Technology and Safety of Marine Systems J. Wang, 2003-07-22 Traditionally society has regulated hazardous industries by detailed references to engineering codes standards and hardware requirements These days a risk based approach is adopted Risk analysis involves identifying hazards categorizing the risks and providing the necessary decision support to determine the necessary arrangements and measures to reach a safe yet economical operating level When adopting such an approach the abundance of techniques available to express risk levels can often prove confusing and inadequate This highly practical guide to safety and risk analysis in Marine Systems not only adds to the current techniques available but more importantly identifies instances where traditional techniques fall short Uncertainties that manifest within risk analysis are highlighted and alternative solutions presented In addition to risk analysis techniques this book addresses influencing elements including reliability Maintenance Decision making and Human error The highly practical approach of this title ensures it is accessible to the widest possible audience

Safer Seas Koji Fukuoka, 2019-07-05 Marine accidents can occur at any time and everywhere in the world resulting in loss of life property environment and reputation of the companies involved Preventing accidents and establishing a safer world without accidents is an important agenda for the maritime industry Since the enforcement of the International Safety Management Code in 1998 companies have taken various kinds of measures to prevent accidents Unfortunately measures have been undertaken in a disorganized manner and have not been effective Experts of risk management the safety management system and accident models have each undertaken accident preventive measures within the scope of their specific fields but have not looked

beyond the realm of their own fields This book discusses systematic accident prevention by integrating multi disciplinary expertise based on academic research the quality management system which has already proved its effectiveness in other fields and findings of the author s research In systematic accident prevention the weaknesses of a system within which accidents and incidents have occurred are viewed by combining scientific accident investigation data based on the International Maritime Organization model and the accident model The nature of every type of marine accident such as collisions groundings occupational casualties etc are derived by combining the accident model and statistical data System weaknesses are rectified by the risk reduction method of risk management and the rectified performance is incorporated in improvement in the system by the PDCA cycle which is the core of the Safety Management System We can see the weakness in the system and reduce the number of accidents and incidents while utilizing limited resources optimally to prevent accidents and incidents

Human Factors for Naval Marine Vehicle Design and Operation Jonathan M. Ross,2017-03-02 There is a driving need for naval professionals to focus on human factors issues The number of maritime accidents is increasing and the chief cause is human error both by the designer and the operator Decreasing crew size lack of experienced operators operations in higher sea states and fatigue worsen the situation Automation can be a partial solution but flawed automated systems actually contribute to accidents at sea Up to now there has been no overarching resource available to naval marine vehicle designers and human factors professionals which bridges the gap between the human and the machine in this context Designers understand the marine vehicle human factors professionals understand how a particular environment affects people Yet neither has a practical understanding of the other s field and thus communicating requirements and solutions is difficult This book integrates knowledge from numerous sources as well as the advice of a panel of eight recognized experts in the fields of related research development and operation The result is a reference that bridges the communications gap and stands to help enhance the design and operation of all naval marine vehicles
