

Water plays a vital role in the life of your marijuana plant. High-quality water can take your grow to a higher level since it is the foundation of a successful grow

Water contains minerals and other components that will directly affect the pH of the plant's environment and the nutrients it receives

You can get rid of chlorine by simply letting the water stand for 24 hours in an open container since it evaporates

A bonus for letting the water stand is that it will become room temperature making it less of a shock to your plants when you water them.

Overwatering will deprive your plant of oxygen which can lead to root rot

ensure that the pot you are using has holes on the bottom so that the water can drain properly. Water that doesn't drain well can cause root rot and mildew

Only water your plants when the top of the soil is dry about an inch deep
