Zitzewitz, 2011-02-01 Eschewing the usual mathematical explanations for physics phenomena this approachable reference explains complicated scientific concepts in plain English that everyone can understand Tackling the big issues such as gravity magnetism sound and what really happens in the Large Hadron Collider this engaging look at physics also spells out why cats always land on their feet why people appear to have red eyes in photographs and the real danger of looking at an eclipse For everyone who ever wondered how a light bulb works or how squirrels avoid electrocution on the power lines this handbook supplies answers on the physics of everyday life and examines the developments in the exploration of subatomic particles In addition to the question and answer section an addendum of facts about physicists explains what the Nobel prize is and who has won it and tells the story of the scientist who was incarcerated for agreeing with Copernicus Answers more than eight hundred questions about physics ranging from everyday life applications to the latest explorations in the field

The Golden Gate Bridge Susan Ashley, 2004-01-04 An introduction to the history and building of one of the world's longest bridges An Encyclopaedia of World Bridges David McFetrich, 2022-06-02 Bridges are one of the most important artefacts constructed by man the structures having had an incalculable effect on the development of trade and civilisation throughout the world Their construction has led to continuing advances in civil engineering technology leading to bigger spans and the use of new materials Their failures too whether from an inadequate understanding of engineering principles or as a result of natural catastrophes or warfare have often caused immense hardship as a result of lost lives or broken communications In this book a sister publication to his earlier *An Encyclopaedia of British Bridges* Pen Sword 2019 David McFetrich gives brief descriptions of some 1200 bridges from more than 170 countries around the world They represent a wide range of different types of structure such as beam cantilever stayed and suspension bridges Although some of the pictures are of extremely well known structures many are not so widely recognisable and a separate section of the book includes more than seventy lists of bridges with distinctly unusual characteristics in their design usage and history

Handbook of International Bridge Engineering Wai-Fah Chen, Lian Duan, 2013-10-11 This comprehensive and up to date reference work and resource book covers state of the art and state of the practice for bridge engineering worldwide. Countries covered include Canada and the United States in North America; Argentina and Brazil in South America; Bosnia, Bulgaria, Croatia, Czech Republic, Denmark, Finland, France, Greece, Macedonia, Poland, Russia, Serbia, Slovakia, and Ukraine in the European continent; China, Indonesia, Japan, Chinese Taipei, and Thailand in Asia; and Egypt, Iran, and Turkey in the Middle East. The book examines the use of different materials for each region including stone, timber, concrete, steel, and composite. It examines various bridge types including slab, girder, segmental, truss, arch, suspension, and cable stayed. A color insert illustrates select landmark bridges. It also presents ten benchmark comparisons for highway composite girder design from different countries: the highest bridges, the top 100 longest bridges, and the top 20 longest bridge spans for various bridge types including suspension, cable stayed, extradosed arch, girder, movable bridges, vertical lift, swing, and bascule, floating stress ribbon, and timber, and bridge construction methods.

The Pearson Concise General Knowledge Manual 2012,
Report on the 1995 Scanning Review of European Bridge Structures, 1996 Knots, Braids, and Mapping Class Groups
-- Papers Dedicated to Joan S. Birman Jane Gilman, 2001 There are a number of specialties in low dimensional topology that can find in their family tree a common ancestry in the theory of surface mappings. These include knot theory as studied through the use of braid representations and 3 manifolds as studied through the use of Heegaard splittings. The study of the surface mapping class group, the modular group, is of course a rich subject in its own right with relations to many different fields of mathematics and theoretical physics. However its most direct and remarkable manifestation is probably in the vast area of low dimensional topology. Although the scene of this area has been changed dramatically and experienced significant expansion since the original publication of Professor Joan Birman's seminal work *Braids, Links, and Mapping Class Groups* Princeton University Press, she brought together mathematicians whose research span many specialties all of common lineage. The topics covered are quite diverse. Yet they reflect well the aim and spirit of the conference to explore how these various specialties in low dimensional topology have diverged in the past 20-25 years as well as to explore common threads and potential future directions of development. This volume is dedicated to Joan Birman by her colleagues with deep admiration and appreciation of her contribution to low dimensional topology.
