**CUSTOMER PERSONALITY ANALYSIS AND PREDICTION USING MACHINE LEARNING WITH PYTHON** Vivian Siahaan, Rismon Hasiholan Sianipar, 2023-07-01 In this book we embark on an exciting journey through the world of machine learning where we explore the intricacies of working with datasets visualizing their distributions performing regression analysis and predicting clusters This book serves as a comprehensive guide for both beginners and experienced practitioners who are eager to delve into the realm of machine learning and discover the power of predictive analytics Chapter 1 and Chapter 2

sets the stage by introducing the importance of data exploration. We learn how to understand the structure of a dataset, identify its features, and gain insights into the underlying patterns. Through various visualization techniques, we uncover the distribution of variables, detect outliers, and discover the relationships between different attributes. These exploratory analyses lay the foundation for the subsequent chapters where we dive deeper into the realms of regression and cluster prediction. Chapter 3 focuses on regression analysis on number of total purchases, where we aim to predict continuous numerical values. By applying popular regression algorithms such as linear regression, random forest, naïve Bayes, KNN, decision trees, support vector, Ada boost, gradient boosting, extreme gradient boosting, and light gradient boosting, we unlock the potential to forecast future trends and make data-driven decisions. Through real-world examples and practical exercises, we demonstrate the step-by-step process of model training, evaluation, and interpretation. We also discuss techniques to handle missing data, feature selection, and model optimization to ensure robust and accurate predictions. Chapter 4 sets our exploration of clustering customers. We embarked on a captivating journey that allowed us to uncover hidden patterns and gain valuable insights from our datasets. We began by understanding the importance of data exploration and visualization, which provided us with a comprehensive understanding of the distribution and relationships within the data. Moving forward, we delved into the realm of clustering, where our objective was to group similar data points together and identify underlying structures. By applying K-means clustering algorithm, we were able to unveil intricate patterns and extract meaningful insights. These techniques enabled us to tackle various real-world challenges, including customer personality analysis. Building upon the foundation of regression and cluster prediction, Chapter 5 delves into advanced topics using machine learning models to predict clusters. We explore the power of logistic regression, random forest, naïve Bayes, KNN, decision trees, support vector, Ada boost, gradient boosting, extreme gradient boosting, and light gradient boosting models to predict the clusters. Throughout the book, we emphasize a hands-on approach, providing practical code examples and interactive exercises to reinforce the concepts covered. By utilizing popular programming languages and libraries such as Python and scikit-learn, we ensure that readers gain valuable coding skills while exploring the diverse landscape of machine learning. Whether you are a data enthusiast, a business professional seeking insights from your data, or a student eager to enter the world of machine learning, this book equips you with the necessary tools and knowledge to embark on your own data-driven adventures. By the end of this journey, you will possess the skills and confidence to tackle real-world challenges, make informed decisions, and unlock the hidden potential of your data.
