Phytohormones: A Window to Metabolism, Signaling and Biotechnological Applications Lam-Son Phan

Tran, Sikander Pal, 2014-04-01 Abiotic and biotic stresses adversely affect plant growth and productivity The phytohormones regulate key physiological events under normal and stressful conditions for plant development Accumulative research efforts have discovered important roles of phytohormones and their interactions in regulation of plant adaptation to numerous stressors Intensive molecular studies have elucidated various plant hormonal pathways each of which consist of many signaling components that link a specific hormone perception to the regulation of downstream genes Signal transduction pathways of auxin abscisic acid cytokinins gibberellins and ethylene have been thoroughly investigated More recently emerging signaling pathways of brassinosteroids jasmonates salicylic acid and strigolactones offer an exciting gateway for understanding their multiple roles in plant physiological processes At the molecular level phytohormonal crosstalks can be antagonistic or synergistic or additive in actions Additionally the signal transduction components of one hormonal pathway may interplay with the signaling components of other hormonal pathways Together these and other research findings have revolutionized the concept of phytohormonal studies in plants Importantly genetic engineering now enables plant biologists to manipulate the signaling pathways of plant hormones for development of crop varieties with improved yield and stress tolerance This book written by internationally recognized scholars from various countries represents the state of the art understanding of plant hormones biology signal transduction and implications Aimed at a wide range of readers including researchers students teachers and many others who have interests in this flourishing research field every section is concluded with biotechnological strategies to modulate hormone contents or signal transduction pathways and crosstalk that enable us to develop crops in a sustainable manner Given the important physiological implications of plant hormones in stressful environments our book is finalized with chapters on phytohormonal crosstalks under abiotic and biotic stresses

Medicinal and Aromatic Plants Tariq Aftab, Khalid Rehman Hakeem, 2021-03-27

Before the concept of history began, humans undoubtedly acquired life benefits by discovering medicinal and aromatic plants (MAPs) that were food and medicine. Today, a variety of available herbs and spices are used and enjoyed throughout the world and continue to promote good health. The international market is also quite welcoming for MAPs and essential oils. The increasing environment and nature-conscious buyers encourage producers to produce high quality essential oils. These consumer choices lead to growing preference for organic and herbal based products in the world market. As the benefits of medicinal and aromatic plants are recognized, these plants will have a special role for humans in the future. Until last century, the production of botanicals relies to a large degree on wild collection. However, the increasing commercial collection, largely unmonitored trade and habitat loss lead to an incomparably growing pressure on plant populations in the wild. Therefore, medicinal and aromatic plants are of high priority for conservation. Given the above, we bring forth a comprehensive volume Medicinal and Aromatic Plants: Healthcare and Industrial Applications highlighting the various healthcare, industrial and pharmaceutical applications that are being used on these immensely important MAPs and its future prospects. This collection of chapters from the different areas dealing with MAPs caters to the need of all those who are working or have interest in the above topic. **Biodiversity and Traditional Knowledge** Sarah A Laird, 2010-09-23

Biodiversity research and prospecting are long standing activities taking place in a new legal and ethical environment. Following entry into force of the Convention on Biological Diversity in 1993 and other recent policy developments, expectations and obligations for research and prospecting partnerships have changed. However, to date, there are few guides to integrating these concepts with practice. This book offers practical guidance on how to arrive at equitable biodiversity research and prospecting partnerships. Drawing on experience and lessons learned from around the world, it provides case studies, analysis and recommendations in a range of areas that together form a new framework for creating equity in these partnerships. They include researcher codes of ethics, institutional policies, community research agreements, the design of more effective commercial partnerships and biodiversity prospecting contracts, the drafting and implementation of national access and benefit sharing laws and institutional tools for the distribution of financial benefits. As part of the People and Plants initiative to enhance the role of communities in efforts to conserve biodiversity and use natural resources sustainably,
