Space, Place and Territory Fabio Duarte, 2017-01-12 Space place and territory are concepts that lie at the core of geography and urban planning environmental studies and sociology Although space place and territory are indeed polysemic and polemic they have particular characteristics that distinguish them from each other They are interdependent but not interchangeable and the differences between them explain how we simultaneously perceive conceive and design multiple

spatialities After drawing the conceptual framework of space place and territory the book initially explores how we sense space in the most visceral ways and how the overlay of meanings attached to the sensorial characteristics of space change the way we perceive it smell spatial experiences using electroencephalography and the changing meaning of darkness are discussed The book continues exploring cartographic mapping not as a final outcome but rather as an epistemological tool an instrument of inquiry It follows on how particular ideas of space place and territory are embedded in specific urban proposals from Brasilia to the Berlin Wall airports and infiltration of digital technologies in our daily life The book concludes by focusing on spatial practices that challenge the status quo of how we perceive and understand urban spaces from famous artists to anonymous interventions by traceurs and hackers of urban technologies Combining space place and territory as distinctive but interdependent concepts into an epistemological matrix may help us to understand contemporary phenomena and live them critically

Design Review Brenda C. Scheer, Wolfgang F.E. Preiser, 2012-12-06 That the topic of design review is somehow troubling My biases are clear from the start I am among those who believe that despite all signals to the contrary the physical structure of our environment is probably one thing all readers can agree on Beyond this however I suspect prospects of consensus are dim Differing opinions must be managed and that controlling it is on the subject likely range from those desiring the key to the amelioration of numerous problems control to those desiring freedom Says one camp confronting society today I believe that design our physical and natural environments are going can solve a host of problems and that the design to hell in a hand basket Says the other design of the physical environment does influence be review boards are only as good as their members behavior more often than not their interventions produce Clearly this is a perspective that encompasses mediocre architecture more than one building at a time and demands As a town planner and architect I am sympathetic that each building understand its place in a larger context to the full range of sentiment Perhaps a context the city Indeed anyone proposing discussion of these two concepts control and physical solutions to urban problems is designing freedom and their differences would now be or as may seem more often the case destroying useful But let me instead suggest that both position the city

Celebration, U.S.A. Douglas Frantz, Catherine Collins, 2000-09-01 A prize winning reporter his wife and their two kids describe life in Disney's vision of the future In 1997 six months after the first residents had moved into Celebration Florida Disney's town of the future with its distinctly retro link to a longed for past Doug and Cathy and their two kids closed on their new home and settled down to participate in and observe this new venture Their report from the trenches will surprise both Disney haters and Disney fans What is it like to start a new community not a suburb or subdivision but a town intended to be a self supporting community with the best of the new technologies including the very latest in teaching techniques and the most cherished elements in American towns that existed before the automobile turned everything into a mall For almost two years the family lived this experiment firsthand Their report is vivid funny and painful and it tells us as much about ourselves and our hopes and dreams as it does about the daily reality of building a community

