Poisson Geometry, Deformation Quantisation and Group Representations Simone Gutt,John Rawnsley,Daniel Sternheimer,2005-06-21 An accessible introduction to Poisson geometry suitable for graduate students **O-Minimality and Diophantine Geometry** G. O. Jones,A. J. Wilkie,2015-08-20 This collection of articles originating from a short course held at the University of Manchester explores the ideas behind Pila s proof of the Andre Oort conjecture for products of modular curves The basic strategy has three main ingredients the Pila Wilkie theorem bounds on Galois orbits and functional transcendence results All of these topics are covered in this volume making it ideal for researchers wishing to keep up to date with the latest developments in the field Original papers are combined with background articles in both the number theoretic and model theoretic aspects of the subject These include Martin Orr s survey of abelian varieties Christopher Daw s introduction to Shimura varieties and Jacob Tsimerman s proof via o minimality of Ax s theorem on the functional case of Schanuel s conjecture Recent Advances in Algebraic Geometry Christopher D. Hacon,Mircea Mustaţă,Mihnea Popa,2015-01-15 A comprehensive collection of expository articles on cutting edge topics at the forefront of research in algebraic geometry Quantum Mathematical Physics Felix Finster,Johannes Kleiner,Christian Röken,Jürgen Tolksdorf,2016-02-24 Quantum physics has been highly successful for more than 90 years Nevertheless a rigorous construction of interacting quantum field theory is still missing Moreover it is still unclear how to combine quantum physics and general relativity in a unified physical theory Attacking these challenging problems of contemporary physics requires highly advanced mathematical methods as well as radically new physical concepts This book presents different physical ideas and mathematical approaches in this direction It contains a carefully selected cross section of lectures which took place in autumn 2014 at the sixth conference Quantum Mathematical Physics A Bridge between Mathematics and Physics in Regensburg Germany In the tradition of the other proceedings covering this series of conferences a special feature of this book is the exposition of a wide variety of approaches with the intention to facilitate a comparison The book is mainly addressed to mathematicians and physicists who are interested in fundamental questions of mathematical physics It allows the reader to obtain a broad and up to date overview of a fascinating active research area **Surveys in Combinatorics 2015** Artur Czumaj,2015-07-02 This book contains surveys of recent important developments in combinatorics covering a wide range of areas in the field *Inequalities for Graph Eigenvalues* Zoran Stanić,2015-07-23 This book explores the inequalities for eigenvalues of the six matrices associated with graphs Includes the main results and selected applications

Independence-Friendly Logic Allen L. Mann,Gabriel Sandu,Merlijn Sevenster,2011-05-05 Bringing together over twenty years of research this book gives a complete overview of independence friendly logic It emphasizes the game theoretical approach to logic according to which logical concepts such as truth and falsity are best understood via the notion of semantic games The book pushes the paradigm of game theoretical semantics further than the current literature by showing how

mixed strategies and equilibria can be used to analyze independence friendly formulas on finite models The book is suitable for graduate students and advanced undergraduates who have taken a course on first order logic It contains a primer of the necessary background in game theory numerous examples and full proofs   *Zariski Geometries* Boris Zilber,2010-02-04 This book presents methods and results from the theory of Zariski structures and discusses their applications in geometry as well as various other mathematical fields Its logical approach helps us understand why algebraic geometry is so fundamental throughout mathematics and why the extension to noncommutative geometry which has been forced by recent developments in quantum physics is both natural and necessary Beginning with a crash course in model theory this book will suit not only model theorists but also readers with a more classical geometric background   **The Cauchy Problem for Non-Lipschitz Semi-Linear Parabolic Partial Differential Equations** J. C. Meyer,D. J. Needham,2015-10-22 Reaction diffusion theory is a topic which has developed rapidly over the last thirty years particularly with regards to applications in chemistry and life sciences Of particular importance is the analysis of semi linear parabolic PDEs This monograph provides a general approach to the study of semi linear parabolic equations when the nonlinearity while failing to be Lipschitz continuous is H lder and or upper Lipschitz continuous a scenario that is not well studied despite occurring often in models The text presents new existence uniqueness and continuous dependence results leading to global and uniformly global well posedness results in the sense of Hadamard Extensions of classical maximum minimum principles comparison theorems and derivative Schauder type estimates are developed and employed Detailed specific applications are presented in the later stages of the monograph Requiring only a solid background in real analysis this book is suitable for researchers in all areas of study involving semi linear parabolic PDEs   Groups St Andrews 2013 C. M. Campbell,M. R. Quick,E. F. Robertson,C. M. Roney-Dougal,2015-10-22 Every four years leading researchers gather to survey the latest developments in all aspects of group theory Since 1981 the proceedings of those meetings have provided a regular snapshot of the state of the art in group theory and helped to shape the direction of research in the field This volume contains selected papers from the 2013 meeting held in St Andrews It begins with major articles from each of the four main speakers Emmanuel Breuillard Paris Sud Martin Liebeck Imperial College London Alan Reid Texas and Karen Vogtmann Cornell These are followed by in alphabetical order survey articles contributed by other conference participants which cover a wide spectrum of modern group theory

