Recent Climatic Change A Regional Approach:

Exploring Climate Change through Science and in Society Mike Hulme, 2013-09-11 Mike Hulme has been studying climate change for over thirty years and is today one of the most distinctive and recognisable voices speaking internationally about climate change in the academy in public and in the media. The argument that he has made powerfully over the last few years is that climate change has to be understood as much as an idea situated in different cultural contexts as it is as a physical phenomenon to be studied through universal scientific practices. Climate change at its core embraces both science and society both knowledge and culture. Hulme's numerous academic and popular writings have explored what this perspective means for the different ways climate change is studied, narrated, argued over and acted upon. Exploring Climate Change through Science and in Society gathers together for the first time a collection of his most popular, prominent and controversial articles, essays, speeches, interviews and reviews dating back to the late 1980s. The 50 or so short items are grouped together in seven themes: Science, Researching, Culture, Policy, Communicating, Controversy, Futures, and within each theme are arranged chronologically to reveal changing ideas, evidence and perspectives about climate change. Each themed section is preceded with a brief introduction drawing out the main issues examined. Three substantive unpublished new essays have been specially written for the book, including one reflecting on the legacy of Climategate. Taken as a collection, these writings reveal the changes in scientific and public understandings of climate change since the late 1980s as refracted through the mind and expression of one leading academic and public commentator. The collection shows the many different ways in which it is necessary to approach the idea of climate change to interpret and make sense of the divergent and discordant voices proclaiming it in the public sphere.

Geographers Elizabeth Baigent, André Reyes Novaes, 2018-11-15 Geographers: Biobibliographical Studies Volume 37 explores the concept of distinction in geography. Through the lives of six geographers working in Brazil, North America, Europe and the UK, it investigates what distinction consists of, how we identify and celebrate it, and how it relates to quotidian practices in the discipline. The volume highlights the continuing importance of biography and the International Geographical Union in recording and assessing distinction. It also considers the relevance of personal networks for the circulation and translation of distinguished geographical knowledge and how this knowledge can underpin applied projects and critical appraisal of geographical scholarship both at a national and sub-national level. Gendered notions of distinction are also addressed, particularly through June Sheppard, who found limited recognition for her work as a result of gendered expectations within the discipline and society at large. By reflecting on how we locate distinguished geographers and tell their histories, Geographers: Biobibliographical Studies Volume 37 makes an important contribution to fostering less canonical work in historical geography.

Climate-Ocean Interaction M.E. Schlesinger, 2012-12-06 Preface This book is the culmination of a workshop jointly organized by NATO and CEC on Climate Ocean Interaction which was held at Lady Margaret Hall, Oxford University during 26-30 September 1988. The objective of

the ARW was to assess the current status of research on climate ocean interaction with a major focus on the development of coupled atmosphere ocean ice models and their application in the study of past present and possible future climates This book contains 16 chapters divided into four parts Introduction Observations of the Climate of the Ocean Modelling the Atmospheric Oceanic and Sea Ice Components of the Climatic System and Simulating the Variability of Climate on Short Medium and Long Time Scales A fifth part contains the reports of the five Working Groups on Climate Observations Modelling ENSO Modelling and Prediction Climate Ocean Interaction on Time Scales of Decades to Centuries and Impact of Paleoclimatic Proxy Data on Climate Modelling Preface ix Acknowledgements I thank Howard Cattle and Neil Wells for their guidance and assistance as members of the Workshop Organizing Committee I particularly thank Michael Davey for all his efforts as Local Organizer to make the ARW a success I also thank the staff of Lady Margaret Hall Oxford University for their help with the arrangements for the ARW
