Receptor Mediated Targeting Of Drugs:

Receptor-Mediated Targeting of Drugs G. Gregoriadis, 2013-06-29 Conventional attempts to control cell behaviour and function are often marred by the toxicity of the drugs used their premature waste or inactivation or by their inability to interact with or reach target sites efficiently New trends in pharmacology emphasize the development of methods for the optimization of drug action for instance by the delivery of drugs enzymes hormones antigens genetic material etc through carrier systems selectively to relevant cellular and subcellular sites A wide assortment of carriers was discussed in the first NATO Advanced Studies Institute ASI Targeting of Drugs the proceedings of which were published by Plenum Press in 1982 eds G Gregoriadis J Senior and A Trouet This book containing the proceedings of the 2nd NATO ASI Receptor Mediated Targeting of Drugs held again at Cape Sounion Greece during 20 June 1 July 1983 deals with drug delivery through systems possessing ligands which can recognize and interact with receptors on the target's surface Receptor recognizing carriers that have recently given promise of realistic expectations in targeting include monoclonal antibodies certain proteins that home to specific cells in the body and liposomes either as such when they can trigger specific reactions in the reticuloendothelial system or in association with targeting macromolecules Each of these are discussed extensively by leading authorities in terms of applications in biology and medicine and related methodologies

Targeted Intracellular Drug Delivery by Receptor Mediated Endocytosis Padma V. Devarajan, Prajakta Dandekar, Anisha A. D'Souza, 2019-11-09 This book elaborates on drug delivery targeting via intracellular delivery specifically through the Receptor Mediated Endocytosis RME approach due to the involvement of cellular receptors in various grave diseases Targeted delivery relies on two basic approaches passive and active targeting While passive targeting approaches have shown great promise the improved selectivity achieved with active targeting approaches has resulted in significantly higher efficacy Interestingly there are numerous strategies for active targeting many of which are already highlighted in Targeted Drug Delivery Concepts and Applications Nevertheless an exciting and practical strategy for active targeting which could enable high intracellular delivery is through exploitation of RME Cells in the body express receptors to enable various physiological and biochemical processes As a result many of these receptors are overexpressed in pathological conditions or newer receptors expressed due to defective cellular functioning RME is based on exploitation of such receptors to achieve intracellular delivery While targeted delivery can have manifold applications in this book we focus on two major and challenging therapeutic areas i Cancer and ii Infectious Diseases Targeted Intracellular Drug Delivery by Receptor Mediated Endocytosis discusses the major receptors that are useful for targeted delivery for these afflictions A major section of this book is dedicated to details regarding their occurrence and location the recognition domain of the receptor structure activity relationship of substrate ligand for selective binding ligands explored antagonists for ligand binding and relevance of these aspects for therapy of

cancer and infectious diseases These facets are elucidated with the help of specific examples from academic research and also emphasize commercial products wherever relevant In vitro cellular models relied on for assessing receptor mediated cellular targeting and in vivo models depicting clinical efficacy are focused on in a separate section Finally we briefly discuss the regulatory and toxicity issues that may be associated specifically with the RME approach of intracellular drug delivery

Targeting of Drugs With Synthetic Systems Gregory Gregoriadis, Judith Senior, George Poste, 2013-03-09 Targeting of drugs via carrier systems to sites in the body in need of pharmacologic intervention is a rapidly growing area of research in the treatment or prevention of disease It has evolved from the need to preferentially deliver drugs enzymes vitamins hormones antigens etc to target cells and organs so as to avoid toxicity waste of drugs through premature secretion or inactivation and at the same time render treatment more convenient and cost effective A wide assortment of naturally occurring or semi synthetic drug carriers e g antibodies glycoproteins lectins peptide hormones cells and liposomes their interaction with relevant receptors and mediation of optimal pharmacological action were discussed in the two previous NATO Advanced Studies Institutes ASI of this series Targeting of Drugs and Receptor Mediated Targeting of Drugs the proceedings of which were published by Plenum in 1982 and 1984 respectively This book contains the proceedings of the 3rd NATO ASI Targeting of Drugs with Synthetic Systems held as before at Cape Sounion Greece during 24 June 5 July 1985 It deals mostly with man made carriers such as a variety of polymers matrices liposomes and other colloidal micro particles The twenty chapters discuss the interaction of such carriers with the biological milieu approaches to bypass the reticuloendothelial system or when needed take advantage of its interception of carriers to optimally deliver drugs to phagocytes and ways to improve delivery to specific cells often with the help of carrier linked ligands *Targeting of Drugs 4* Gregory

Gregoriadis, Brenda McCormack, George Poste, 2013-11-11 The NATO Advanced Studies Institute series Targeting of Drugs was originated in 1981 It is now a major international forum held every two years in Cape Sounion Greece in which the present and the future of this important area of research in drug delivery is discussed in great depth Previous ASIs of the series dealt with drug carriers of natural and synthetic origin their interaction with the biological milieu ways by which the latter influences such interaction strategies by which milieu interference curtailing the function of drug carriers is circumvented and more recently with the application of drug carriers for the delivery of peptides and proteins The present book contains the of the 7th NATO ASI Targeting of Drugs Advances in System Constructs proceedings held in Cape Sounion during 24 June 5 July 1993 As the title implies the book deals with a variety of approaches to carrier design or modification that contribute to optimal carrier function to Mrs Concha Perring for her assistance with the We express our appreciation organization of the ASI We thank Dr G Deliconstantinos who as chairperson of the Local Committee contributed to the success of the Institute The ASI was held under the sponsorship of NATO Scientific Affairs Division and co sponsored and generously financed by SmithKline Beecham Pharmaceuticals King of Prussia Financial assistance was also provided by

Biomedical Aspects of Drug Targeting Vladimir R. Muzykantov, Vladimir P. Torchilin, 2013-03-09 Drugs usually have no natural affinity for the cells tissues and organs where therapeutic effects are needed which frequently results in low efficiency and unwanted side effects This concern is even more profound when using highly potent and cytotoxic anticancer drugs or specific agents such as enzymes and genetic materials since their effective and safe action requires precise cellular or even sub cellular addressing in the target organ To meet safety efficiency and specificity requirements drugs somehow must be targeted to the sites of their expected therapeutic action The idea of the magic bullet or drug

targeting proposed by Erlich a century ago generates great and continuously growing interest in biomedical industrial and financial circles This book is focused on the strategies designed to target therapeutic or diagnostic agents to the disease sites In an attempt to include in this volume the set of chapters reflecting both traditional and emerging areas of drug targeting we have contacted many leading scientists in the field asking for their contributions Their responses were most favorable and encouraging As a result we have succeeded in assembling a series of outstanding contributions reflecting practically all the key areas of drug targeting The final structure of this book is as follows
