Long-Memory Processes Jan Beran, Yuanhua Feng, Sucharita Ghosh, Rafal Kulik, 2013-05-14 Long memory processes are known to play an important part in many areas of science and technology including physics geophysics hydrology telecommunications economics finance climatology and network engineering In the last 20 years enormous progress has been made in understanding the probabilistic foundations and statistical principles of such processes This book provides a timely and comprehensive review including a thorough discussion of mathematical and probabilistic foundations and statistical methods emphasizing their practical motivation and mathematical justification Proofs of the main theorems are provided and data examples illustrate practical aspects This book will be a valuable resource for researchers and graduate students in statistics mathematics econometrics and other quantitative areas as well as for practitioners and applied researchers who need to analyze data in which long memory power laws self similar scaling or fractal properties are relevant

Time Series with Long Memory Peter M. Robinson, 2003 Long memory processes constitute a broad class of models for stationary and nonstationary time series data in economics finance and other fields Their key feature is persistence with high correlation between events that are remote in time A single memory parameter economically indexes this persistence as part of a rich parametric or nonparametric structure for the process Unit root processes can be covered along with processes that are stationary but with stronger persistence than autoregressive moving averages these latter being included in a broader class which describes both short memory and negative memory Long memory processes have in recent years attracted considerable interest from both theoretical and empirical researchers in time series and econometrics This book of readings collects articles on a variety of topics in long memory time series including modelling and statistical inference for stationary processes stochastic volatility models nonstationary processes and regression and fractional cointegration models Some of the articles are highly theoretical others contain a mix of theory and methods and an effort has been made to include empirical applications of the main approaches covered A review article introduces the other articles but also attempts a broader survey traces the history of the subject and includes a bibliography

[Statistics for Long-Memory Processes](#) Jan Beran, 2017-11-22 Statistical Methods for Long Term Memory Processes covers the diverse statistical methods and applications for data with long range dependence Presenting material that previously appeared only in journals the author provides a concise and effective overview of probabilistic foundations statistical methods and applications The material emphasizes basic principles and practical applications and provides an integrated perspective of both theory and practice This book explores data sets from a wide range of disciplines such as hydrology climatology telecommunications engineering and high precision physical measurement The data sets are conveniently compiled in the index and this allows readers to view statistical approaches in a practical context Statistical Methods for Long Term Memory Processes also supplies S PLUS programs for the major methods discussed This feature allows the practitioner to apply long memory processes in daily data

Climate Time Series Analysis Manfred Mudelsee, 2014-06-27 Climate is a paradigm of a complex system Analysing climate data is an exciting challenge which is increased by non normal distributional shape serial dependence uneven spacing and timescale uncertainties This book presents bootstrap resampling as a computing intensive method able to meet the challenge It shows the bootstrap to perform reliably in the most important statistical estimation techniques regression spectral analysis extreme values and correlation This book is written for climatologists and applied statisticians It explains step by step the bootstrap algorithms including novel adaptations and methods for confidence interval construction It tests the accuracy of the algorithms by means of Monte Carlo experiments It analyses a large array of climate time series giving a

detailed account on the data and the associated climatological questions comprehensive mathematical and statistical summary of time series analysis techniques geared towards climate applications accessible to readers with knowledge of college level calculus and statistics Computers and Geosciences A key part of the book that separates it from other time series works is the explicit discussion of time uncertainty a very useful text for those wishing to understand how to analyse climate time series Journal of Time Series Analysis outstanding One of the best books on advanced practical time series analysis I have seen David J Hand Past President Royal Statistical Society *Time Series: Theory and Methods* Peter J. Brockwell, Richard A. Davis, 1991 This paperback edition is a reprint of the 1991 edition Time Series Theory and Methods is a systematic account of linear time series models and their application to the modeling and prediction of data collected sequentially in time The aim is to provide specific techniques for handling data and at the same time to provide a thorough understanding of the mathematical basis for the techniques Both time and frequency domain methods are discussed but the book is written in such a way that either approach could be emphasized The book is intended to be a text for graduate students in statistics mathematics engineering and the natural or social sciences It contains substantial chapters on multivariate series and state space models including applications of the Kalman recursions to missing value problems and shorter accounts of special topics including long range dependence infinite variance processes and nonlinear models Most of the programs used in the book are available in the modeling package ITSM2000 the student version of which can be downloaded from <http://www.stat.colostate.edu/pjbrock/student06>
