Market-neutral Investing, 2000 **Market Neutral Investing** G Joseph Nicholas, Vision Books Private, Limited, 2005-03 In volatile markets controlling downside risk is critical in order to achieve strong returns and market neutral investing has emerged as a leading method for achieving this goal In this book U S investment expert Joseph G Nicholas explores important new market neutral approaches to return enhancement and risk reduction Market neutral strategies help in eliminating certain market risks through offsetting long and short positions and can be used with all the different asset classes The complexities created by the combination of longs shorts and leverage however make market neutral strategies very different from conventional investments Getting to know how these strategies work involves breaking them down into their basic components and then examining how those parts interact as a system with specific risk and reward characteristics

Alternative Beta Strategies and Hedge Fund Replication Lars Jaeger, Jeffrey Pease, 2008-10-13 There's a buzzword that has quickly captured the imagination of product providers and investors alike hedge fund replication In the broadest sense replicating hedge fund strategies means replicating their return sources and corresponding risk exposures However there still lacks a coherent picture on what hedge fund replication means in practice what its premises are how to distinguish different approaches and where this can lead us to Serving as a handbook for replicating the returns of hedge funds at considerably lower cost Alternative Beta Strategies and Hedge Fund Replication provides a unique focus on replication explaining along the way the return sources of hedge funds and their systematic risks that make replication possible It explains the background to the new discussion on hedge fund replication and how to derive the returns of many hedge fund strategies at much lower cost it differentiates the various underlying approaches and

explains how hedge fund replication can improve your own investment process into hedge funds Written by the well known Hedge Fund expert and author Lars Jaeger the book is divided into three sections Hedge Fund Background Return Sources and Replication Techniques Section one provides a short course in what hedge funds actually are and how they operate arming the reader with the background knowledge required for the rest of the book Section two illuminates the sources from which hedge funds derive their returns and shows that the majority of hedge fund returns derive from systematic risk exposure rather than manager Alpha Section three presents various approaches to replicating hedge fund returns by presenting the first and second generation of hedge fund replication products points out the pitfalls and strengths of the various approaches and illustrates the mathematical concepts that underlie them With hedge fund replication going mainstream this book provides clear guidance on the topic to maximise returns

Performance of 130/30 Strategies Sebastian Riegler-Rittner, 2009 One of the latest innovations in asset management that has rapidly increased in popularity in recent years is the so called 130/30 strategy Through a combination of leverage and short selling this strategy enables portfolio managers to underweight unattractive securities to a much bigger extent than it is possible with long only portfolios This book analyzes the performance of 130/30 and other active extension portfolios that are built according to a quantitative security selection model using typical value fundamentals such as the dividend yield or the price to earnings ratio In comparison to the benchmark and traditional long only portfolios the 130/30 strategy does outperform the former two over a 15 year time period from 1993 to early 2008 even after accounting for costs When analyzing the risk adjusted returns in more detail it becomes obvious that a 130/30 strategy is an especially promising alternative to passive or active long only investment strategies in rather weak market phases as they were present during the early years of this decade That is why a dynamic strategy that switches between 130/30 long only and index depending on the respective market phase is analyzed as well When using for example an autoregressive model to select the appropriate strategy such a dynamic approach delivers significantly higher returns than a static active extension portfolio does