Moonshine - The First Quarter Century and Beyond James Lepowsky,John McKay,Michael P. Tuite,2010-06-03 This volume examines the impact of the Monstrous Moonshine paper on mathematics and theoretical physics   **Random Fields on the Sphere** Domenico Marinucci,Giovanni Peccati,2011-08-25 Random Fields on the Sphere presents a comprehensive analysis of isotropic spherical random fields The main emphasis is on tools from harmonic analysis beginning with the representation theory for the group of rotations SO 3 Many recent developments on the method of moments and cumulants for the analysis of Gaussian subordinated fields are reviewed This background material is used to analyse spectral

representations of isotropic spherical random fields and then to investigate in depth the properties of associated harmonic coefficients Properties and statistical estimation of angular power spectra and polyspectra are addressed in full The authors are strongly motivated by cosmological applications especially the analysis of cosmic microwave background CMB radiation data which has initiated a challenging new field of mathematical and statistical research Ideal for mathematicians and statisticians interested in applications to cosmology it will also interest cosmologists and mathematicians working in group representations stochastic calculus and spherical wavelets **Partial Differential Equations and Fluid Mechanics** James C. Robinson,2009-07-16 Reviews and research articles summarizing a wide range of active research topics in fluid mechanics **Permutation Patterns** Steve Linton,Nik Ruškuc,Vincent Vatter,2010-06-03 The study of permutation patterns is a thriving area of combinatorics that relates to many other areas of mathematics including graph theory enumerative combinatorics model theory the theory of automata and languages and bioinformatics Arising from the Fifth International Conference on Permutation Patterns held in St Andrews in June 2007 this volume contains a mixture of survey and research articles by leading experts and includes the two invited speakers Martin Klazar and Mike Atkinson Together the collected articles cover all the significant strands of current research structural methods and simple patterns generalisations of patterns various enumerative aspects machines and networks packing and more Specialists in this area and other researchers in combinatorics and related fields will find much of interest in this book In addition the volume provides plenty of material accessible to advanced undergraduates and is a suitable reference for projects and dissertations **Conformal Fractals** Feliks Przytycki,Mariusz Urbański,2010-05-06 A one stop introduction to the methods of ergodic theory applied to holomorphic iteration that is ideal for graduate courses Surveys in Combinatorics 2017 Anders Claesson,Mark Dukes,Sergey Kitaev,David Manlove,Kitty Meeks,2017-06-30 This volume contains nine survey articles which provide expanded accounts of plenary seminars given at the British Combinatorial Conference at the University of Strathclyde in July 2017 This biennial conference is a well established international event attracting speakers from around the world Written by internationally recognised experts in the field these articles represent a timely snapshot of the state of the art in the different areas of combinatorics Topics covered include the robustness of graph properties the spt function of Andrews switching techniques for edge decompositions of graphs monotone cellular automata and applications of relative entropy in additive combinatorics The book will be useful to researchers and advanced graduate students primarily in mathematics but also in computer science and statistics **Random Matrices: High Dimensional Phenomena** Gordon Blower,2009-10-08 This book focuses on the behaviour of large random matrices Standard results are covered and the presentation emphasizes elementary operator theory and differential equations so as to be accessible to graduate students and other non experts The introductory chapters review material on Lie groups and probability measures in a style suitable for applications in random matrix theory Later chapters use modern convexity theory to establish subtle results about the convergence of eigenvalue

distributions as the size of the matrices increases Random matrices are viewed as geometrical objects with large dimension The book analyzes the concentration of measure phenomenon which describes how measures behave on geometrical objects with large dimension To prove such results for random matrices the book develops the modern theory of optimal transportation and proves the associated functional inequalities involving entropy and information These include the logarithmic Sobolev inequality which measures how fast some physical systems converge to equilibrium **Sheaves and Functions Modulo p** Lenny Taelman,2016 Describes how to use coherent sheaves and cohomology to prove combinatorial and number theoretical identities over finite fields **Theory of P-adic Distributions** S. Albeverio,V. M. Shelkovich,2010-03-18 A wide ranging 2010 survey of new and important topics in p adic analysis for researchers and graduate students **Smoothness, Regularity and Complete Intersection** Javier Majadas,Antonio G. Rodicio,2010-05-06 Written to complement standard texts on commutative algebra this short book gives complete and relatively easy proofs of important results including the standard results involving localisation of formal smoothness M Andr and localisation of complete intersections L Avramov some important results of D Popescu and Andr on regular homomorphisms and some results from A Grothendieck s EGA on smooth homomorphisms The authors make extensive use of the Andr Quillen homology of commutative algebras but only up to dimension 2 which is easy to construct and they deliberately avoid using simplicial methods The book also serves as an accessible introduction to some advanced topics and techniques The only prerequisites are a basic course in commutative algebra and the first definitions in homological algebra
