environmental issues Yet the volume and heterogeneity of available

data clearly overwhelm traditional analytical approaches as well as the human capacity to derive patterns and useful insights. This book examines how geospatial knowledge can be analyzed and represented in a manner that not only is accurate and coherent but also makes intuitive sense to the end user. Integrating concepts and approaches from geography, computer science, cognitive psychology, and philosophy, Donna J. Peuquet explores the processes by which people acquire, represent, and utilize spatiotemporal knowledge. Arguing that the human user and the computer must be viewed as interrelated components of a single system, she provides principles and recommendations for improving the design of geographic information systems, GIS, and other geospatial modeling tools. An ideal student text or professional reference, this book fills a crucial need in geographic information science.

Plato's Camera Paul M. Churchland, 2012-01-20. A noted philosopher draws on the empirical results and conceptual resources of cognitive neuroscience to address questions about the nature of knowledge. In *Plato's Camera*, eminent philosopher Paul Churchland offers a novel account of how the brain constructs a representation or takes a picture of the universe's timeless categorical and dynamical structure. This construction process, which begins at birth, yields the enduring background conceptual framework with which we will interpret our sensory experience for the rest of our lives. But as even Plato knew, to make singular perceptual judgments requires that we possess an antecedent framework of abstract categories to which any perceived particular can be relevantly assimilated. How that background framework is assembled in the first place is the motivating mystery and the primary target of Churchland's book. Unexpectedly, this neurobiologically grounded account of human cognition also provides a systematic story of how such low-level epistemological activities are integrated within an enveloping framework of linguistic structures and regulatory mechanisms at the social level. As Churchland illustrates, this integration of cognitive mechanisms at several levels has launched the human race on an epistemological adventure denied to all other terrestrial creatures.