Linking Architecture and Education Anne Taylor, 2009-05-16 For the past forty years Anne Taylor has studied how schools classrooms playgrounds homes museums and parks affect children and how they learn As a result she has developed a holistic sustainable philosophy of learning environment design She argues persuasively that architects must integrate their design knowledge with an understanding of the developmental needs of learners while at the same time educators parents and students must broaden their awareness of the built natural and cultural environment to maximize the learning experience In other words schools and other environments can themselves become three dimensional textbooks When architects are cognizant of newer models of education and educators view the environment as more than a box in which to teach prescribed lessons the result is an informed architecture that enables children to discover the power of their own learning The book presents numerous examples of dynamic designs that are the result of interdisciplinary understanding of place Taylor includes designer perspectives forums derived from commentary by outside contributors involved in school planning and a wealth of photographs of thoughtful and effective solutions to create learning environments from comprehensive design criteria Because the concept of school is enlarged to a community campus the book also spawns a new model of teaching and learning This book is essential reading for educators architects and community members who are anxious to transform education in America and elsewhere Anne Taylor is the most outstanding educator leading proponent and practitioner in the three dimensional textbook field Her work is the finest resource available for connecting students young and old to their learning environments and visa versa Edward E Kirkbride NCARB REFP Before Western man divided the universe into discrete subject matter areas the order in the universe was and still is both interdisciplinary and holistic The branching of trees spiraling of shells meandering of streams and the radial designs of flowers for example represent an analogy of mathematics biology and art The current artificial separation of subject matter is in contrast to the way the world is constructed and the way children perceive it Architecture and the study of the built natural and cultural environment synthesize the world of material things and the world of ideas Further more it helps us to realize that we are a part of not apart from the environment This book is a tool and a gift to designers educators and students everywhere to assist them in seeing the meaning behind all that we view and use for living on earth To know our precious relationship to our surroundings is the intent of this book In this way life is a work of art and each of us is an artist Anne Taylor

William C. Brocklesby: A

Connecticut Valley Architect in the Gilded Age Bill Ranauro, 2023-07-07 The late nineteenth century known commonly as the Gilded Age produced some of the most beautiful yet controversial architecture in America's history. The great influencers of the period including Richard Upjohn, Henry Hobson Richardson and Charles McKim each spread the gospel of his own architectural style. The result was an eclectic mix of styles that some detested but that others embraced. Caught in the struggle to find an architecture America could claim as its own, Hartford, Connecticut architect William Brocklesby carved out his own stylistic path. In an age when the taste for ostentation and pretension was adopted by many, William Brocklesby produced some of the most dignified and beautiful architecture in the Connecticut Valley. His churches, libraries and theaters remain as artistic landmarks throughout western New England and his work at colleges from Hartford to Amherst, Massachusetts make for some of the most picturesque college campuses in America. This book serves as a companion to the author's earlier book *Asher Benjamin: American Architect*. Author/Artist Taken together, the two books provide a view of developments in American architecture from 1790 to 1910.

The Architecture of William C. Brocklesby Hailing from Hartford, Connecticut, architect William C. Brocklesby (1847-1910) spent his career designing beautiful yet dignified churches, libraries and public buildings throughout the Connecticut River Valley and western New England. Working in an age when ostentation was the rule rather than the exception, Brocklesby maintained a restrained hand in the application of ornament. His design of Forbes Library in Northampton, Massachusetts stands out as a monument to his ability as a design architect. In addition, William Brocklesby was among a handful of nineteenth-century architects who made the Connecticut River Valley the birthplace of the prototypical American college campus. Working largely within the vision of the famed American landscape architects Andrew Jackson Downing and Frederick Law Olmstead, Brocklesby and others built campuses that were meant to mimic the traditional New England village. Through the designs of the college buildings by Peabody and Stearns and William Brocklesby, Smith College's architectural history traces the development of late nineteenth-century styles.

Architecture Depends Jeremy Till, 2013-02-08 Polemics and reflections on how to bridge the gap between what architecture actually is and what architects want it to be. Architecture depends on what. On people, time, politics, ethics, mess, the real world. Architecture, Jeremy Till argues with conviction in this engaging, sometimes pugnacious book, cannot help itself; it is dependent for its very existence on things outside itself. Despite the claims of autonomy, purity and control that architects like to make about their practice, architecture is buffeted by uncertainty and contingency. Circumstances invariably intervene to upset the architect's best-laid plans at every stage in the process, from design through construction to occupancy. Architects, however, tend to deny this, fearing contingency and preferring to pursue perfection. With *Architecture Depends*, architect and critic Jeremy Till offers a proposal for rescuing architects from themselves: a way to bridge the gap between what architecture actually is and what architects want it to be. Mixing anecdote, design, social theory and personal experience, Till's writing is always accessible, moving freely between high and low registers.
