Poison In The Air:

Poison, Medicine, and Disease in Late Medieval and Early Modern Europe Frederick W Gibbs, 2018-07-20 This book presents a uniquely broad and pioneering history of premodern toxicology by exploring how late medieval and early modern c 1200 1600 physicians discussed the relationship between poison medicine and disease Drawing from a wide range of medical and natural philosophical texts with an emphasis on treatises that focused on poison pharmacotherapeutics plague and the nature of disease this study brings to light premodern physicians debates about the potential existence nature and properties of a category of substance theoretically harmful to the human body in even the smallest amount Focusing on the category of poison *venenum* rather than on specific drugs reframes and remixes the standard histories of toxicology pharmacology and etiology as well as shows how these aspects of medicine although not yet formalized as independent disciplines interacted with and shaped one another Physicians argued for instance about what properties might distinguish poison from other substances how poison injured the human body the nature of poisonous bodies and the role of poison in spreading and to some extent defining disease The way physicians debated these questions shows that poison was far from an obvious and uncontested category of substance and their effort to understand it sheds new light on the relationship between natural philosophy and medicine in the late medieval and early modern periods

Toxic Airs James Rodger Fleming, Ann Johnson, 2014-03-23 *Toxic Airs* brings together historians of medicine environmental historians historians of science and technology and interdisciplinary scholars to address atmospheric issues on a spectrum of scales from body to place to planet The chapters analyze airborne and atmospheric threats posed to humans and contributors demonstrate how conceptions of toxicity have evolved and how humans have both created and mitigated toxins in the air Specific topics discussed include medieval beliefs in the pestilent breath of witches malarial theory in India domestic and military use of tear gas Gulf War Syndrome Los Angeles smog automotive emissions control the epidemiological effects of air pollution transboundary air pollution ozone depletion the contributions of contemporary artists to climate awareness and the toxic history of carbon dioxide Overall the essays provide a wide ranging historical study of interest to students and scholars of many disciplines

The Poison Trials Alisha Rankin, 2021-01-22 In 1524 Pope Clement VII gave two condemned criminals to his physician to test a promising new antidote After each convict ate a marzipan cake poisoned with deadly aconite one of them received the antidote and lived the other died in agony In sixteenth century Europe this and more than a dozen other accounts of poison trials were committed to writing Alisha Rankin tells their little known story At a time when poison was widely feared the urgent need for effective cures provoked intense excitement about new drugs As doctors created performed and evaluated poison trials they devoted careful attention to method wrote detailed experimental reports and engaged with the problem of using human subjects for fatal tests In reconstructing this history Rankin reveals how the antidote trials generated extensive engagement with experimental thinking long before the great experimental boom of the

seventeenth century and investigates how competition with lower class healers spurred on this trend The Poison Trials sheds welcome and timely light on the intertwined nature of medical innovations professional rivalries and political power

Doctoring the Black Death John Aberth,2021-09-15 The Black Death of the late Middle Ages is often described as the greatest natural disaster in the history of humankind More than fifty million people half of Europe s population died during the first outbreak alone from 1347 to 1353 Plague then returned fifteen more times through to the end of the medieval period in 1500 posing the greatest challenge to physicians ever recorded in the history of the medical profession This engrossing book provides the only comprehensive history of the medical response to the Black Death over time Leading historian John Aberth has translated many unknown plague treatises from nine different languages that vividly illustrate the human dimensions of the horrific scourge He includes doctors remarkable personal anecdotes showing how their battles to combat the disease which often afflicted them personally and the scale and scope of the plague led many to question ancient authorities Dispelling many myths and misconceptions about medicine during the Middle Ages Aberth shows that plague doctors formulated a unique and far reaching response as they began to treat plague as a poison a conception that had far reaching implications both in terms of medical treatment and social and cultural responses to the disease in society as a whole

guide to living a purposeful and empowered life **Smokefree** Simone Dennis,2020-05-27 Although tobacco is a legal substance many governments around the world have introduced legislation to restrict smoking and access to tobacco products Smokefree critically examines these changes from the increasing numbers of places being designated as smokefree to changes in cigarette packaging and the portrayal of smoking in popular culture Unlike existing texts this book neither advances a public health agenda nor condemns the erosion of individual rights Instead Simone Dennis takes a classical anthropological approach to present the first agenda free full length study of smoking Observing and analysing smoking practices and environments she investigates how the social moral political and legal atmosphere of smokefree came into being and examines the ideas about smoke air the senses space and time which underlie it Looking at the impact on public space and individuals she reveals broader findings about the relationship between the state agents and what is seen to constitute the public Enriched with ethnographic vignettes from the author s ten years of fieldwork in Australia Smokefree is a challenging important book which demands to be read and discussed by anyone with an interest in anthropology sociology political science human geography and public health **Harper's Magazine** ,1866 Important American periodical dating back to 1850 *Harper's New Monthly Magazine* ,1866 **Harper's New Monthly Magazine** Henry Mills Alden,1866 Harper s informs a diverse body of readers of cultural business political literary and scientific affairs Man's Higher Consciousness Prof. Hilton Hotema,2016-01-18 In this book first published in 1962 Professor Hilton Hotema provides his insights into how we could all live longer by learning the body s simple requirements of breathing fresh air avoiding animal flesh banning any cooked food and by gradually lessening the amount of food consumed Hotema firmly believes that breathing fresh air and consuming organic fruits and natural organic liquids alone could extend our lives and also lays bare his secret that what kills at an early age is not the illusion of time but rather overeating breathing in toxic unclean air and elements such as electronic radiation dirty electricity and medications A must read for any health conscious individual

Nature in the Middle Ages and the Early Modern Times Albrecht Classen,2024-07-01 The study of pre modern anthropology requires the close examination of the relationship between nature and human society which has been both precarious and threatening as well as productive soothing inviting and pleasurable Much depends on the specific circumstances as the works by philosophers theologians poets artists and medical practitioners have regularly demonstrated It would not be good enough as previous scholarship has commonly done to examine simply what the various writers or artists had to say about nature While modern scientists consider just the hard core data of the objective world cultural historians and literary scholars endeavor to comprehend the deeper meaning of the concept of nature presented by countless writers and artists Only when we have a good grasp of the interactions between people and their natural environment are we in a position to identify and interpret mental structures social and economic relationships medical and scientific concepts of human health and the messages about all existence as depicted in major art works In light of the current conditions

threatening to bring upon us a global crisis it matters centrally to take into consideration pre modern discourses on nature and its enormous powers to understand the topoi and tropes determining the concepts through which we perceive nature Nature thus proves to be a force far beyond all human comprehensibility being both material and spiritual depending on our critical approaches

An Environmental History of the Middle Ages John Aberth, 2013 The Middle Ages was a critical and formative time for Western approaches to our natural surroundings eeAn *Environmental History of the Middle Ages* is a unique and unprecedented cultural survey of attitudes towards the environment during this period Humankind's relationship with the environment shifted gradually over time from a predominantly adversarial approach to something more overtly collaborative until a series of ecological crises in the late Middle Ages With the advent of shattering events such as the Great Famine and the Black Death considered efflorescences of the climate downturn known as the Little Ice Age that is comparable to our present global warming predicament medieval people began to think of and relate to their natural environment in new and more nuanced ways They now were made to be acutely aware of the consequences of human impacts upon the environment anticipating the cyclical new ecology approach of the modern world Exploring the entire medieval period from 500 to 1500 and ranging across the whole of Europe from England and Spain to the Baltic and Eastern Europe John Aberth focuses his study on three key areas
