Geo-economics and Power Politics in the 21st Century Mikael Wigell,Sören Scholvin,Mika Aaltola,2018-07-06 Starting from the key concept of geo economics this book investigates the new power politics and argues that the changing structural features of the contemporary international system are recasting the strategic imperatives of foreign policy practice States increasingly practice power politics by economic means Whether it is about Iran s nuclear programme or Russia s annexation of Crimea Western states prefer economic sanctions to military force Most rising powers have also become

cunning agents of economic statecraft China for instance is using finance investment and trade as means to gain strategic influence and embed its global rise Yet the way states use economic power to pursue strategic aims remains an understudied topic in International Political Economy and International Relations The contributions to this volume assess geo economics as a form of power politics They show how power and security are no longer simply coupled to the physical control of territory by military means but also to commanding and manipulating the economic binds that are decisive in today s globalised and highly interconnected world Indeed as the volume shows the ability to wield economic power forms an essential means in the foreign policies of major powers In so doing the book challenges simplistic accounts of a return to traditional military driven geopolitics while not succumbing to any unfounded idealism based on the supposedly stabilising effects of interdependence on international relations As such it advances our understanding of geo economics as a strategic practice and as an innovative and timely analytical approach This book will be of much interest to students of security studies international political economy foreign policy and International Relations in general

Lessons for multi-level REDD+ benefit-sharing from revenue distribution in extractive resource sectors (oil, gas and mining) Luttrell, C., Betteridge, B., 2017-02-06 This brief focuses on lessons from the extractive resource sectors oil gas and mining for REDD benefit sharing Specifically it examines the different ways that revenues accruing to the government are distributed to subnational levels and the outcomes of different arrangements for doing so These lessons are particularly relevant for scenarios where REDD revenues might reach significant volumes Two main sorts of revenue would need to be distributed in the case of REDD i payments to central or sub national governments from international sources for emissions reduced and ii taxes and fees collected by central government from REDD activities Irawan et al 2014 In both cases decisions are needed on how to redistribute revenue between central and sub national levels

A key concern in decisions over public revenues is allocation across jurisdictions In this paper we look at the rationales behind the way revenues from the sector are shared both with sub national governments and across extractive and non extractive localities This experience is relevant for key questions facing REDD such as how to link benefit to performance at the sub national levels how to compensate costs how to distribute benefits across a nation and how to enhance development outcomes In so doing we address key concerns in the debate about REDD benefit sharing These include how REDD might act as an incentive for reducing deforestation and degradation and how it might also be integrated into development planning to help achieve wider outcomes
