Kiefer, N. Ruwet, 2012-12-06 The present volume is intended to give an overall picture of research in progress in the field of generative grammar in various parts of Europe The term generative grammar must however be understood here rather broadly What seemed to be an easily definable technical term several years ago is becoming more and more vague and imprecise Research in generative grammar is carried on according to rather diversified methodological principles and being a generative grammarian is often more a matter of confession than any adherence to the common line of methodology which can be traced back to the conception of grammatical description initiated by Noam Chomsky The direct or indirect influence of this conception is however clearly recognizable in most of the papers of this volume The most difficult thing was naturally enough to select appropriate papers in the realm of semantics Apart from the special trend in generative grammar referred to as generative semantics though here too we might ponder on what generative really means the term generative is hardly employed in semantics The search for semantic primes the application of the methods of mathematical logic the inquiry into the intricate relationships between syntax and semantics and the utilization of syntactic information in semantics are perhaps the most characteristic traits of contemporary semantics All of this of course is at no variance with the principles of generative grammar on the contrary most of it has been made possible through the achievements of generative grammar Artificial Intelligence and Intellectual Property Jyh-An Lee, Reto Hilty, Kung-Chung Liu, 2021-02-25 Artificial Intelligence AI has become omnipresent in today's business environment from chatbots to healthcare services to various ways of creating

Copyright and Patent Laws for the Age of Artificial Intelligence Eva Janecková,2025-05-15 This book responds to the need to distinguish human creations from those produced by AI It does so by tracing human attributes of authorship and inventorship in statutory requirements for protection and ownership in European copyright and patent laws Its main contribution lies in exposing shortcomings in how the laws are applied in the UK Germany and France It shows that the human origin of creations is traditionally inferred from their expressive form or technical character Given the advancements in AI such inferences are no longer legitimate What is more these shortcomings may eventually lead to granting copyright or patent protection where none is lawfully permitted or sufficiently justified To remedy the situation this book offers doctrinal and conceptual amendments and proposes law reforms to implement them This book guides authorities practitioners and students through the main arguments of the debate concerning copyright and patents for objects entirely or partly generated by AI It also makes original contributions to advance the ongoing academic and policy debates on AI and intellectual property law

and colours revise and refine everything and finally deliver their design to dressmakers AI accelerates this time consuming and labour intensive process Yet the full legal consequences of AI in fashion industry are often forgotten An AI device s ability to generate fashion designs raises the question of who will own intellectual property rights over the fashion designs Will it be the fashion designer who hires or contracts with the AI programmer Will it be the programmer Will it be the AI itself Or will it be a joint work of humans and computers And who will be liable for infringement deriving from use of third party material in AI generated fashion designs This book explores answers to these questions within the framework of EU design and copyright laws It also crafts a solution proposal based on a three step test and model norms which could be used to unleash the authors rights holders and infringers around AI generated fashion designs
