Mondrian 1892-1914 The Path To Abstraction:

Mondrian, 1892-1914 Hans Janssen, Piet Mondrian, Joop M. Joosten, Musée d'Orsay, Kimbell Art Museum, 2002

Mondrian Nicholas Fox Weber, 2024-10-22 THE NEW YORK TIMES BOOK REVIEW EDITORS CHOICE The extraordinary and surprising life of Piet Mondrian whose unprecedented geometric art revolutionized modern painting architecture graphic art fashion design and more from acclaimed cultural historian Nicholas Fox Weber As fastidiously passionate as his subject's paintings How wonderful it is to read of Mondrian's gaiety and zest as well as his rigour and unrelenting commitment to his own absolutely his own view of art and the world John Banville national bestselling author of *The Lock Up* In the early 1920s surrounded by the roaring streets of avant garde Paris Piet Mondrian began creating what would become some of the most recognizable abstract paintings of the 20th century With rectangles of primary colors against a dazzling white background this was geometric abstraction in its purest form These revolutionary compositions exhilarated intoxicated confused and enraged the international public and changed the course of modern art forever Now for the first time Mondrian emerges alongside his thrilling art Here is the life of an elusive modern master from his youth in a religious household in the Netherlands where he first began painting Dutch farmhouses and sand dunes to his move to Paris where he embraced the work of Pablo Picasso Georges Seurat and Cézanne to the 1920s and onward where surviving the turmoil of two world wars and embracing a rapidly shifting culture Mondrian challenged the concept of art and invented a new world of undiluted colors and rhythmic straight lines His work would go on to affect painting architecture fashion and design in decades to come Here is also an intimate portrait of a complex artist his solitude and avoidance of intimacy his eccentricities and his philosophy his passion for ballroom dancing and his unwavering belief in art as a vehicle to reveal universal truths

Exhibiting Abstraction Christina Bartosch, 2025-05-20 The time around 1910 has entered art history as the moment when abstraction was invented However where and when works of non figurative art became present in the public eye has been afforded little attention to date *Exhibiting Abstraction* is the first publication to be devoted entirely to the presentation of abstract art between 1908 and 1915 It uncovers strategies for the dissemination of early abstract painting in exhibitions with the aid of a register of exhibited works by Giacomo Balla Umberto Boccioni Wassily Kandinsky Frantisek Kupka Kazimir Malevich Piet Mondrian and Francis Picabia shown to the public within this period and an analysis of the artists exhibition activities The key role played by art exhibitions in the works introduction and dissemination is highlighted **It's**

Abstraction, Concretely John McGreal, 2017-02-21 John McGreal's three new books *It's Abstraction* *Concretely* *It's* *Figuration* *Groundly* and *It's Representation* Really continue the *It's* Series published by Matador since 2010 They constitute another stage in an artistic journey exploring the visual and audial dialectic of mark word and image that began over 25 years ago Emerging out of the first books on the Bibliograph published in 2016 initiated with *It's Nothing* Seriously these new texts retain some of the same structural features The Bibliographs contain the same focus on repetition and variation in

meaning of their dominant motifs of representation abstraction and figuration which have framed philosophical discourse on epistemology and ontology in aesthetics their chance placement in each Bibliograph interspersed with one another displaying and enhancing similarities and differences At the same time these works constitute a development in the aesthetic form of the Bibliograph In earlier works on Nothing Absence and Silence it was just a question of finding and transferring given textual references from their source to construct their Bibliographs with the focus being on the strategic position of the latter within each book In these new works the concern has been with working on the line and shape of the references themselves with their enhanced spacial form as well as that of each Bibliograph as a whole In shaping and spacing the referential images the place of words and letters became as important as their semantic to read in a new way on diverse contemporary issues across conventional boundaries in the arts and sciences at several levels of physical psychical and social reproduction

Conceptual Revolutions in Twentieth-Century Art David W. Galenson, 2009-09-14 From Picasso's Cubism and Duchamp's readymades to Warhol's silkscreens and Smithson's earthworks the art of the twentieth century broke completely with earlier artistic traditions A basic change in the market for advanced art produced a heightened demand for innovation and young conceptual innovators from Picasso and Duchamp to Rauschenberg and Warhol to Cindy Sherman and Damien Hirst responded not only by creating dozens of new forms of art but also by behaving in ways that would have been incomprehensible to their predecessors Conceptual Revolutions in Twentieth Century Art presents the first systematic analysis of the reasons for this discontinuity David W Galenson whose earlier research has changed our understanding of creativity combines social scientific methods with qualitative analysis to produce a fundamentally new interpretation of modern art that will give readers a far deeper appreciation of the art of the past century and of today than is available elsewhere

Mathematics and Art Lynn Gamwell, 2016 This is a cultural history of mathematics and art from antiquity to the present Mathematicians and artists have long been on a quest to understand the physical world they see before them and the abstract objects they know by thought alone Taking readers on a tour of the practice of mathematics and the philosophical ideas that drive the discipline Lynn Gamwell points out the important ways mathematical concepts have been expressed by artists Sumptuous illustrations of artworks and cogent math diagrams are featured in Gamwell's comprehensive exploration Gamwell begins by describing mathematics from antiquity to the Enlightenment including Greek Islamic and Asian mathematics Then focusing on modern culture Gamwell traces mathematicians search for the foundations of their science such as David Hilbert's conception of mathematics as an arrangement of meaning free signs as well as artists search for the essence of their craft such as Aleksandr Rodchenko's monochrome paintings She shows that self reflection is inherent to the practice of both modern mathematics and art and that this introspection points to a deep resonance between the two fields Kurt G del posed questions about the nature of mathematics in the language of mathematics and Jasper Johns asked What is art in the vocabulary of art Throughout Gamwell describes the personalities and cultural environments of a multitude

of mathematicians and artists from Gottlob Frege and Beno t Mandelbrot to Max Bill and Xu Bing Mathematics and Art demonstrates how mathematical ideas are embodied in the visual arts and will enlighten all who are interested in the complex intellectual pursuits personalities and cultural settings that connect these vast disciplines **A Guided Science**

Jaan Valsiner,2017-07-05 That sciences are guided by explicit and implicit ties to their surrounding social world is not new Jaan Valsiner fills in the wide background of scholarship on the history of science the recent focus on social studies of sciences and the cultural and cognitive analyses of knowledge making The theoretical scheme that he uses to explain the phenomena of social guidance of science comes from his thinking about processes of development in general his theory of bounded indeterminacy and on the relations of human beings with their culturally organized environments Valsiner examines reasons for the slow and nonlinear progress of ideas in psychology as a science at the border of natural and social sciences Why is that intellectual progress occurs in different countries at different times Most responses are self serving blinders for presenting science as a given rather than understanding it as a deeply human experience For Valsiner scientific knowledge is cultural at its core Major changes have occurred in contemporary sciences collective authorship fragmentation of knowledge into small quickly published and equally quickly retractable journal articles and the counting of numbers of such articles by institutions as if that is a measure of scientific productivity Scientists are inherently ambivalent about the benefit of these changes for the actual development of knowledge There is a gradual takeover of the domain of scientific knowledge creation by other social institutions with vested interests in defending and promoting knowledge that serves their social interests Sciences are entering into a new form of social servitude Art Guide Texas Rebecca S.
