**Applications of Computational Intelligence in Management and Mathematics I** Frank Lin, Imene Brigui, Nishtha Kesswani, Madhusudhan Mishra, Ashok Ray, 2025-08-30 This volume encapsulates the collective knowledge shared and innovations presented at the 9th International Conference on Computers Management Mathematical Sciences ICCM 2023 held on the 24th and 25th of August 2023 at the North Eastern Regional Institute of Science and Technology NERIST India The ICCM 2023 was a hybrid conference featuring both in person and virtual attendance and explores the transformative role of computational intelligence in solving complex problems across management and mathematics Computational intelligence encompasses techniques inspired by the human brain and nature such as fuzzy systems neural networks and evolutionary computation that excel in stochastic environments where reasoning is essential to derive meaningful solutions The proceedings offer a comprehensive overview of how these powerful algorithms and principles are applied to a diverse array of research challenges with a particular emphasis on computational aspects in the business domain Scholars researchers and students will find invaluable insights into the development and implementation of innovative methods tailored to real world scenarios Key Highlights Application of fuzzy logic to decision making in uncertain environments Advances in neural networks for predictive analysis and optimization Evolutionary computation techniques for addressing complex multi variable problems Insights into computational methods that bridge management theory and mathematical models This volume serves as a critical resource for anyone seeking to harness computational intelligence to push the boundaries of research in management and mathematics Whether you re a student embarking on your academic journey or a seasoned scholar this book provides the tools and knowledge needed to navigate this dynamic field *Parallel Processing for Artificial Intelligence 1* L.N. Kanal, H. Kitano, V. Kumar, C.B. Suttner, 2014-06-28 Parallel processing for AI problems is of great current interest because of its potential for alleviating the computational demands of AI procedures The articles in this book consider parallel processing for problems in several areas of artificial intelligence image processing knowledge representation in semantic networks production rules mechanization of logic constraint satisfaction parsing of natural language data filtering and data mining The publication is divided into six sections The first addresses parallel computing for processing and understanding images The second discusses parallel processing for semantic networks which are widely used means for representing knowledge methods which enable efficient and flexible processing of semantic networks are expected

to have high utility for building large scale knowledge based systems The third section explores the automatic parallel execution of production systems which are used extensively in building rule based expert systems systems containing large numbers of rules are slow to execute and can significantly benefit from automatic parallel execution The exploitation of parallelism for the mechanization of logic is dealt with in the fourth section While sequential control aspects pose problems for the parallelization of production systems logic has a purely declarative interpretation which does not demand a particular evaluation strategy In this area therefore very large search spaces provide significant potential for parallelism In particular this is true for automated theorem proving The fifth section considers the problem of constraint satisfaction which is a useful abstraction of a number of important problems in AI and other fields of computer science It also discusses the technique of consistent labeling as a preprocessing step in the constraint satisfaction problem Section VI consists of two articles each on a different important topic The first discusses parallel formulation for the Tree Adjoining Grammar TAG which is a powerful formalism for describing natural languages The second examines the suitability of a parallel programming paradigm called Linda for solving problems in artificial intelligence Each of the areas discussed in the book holds many open problems but it is believed that parallel processing will form a key ingredient in achieving at least partial solutions It is hoped that the contributions sourced from experts around the world will inspire readers to take on these challenging areas of inquiry
