Father Nature James K. Rilling,2024-10-01 How and why human males evolved the capacity to be highly involved caregivers and why some are more involved than others We all know the importance of mothers They are typically as paramount in the wild as they are in human relationships But what about fathers In most mammals including our closest living primate relatives fathers have little to no involvement in raising their offspring and sometimes even kill the offspring sired by other fathers How then can we explain modern fathers having the capacity to be highly engaged parents In Father Nature James Rilling explores how humans have evolved to endow modern fathers with this potential and considers why this capacity evolved in humans Paternal caregiving is advantageous to children and by extension to society at large yet variable both across and within human societies Rilling considers how to explain this variability and what social and policy changes might be implemented to increase positive paternal involvement Along the way Father Nature also covers the impact fathers have on children s development the evolution of paternal caregiving how natural selection adapted male physiology for caregiving and finally what lessons an expecting father can take away from the book as well as what benefits they themselves get from raising children including increased longevity and younger brains A beautifully written book by a father himself Father Nature is a much needed and deeply rewarding look at the science behind good paternal behavior in humans

Sensing in Nature Carlos López-Larrea,2012-03-07 Biological systems are an emerging discipline that may provide integrative tools by assembling the hierarchy of interactions among genes proteins and molecular networks involved in sensory systems The aim of this volume is to provide a picture as complete as possible of the current state of knowledge of sensory systems in nature The presentation in this book lies at the intersection of evolutionary biology cell and molecular biology physiology and genetics Sensing in Nature is written by a distinguished panel of

specialists and is intended to be read by biologists students scientific investigators and the medical community *Nature*

James Young Simpson,1929 This volume is based upon the sixth series of lectures delivered at Yale University on the Foundation established by the late Dwight H Terry of Plymouth Connecticut through his gift of an endowment fund for the delivery and subsequent publication of Lectures on Religion in the Light of Science and Philosophy The deed of gift declares that the object of this Foundation is not the promotion of scientific investigation and discovery but rather the assimilation and interpretation of that which has been or shall be hereafter discovered and its application to human welfare especially by the building of the truths of science and philosophy into the structure of a broadened and purified religion THE EMERGENCE AND NATURE OF HUMAN HISTORY Volume One Joseph Miller,2012-07-29 This book attempts to define the issues that face us in trying to understand the often overwhelming complexity of the human experience It is intellectually challenging broad in its scope richly detailed and densely argued It is the first in a projected series of five volumes in which the author will seek to touch on every aspect of human historical reality and all the multitudinous variables that have shaped it

The Nature of Language Dieter Hillert,2014-04-30 The Nature of Language addresses one of the most fundamental questions of mankind how did language evolve and what are the neurobiological and cognitive foundations of language processing These questions are explored from different perspectives to discuss the building blocks of language evolution and how they developed in the way they can be found in modern humans Primarily neural mapping methods of cognition presented in this research provide extremely valuable data about the neural circuitries that are involved in language processing Thus the book explores and illustrates cortical mapping in typical language patterns but also cortical mapping in atypical populations that fail to process particular language aspects A neurobiological stance is used to inquire about how language abilities of our species evolved to communicate for the purposes of conveying information such as ideas emotions goals and humor The evolutionary language model presented builds on the cognitive abilities of our ancestors and it allows readers to draw a variety of expansive conclusions from that including the idea that human language as an interface system provides the basis for consciousness

A (Very) Short History of Life on Earth Henry Gee,2021-11-09 The Royal Society s Science Book of the Year A n exuberant romp through evolution like a modern day Willy Wonka of genetic space Gee s grand tour enthusiastically details the narrative underlying life s erratic and often whimsical exploration of biological form and function Adrian Woolfson The Washington Post In the tradition of Richard Dawkins Bill Bryson and Simon Winchester An entertaining and uniquely informed narration of Life s life story In the beginning Earth was an inhospitably alien place in constant chemical flux covered with churning seas crafting its landscape through incessant volcanic eruptions Amid all this tumult and disaster life began The earliest living things were no more than membranes stretched across microscopic gaps in rocks where boiling hot jets of mineral rich water gushed out from cracks in the ocean floor Although these membranes were leaky the environment within them became different from the raging maelstrom beyond These havens of order slowly refined

