Recent Advances In Algorithms And Combinatorics:

Recent Advances in Algorithms and Combinatorics Bruce A. Reed, Claudia L. Linhares-Sales, 2006-05-17 Combinatorics is one of the fastest growing fields of mathematics. In large measure this is because many practical problems can be modeled and then efficiently solved using combinatorial theory. This real world motivation for studying algorithmic combinatorics has led not only to the development of many software packages but also to some beautiful mathematics which has no direct application to applied problems. In this volume we highlight some exciting recent developments in algorithmic combinatorics. Most practical applications of algorithmic combinatorics would be possible without the use of the computer. As computers become ever more powerful more and more applications become possible. Computational biology is one example of a relatively new field in which algorithmic combinatorics plays a key role. The chapter by Sagot and Wakabayashi in this volume discusses how combinatorial tools can be used to search for patterns in DNA and protein sequences. The information technology revolution has not only allowed for the solution of practical problems using combinatorial techniques it has also been the source of many new combinatorial problems. One example is radio channel assignment. In this problem we have a number of transmitters each of which must handle a number of calls. Each call must be assigned a frequency in such a way that interference is avoided thus calls handled by the same transmitter are assigned different frequencies as are calls handled by transmitters which are near each other. The explosive growth in the use of the frequency spectrum due to e.g. mobile telephone networks has made it a very valuable resource.

Recent Advances in Algorithms and Combinatorics Bruce A. Reed, 2003 Excellent authors such as Lovasz one of the five best combinatorialists in the world. Thematic linking that makes it a coherent collection. Will appeal to a variety of communities such as mathematics, computer science and operations research.
