each other In our love of those we learn from we find our way as individuals and as a species Never before has this intersection of the biology and psychology of childhood been so brilliantly described Nothing in biology makes sense except in the light of evolution wrote Dobzhansky In this remarkable book Melvin Konner shows that nothing in childhood makes sense except in the light of evolution **Congressional Record** United States. Congress,1993 *Principles of Evolution: Systems, Species, and the History of Life* Jonathan Bard,2016-09-12 Principles of Evolution considers evolution in the context of systems biology a contemporary approach for handling biological complexity Evolution needs this systems perspective for three reasons First most activity in living organisms is driven by complex networks of proteins and this has direct implications particularly for understanding evo devo and for seeing how variation is initiated Second it provides the natural language for discussing phylogenetic trees Third evolutionary change involves events at levels ranging from the genome to the ecosystem and systems biology provides a context for integrating material of this complexity Understanding evolution means on the one hand describing the history of life and on the other making sense of the principles that drove that history The solution adopted here is to make the science of evolution the primary focus of the book and place the various parts of the history of life in the context of the research that unpicks it This means that the history is widely distributed across the text This concise textbook assumes that the reader has a fair amount of biological knowledge and gives equal weight to all the major themes of evolution the fossil record phylogenetics evodevo and speciation Principles of Evolution will therefore be an interesting and thought provoking read for honors level undergraduates and graduates working in the biological sciences