the generation of energy using it to form membrane bound bubbles that were mostly faithful copies of their parents a foamy lather of soap bubble cells standing as tiny clenched fists defiant against the lifeless world Life on this planet has continued in much the same way for millennia adapting to literally every conceivable setback that living organisms could encounter and thriving from these humblest beginnings to the thrilling and unlikely story of ourselves In *A Very Short History of Life on Earth* Henry Gee zips through the last 4.6 billion years with infectious enthusiasm and intellectual rigor Drawing on the very latest scientific understanding and writing in a clear accessible style he tells an enlightening tale of survival and persistence that illuminates the delicate balance within which life has always existed

Nature and Scope of Biology Dr. Priyanka Gupta Manglik, 2024-08-15 Offers a foundational understanding of biology its subfields historical development and the relevance of biological science in modern society

On Human Nature Jonathan H. Turner, 2020-11-24 In this book Jonathan H Turner combines sociology evolutionary biology cladistic analysis from biology and comparative neuroanatomy to examine human nature as inherited from common ancestors shared by humans and present day great apes Selection pressures altered this inherited legacy for the ancestors of humans termed hominins for being bipedal and forced greater organization than extant great apes when the hominins moved into open country terrestrial habitats The effects of these selection pressures increased hominin ancestors emotional capacities through greater social and group orientation This shift in turn enabled further selection for a larger brain articulated speech and culture along the human line Turner elaborates human nature as a series of overlapping complexes that are the outcome of the inherited legacy of great apes being fed through the transforming effects of a larger brain speech and culture These complexes he shows can be understood as the cognitive complex the psychological complex the emotions complex the interaction complex and the community complex

The Cultural Nature of Attachment Heidi Keller, Kim A. Bard, 2017-10-27 Multidisciplinary perspectives on the cultural and evolutionary foundations of children s attachment relationships and on the consequences for education counseling and policy It is generally acknowledged that attachment relationships are important for infants and young children but there is little clarity on what exactly constitutes such a relationship Does it occur between two individuals infant mother or infant father or in an extended network In the West monotropic attachment appears to function as a secure foundation for infants but is this true in other cultures This volume offers perspectives from a range of disciplines on these questions Contributors from psychology biology anthropology evolution social policy neuroscience information systems and practice describe the latest research on the cultural and evolutionary foundations on children s attachment relationships as well as the implications for education counseling and policy The contributors discuss such issues as the possible functions of attachment including trust and biopsychological regulation the evolutionary foundations if any of attachment ways to model attachment using the tools of information science the neural foundations of attachment and the influence of cultural attitudes

on attachment Taking an integrative approach the book embraces the wide cultural variations in attachment relationships in humans and their diversity across nonhuman primates It proposes research methods for the culturally sensitive study of attachment networks that will lead to culturally sensitive assessments practices and social policies Contributors Kim Bard Marjorie Beeghly Allyson J Bennett Yvonne Bohr David L Butler Nandita Chaudhary Stephen H Chen James B Chisholm Lynn A Fairbanks Ruth Feldman Barbara L Finlay Suzanne Gaskins Valeria Gazzola Ariane Gernhardt Jay Giedd Alma Gottlieb Kristen Hawkes William D Hopkins Johannes Johow Elfriede Kalcher Sommersguter Heidi Keller Michael Lamb Katja Liebal Cindy H Liu Gilda A Morelli Marjorie Murray Masako Myowa Yamakoshi Naomi Quinn Mariano Rosabal Coto Dirk Scheele Gabriel Scheidecker Margaret A Sheridan Volker Sommer Stephen J Suomi Akira Takada Douglas M Teti Bernard Thierry Ross A Thompson Akemi Tomoda Nim Tottenham Ed Tronick Marga Vicedo Leslie Wang Thomas S Weisner Relindis D Yovsi
