highlighting pivotal research It outlines the extent to which basic and applied biomedical scientists clinicians modelers and others strive to understand the extent of these threats and provide intellectual and materiel options to mitigate these risks This book summarizes major Army research efforts to quantify and model military relevant physiology These chapters highlight the translation of this research into useful predictive tools The tools are of importance to medical planners materiel developers commanders and in many cases every soldier These chapters detail the experimental basis for many of the predictive tools that are currently in use This book is written for military clinicians and medical researchers who may be reasonably expected to explain some of the background as well as those who will extend the research Many people will find this book interesting because it details research on topics that affect everyone in everyday life including how we sleep eat and exercise as well as more specific topics such as the effects of caffeine on performance risks associated with laser pointers and even Army blast models that have influenced safety thresholds for car airbag deployments

Nutrient Composition of Rations for Short-Term, High-Intensity Combat Operations Institute of Medicine, Food and Nutrition Board, Committee on Military Nutrition Research, Committee on Optimization of Nutrient Composition of Military Rations for Short-Term, High-Stress Situations, 2006-01-09 Recognizing the importance of good nutrition for physical and mental status the Department of Defense asked the Institute of Medicine to guide the design of the nutritional composition of a ration for soldiers on short term high stress missions Nutrient Composition of Rations for Short Term High Intensity Combat Operations considers military performance health concerns

food intake energy expenditure physical exercise and food technology issues The success of military operations depends to a large extent on the physical and mental status of the individuals involved Appropriate nutrition during assault missions is a continuous challenge mainly due to diminished appetites of individuals under stress Many less controllable and unpredictable factors such as individual preferences and climate come into play to reduce appetite In fact soldiers usually consume about half of the calories needed leaving them in a state called negative energy balance The consequences of being in negative energy balance while under these circumstances range from weight loss to fatigue to mental impairments An individual's physiological and nutritional status can markedly affect one's ability to maximize performance during missions and may compromise effectiveness With the number of these missions increasing the optimization of rations has become a high priority

Mineral Requirements for Military Personnel Institute of Medicine, Food and Nutrition Board, Committee on Military Nutrition Research, Committee on Mineral Requirements for Cognitive and Physical Performance of Military Personnel, 2006-07-21 The U S Army Health Risk Appraisal group surveyed 400 000 active duty U S Army personnel in the late 1990s to determine whether or not those personnel met the dietary objectives of Healthy People 2000 HP2000 a national agenda for health promotion and disease prevention As reported by Yore et al 2000 Army personnel generally did not meet the HP2000 goals for nutrition even though significant progress had been made during 1991 1998 Although the specific aspects of diet that would be relevant to this Committee on Mineral Requirements for Cognitive and Physical Performance of Military Personnel are lacking the findings from this survey suggest that there are dietary problems in the military population The potential for adverse effects of marginal mineral deficiencies among soldiers engaged in training or military operations and the prospect of improving military performance through mineral intakes have spurred the military's interest in this area of nutrition Mineral Requirements for Military Personnel provides background information on the current knowledge regarding soldiers' eating behaviors as well as on the physical and mental stress caused by military garrison training or operations This report also offers facts on the mineral content of rations and its intake by military personnel and addresses the potential effects of nutrient deficiencies due to inadequate intake or higher requirements during military operations Mineral Requirements for Military Personnel provides information and recommendations on the development and uses of MDRIs and a description of strategies to increase intake of specific minerals whether via usual foods fortification or supplementation This report features a description of the metabolism and needs for selected minerals by military personnel under garrison training recommendations on mineral intake levels and an assessment of mineral level adequacy in operational rations This report also includes a prioritization of the research needed to answer information gaps and details of study designs required to gain such information

Measuring Health From The Inside Carolyn Hodges Chaffee, Annika Kahm, MS, 2015-11-06 Carolyn and Annika bring decades of expertise in the care of patients with Anorexia Bulimia Binge Eating Disorder and the many related atypical and subsyndromal variants Their clinical wisdom understanding of the

experience of sufferers and those who love them and understanding of these illnesses and the recovery process infuse these pages Diane Mickley MD Director Wilkins Center for Eating Disorders The ever changing field of eating disorder treatment needs innovative new techniques and approaches As the number of people with these challenging disorders increases at an alarming rate treatment has not kept pace The death rate for Anorexia Nervosa in the U S is twelve times higher than all other leading causes of death combined for the 15 to 24 age group Measuring Health from the Inside is a major step forward in treating patients with eating disorders This important book explains how two simple measurement techniques Metabolic Testing and Body Composition Analysis can help patients make rapid progress in understanding their condition and tracking their progress toward recovery Thousands of patients have been successfully diagnosed and treated by this technology at Carolyn s clinic and Annika s private practice In Measuring Health from the Inside they explain how the information from the tests can be used to help treat patients not only for their underlying eating disorder but also for the malnutrition that almost always accompanies and worsens the condition Based on their extensive experience they offer practical guidance for therapists patients and loved ones on the often overlooked importance of nutrition in treating eating disorders

Weapons- and Dual-Use Technologies Margaret E. Kosal, 2021-07-26 This book explores and analyzes the rapid pace of technological evolution in diplomatic information military and economic sectors which has contributed to a dynamic international policy environment Global political stability is greatly influenced by innovations originating from numerous sources including university labs the technology sector and military research Collectively these innovations guide the movement of people ideas and technology that in turn affect the international balance of power The objective of this volume is to develop new insights into how the proliferation of innovative ideas low cost weapons and dual use technologies impact the changing global security landscape Innovative and dual use technologies can be used for beneficial purposes or defensive purposes Alternatively they may be appropriated or employed for nefarious purposes by hostile military powers and non state actors alike Such actions can threaten global security and stability As the complexity of technological innovations continues to increase existing control mechanisms such as international regulations and security arrangements may be insufficient to stem the tide of proliferation over time As such this work seeks to assess and present policy solutions to curtail the threat to global stability posed by the proliferation of weapons and dual use technology

Chemistry in Microelectronics Yannick Le Tiec, 2013-02-28 Chemistry in Microelectronics Microelectronics is a complex world where many sciences need to collaborate to create nano objects we need expertise in electronics microelectronics physics optics and mechanics also crossing into chemistry electrochemistry as well as biology biochemistry and medicine Chemistry is involved in many fields from materials chemicals gases liquids or salts the basics of reactions and equilibrium to the optimized cleaning of surfaces and selective etching of specific layers In addition over recent decades the size of the transistors has been drastically reduced while the functionality of circuits has increased This book consists of five chapters covering the chemicals and sequences used in processing from cleaning to etching the role and impact of their purity along with the materials used in Front End Of the Line which corresponds to the heart and performance of individual transistors then moving on to the Back End Of the Line which is related to the interconnection of all the transistors Finally the need for specific functionalization also requires key knowledge on surface treatments and chemical management to allow new applications
