Proceedings of the Ninth International Workshop Polarized Sources and Targets Vladimir P. Derenchuk, Barbara Von Przewoski, 2002 This book is an up to date survey of the science and technology of creating polarized beams and polarized targets The papers in this collection describe state of the art sources of polarized electrons ions atoms neutrons and radioactive isotopes discuss new polarized solid and gas target techniques present recent advances in polarimetry and review the use of polarized gas in medical imaging *Polarization Dynamics In Nuclear And Particle Physics - Proceedings Of The 2nd Adriatico Research Conference* Asim Orhan Barut, Nello Paver, Aldo Penzo, Ryszard Raczka, 1993-12-22 In the four years since the first Trieste Meeting on Spin and Polarization Dynamics in Nuclear and Particle Physics considerable progress has been made both in the theoretical and experimental aspects of this field The polarization phenomena have given rise to many more detailed and crucial tests which enhance our understanding of particle physics New information can also be uncovered in the process of conducting the various tests For this reason considerable efforts have been put into the present and future accelerators to extend the experimental data to measure polarization asymmetries for both polarized targets and polarized scattered and produced particles The 2nd Adriatico Research Conference held in January 1992 brought together both theorists and experimentalists who presented many new findings These findings have been compiled into this compact volume to give a complete picture of the wide range of theoretical and experimental problems difficulties results prospects and hopes which are at the core of particle physics studies today It will be a useful guide for the present status of polarization phenomena and their fundamental implications *Polarized Collider Workshop* John Clements Collins, Steve F. Tannenbaum, 2013-04-25 Aimed at graduate students and researchers in the field of high energy nuclear physics this book provides an overview of the basic concepts of large transverse momentum particle physics with a focus on pQCD phenomena It examines high pT probes of relativistic heavy ion collisions and will serve as a handbook for those working on RHIC and LHC data analyses Starting with an introduction and review of the field the authors look at basic observables and experimental techniques concentrating on relativistic particle kinematics before moving onto a discussion about the origins of high pT physics The main features of high pT physics are placed within a historical context and the authors adopt an experimental outlook highlighting the most important discoveries leading up to the foundation of modern QCD theory Advanced methods are described in detail making this book especially useful for newcomers to the field **Physics With A High Luminosity Polarized Electron Ion Collider - Proceedings Of The Workshop On High**

Energy Nuclear Physics (Epic 99) Leslie C Bland, J Timothy Londergan, Adam P Szczepaniak, 2000-02-28 This volume contains the proceedings of the Workshop on Physics with an Electron Polarized Ion Collider EPIC 99 jointly sponsored by the Indiana University Cyclotron Facility and Nuclear Theory Center and the Institute for Nuclear Theory University of Washington It was held in Bloomington Indiana April 8 11 1999 The purpose was to discuss important new physics phenomena which could be investigated with a high luminosity asymmetric collider consisting of a beam of polarized electrons with energy roughly 5 GeV and a beam of polarized protons or other light ions of approximately 40 GeV energy The Workshop brought together experts in the field who highlighted the unique potential for such a facility and compared the prospects and challenges for this collider with present and proposed facilities around the world The proceedings of this Workshop summarize our currently available knowledge on the physics potential for a polarized asymmetric collider It provides a unique collection of information on the opportunities which such a facility would provide *Nucleon Resonances And Nucleon Structure - Proceedings Of The Institute For Nuclear Theory First Summer School* Gerald A Miller, 1992-08-07 Recent experimental investigations of deep inelastic scattering baryon form factors and high momentum transfer nuclear reactions have revealed many unexpected phenomena that suggest deep relationships between nucleon structure hadronic spectroscopy and quantum chromodynamics The proceedings of this summer school will help young researchers understand these topics and appreciate the importance of existing and expected data This volume is the first of a series on the summer schools and workshops at the Institute for Nuclear Theory which was opened at the University of Washington following the recommendation of the Nuclear Science Advisory Committee The formation of this national institute was a response by the nuclear physics community to the shortage of nuclear theorists vis a vis experimentalists Pan Xiii: Particles And Nuclei - Proceedings Of The Xiii International Conference Alessandro Pascolini, 1994-05-31 This international conference was dedicated to the interface between nuclear and elementary particle physics It was the thirteenth in a series initiated by T E O Ericson A de Shalit and V F Weisskopf at CERN in 1963 The series provides the principal international forum for the presentation and critical examination of the main results of the experimental and theoretical research in the field of interest common to nuclear and particle physics The topics cover the energy region where nucleons must be treated as composite particles but quarks and gluons cannot be considered asymptotically free PAN XIII reviews the status of the field in a delicate stage of transition new experiments and instrumental facilities are bringing in more detailed and more accurate data on the various facets of the nuclear and subnuclear universe but we are still far from a satisfactory and complete description of nucleons and nuclei in terms of underlying quarks and their interactions **Trends In Collider Spin Physics - Proceedings Of The Adriatico Research Conference** Yasar Onel, Nello Paver, Aldo Penzo, 1997-03-10 The volume presents an up to date survey of spin physics at the very high energies of present and future colliders Topics discussed include the theory of high energy spin physics deep inelastic scattering polarization experiments at colliders the production of high

energy polarized electron and proton beams the construction of intense polarized sources and high energy polarimeters It will represent a significant reference in the field and an informative text for non specialists as well with rather complete keynote overview reports by some physicists who have contributed most to the subject In addition it will document the character of frontier research symposium of the Conference with specialized reports of leading experts in the various items of the field
