Manual Asymmetries In Motor Performance:

Manual Asymmetries, Handedness and Motor Performance Pamela Bryden, Andrea Helen Mason, Claudia L. R. Gonzalez, 2016-06-10 The performance of most tasks with one hand typically the right is a uniquely human characteristic Not only do people prefer to use one hand rather than the other but also they usually perform tasks faster and more accurately with this hand The study of manual asymmetries and what such performance differences between the two hands reveal about brain organization and motor function has been a topic of considerable research over the last several decades The aim of this Research Topic is to review and further explore the origins of manual asymmetries and their relationship to handedness unimanual and bimanual motor performance and brain function The articles included here involve original research conducted in humans or non human models species as well as theoretical perspectives review articles and meta analyses

Manual Asymmetries in Motor Performance Digby Elliott, Eric A. Roy, 1996-06-06 Manual asymmetries refers to differences in performance capabilities of the two hands Humans may be the only species that show a consistent preference for the right hand *Perceptual-motor Behavior in Down Syndrome* Daniel J. Weeks, Romeo Chua, Digby Elliott, 2000 Part 2 Motor Development Learning and Adaptive Change **Motor Behavior and Human Skill** Jan P. Piek, 1998 Motor Behavior and Human Skill details the most recent research in motor control and human skill The book provides a forum for the analysis of the many diverse theoretical approaches used in the understanding of motor control including the cognitive dynamical systems computational and neurological approaches **Hemispheric Specialisation in Animals and Humans** Joël Fagot, 1997 Functional cerebral specialization is a phenomenon of considerable relevance not only to those investigating normal brain function but also to scientists who study and treat clinical populations This special issue of *Laterality* brings together contributions from researchers studying human populations and those using animal models and includes a discussion of the important issues in the field of lateralization of function The papers address the origins of laterality and the nature of lateralized functions in various species as well as relations among the different forms of lateralization Included are such topics as lateralized memory processes early experiential effects on laterality the genetic basis of handedness perceptual processing in the haptic or visual domain and learning Comparisons between human and non human primate findings and the implications of these findings for our understanding of the phylogenetic basis of hemispheric specialization are also emphasized The papers are based on presentations at two symposia that took place in August 1996 Issues in *Laterality* held at the International Congress of Psychology in Montreal and *Laterality and Hemispheric Specialization in Primates Brain Behavior and Evolution* held at the University of Wisconsin Madison at the joint meetings of the XVI Congress of the International Primatological Society and the XIX Conference of the American Society of Primatologists
