Edinburgh Geological Society. Library, 1887 *The Evolution and Classification of the Cretaceous Ammonites and their Jurassic Progenitors* Michael Robert Cooper, 2024-12-03 This book is a unique text that illustrates and describes all the nominal genera of Cretaceous ammonites and their Jurassic progenitors on the basis of their type species There is no judgement as to validity and the authors leaves it to the reader to subjectively recognize or synonymize those taxa as they see fit based on the premises and philosophies to which they ascribe The author argues that the taxonomy offered by the Treatise the fundamental reference work is no longer appropriate and genera need to be redefined according to testable hypotheses The purpose of this book therefore is to redescribe the type species of every nominal genus and to use these to construct a new phylogenetic classification not hampered by preconceived opinion It emphasizes the importance of trifling characters for classification and that taxonomic rank is not optional but is predetermined by evolutionary position A new higher classification is introduced for the group using the higher taxa proposed for the phylogenetic classification of the Bivalvia Hypothesized relationships are depicted by the use of cladograms recognizing these portray only affiliations among the sample and not necessarily close taxonomic bond This book will be of great interest to palaeontologists geologists stratigraphers biogeographers and interested students of geology and paleology It will also make a good addition to universities museums and public libraries **U.S. Geological Survey Bulletin** , 1983 **Cretaceous Climate Events and Short-Term Sea-Level Changes** M. Waple, M.B. Hart, B. Sames, I.O. Yilmaz, 2020 Sea level constitutes a critical planetary boundary for geological processes and human life Sea level fluctuations during major greenhouse phases are still enigmatic and strongly discussed in terms of changing climate systems The geological record of the Cretaceous greenhouse period provides a deep time view on greenhouse phase Earth system processes that facilitates a much better understanding of the causes and consequences of global geologically short term sea level changes In particular Cretaceous hothouse periods can serve as a laboratory to better understand a near future greenhouse Earth This volume presents high resolution sea level records from globally distributed sedimentary archives of the Cretaceous involving a large group of scientists from the International Geoscience Programme IGCP 609 Marine to non marine sedimentary successions were analysed for revised age constraints the correlation of global palaeoclimate shifts and sea level changes tested for climate driven cyclicities and correlated within a high resolution stratigraphic framework of the Geological Timescale For hothouse periods the hypothesis of significant global groundwater related sea level change i.e. aquifer eustasy as a major process is reviewed and substantiated **U.S. Geological Survey Professional Paper** , 1984 **Geological Survey Professional Paper**
