Reading German Fluently:

Fluency and Reading Comprehension in Typical Readers and Dyslexics Readers Simone A. Capellini, Giseli D.

Germano, 2018-02-22 Reading involves decoding and comprehension components and to become efficient it requires a large number of cognitive and linguistic processes. Among those, the phonological awareness, the alphabetic principle, the decoding, the fluency, the lexical development, and the text comprehension development. The reading comprehension is strongly related with the development of vocabulary, oral language, linguistic skills, memory skills, and ability to make inferences and the world experiences of each individual. These processes become important only when the professional needs to deal with students presenting difficulties in learning how to read. The difficulty using the knowledge of conversion rules between grapheme and phoneme to the word reading construction characterizes the dyslexia, which is a specific learning disorder with a neurological source. These difficulties presented by students with dyslexia interfere in their learning process, impairing the learning development. Knowing and following the reading development and its processes, as well as obtaining the punctuation of fluency abilities and students' comprehension, allow us to understand what happens when the student presents difficulties to read. This could help in the identification of learning disabilities and in the development of intervention programs.

Reading Fluency Asaad Khateb, Irit Bar-Kochva, 2016-05-11 The book is dedicated to the blessed memory of Prof Zvia Breznitz, whose groundbreaking research has made a tremendous impact on the understanding of fluency in reading. The book presents a multidimensional perspective of recent research and reviews on fluency in reading. The first part presents recent brain imaging findings from studies into the neurobiological basis of reading, as well as cognitive and language studies exploring the underlying factors of fluency in reading and its development. The second part comprises reviews of intervention studies that address reading ability and, in particular, fluency in reading. The book provides a unique multilingual perspective on reading research by including studies of readers of different orthographies and speakers of different languages. Both scientists exploring the different aspects of reading and language and clinicians of reading intervention will find this book not only of great interest but extremely useful in its clear and in-depth presentation of current reading research. *Fluency in Reading* Zvia Breznitz, 2006-08-15 This is the first book to examine in depth the crucial role of the speed of information processing in the brain in determining reading fluency in both normal and dyslexic readers. Part I explains fluency in reading from both traditional and modern perspectives. Fluency has historically been viewed as the outcome of other reading-related factors and has often been seen as a convenient measure of reading skills. This book, however, argues that fluency has a strong impact on other aspects of reading and plays a central role in the entire reading process. Part II deals with the determinants of reading fluency. Chief among these is the speed of information processing in the brain. Using both behavioral and electrophysiological evidence, the book systematically examines the features of processing speed in the various brain systems involved in reading: visual, orthographic, auditory, phonological, and semantic, and shows how speed of processing affects

fluency in reading Part III deals with the complex issues of cross modal integration and specifically with the need for effective synchronization of the brain processes involved in reading It puts forward the Synchronization Hypothesis and discusses the role of the Asynchrony Phenomenon as a major factor in dyslexia Finally it summarizes research on manipulating reading rate by means of the Acceleration method providing evidence for a possible intervention aimed at reducing Asynchrony Key features of this outstanding new book include Expanded View of Fluency Reading fluency is seen as both a dependent and an independent Variable Currently available books focus on reading rate solely as the outcome of other factors whereas this volume stresses that it is both an outcome and a cause Information Processing Focus Fluency itself is determined to a large extent by a more general factor namely speed of processing in the brain The book presents wide ranging evidence for individual differences in speed of processing across many subpopulations Brain Synchronization Focus The book posits a new theory arguing that effective reading requires synchronization of the different brain systems visual orthographic auditory phonological and semantic Research Based Interventions Interventions to enhance fluency and thereby reading skills in general are presented in detail Author Expertise Zvia Breznitz is Head of the Department of Learning Disabilities and Director of the Laboratory for Neurocognitive Research at Haifa University in Israel where she has been researching this topic for over a decade This book is appropriate for researchers and advanced students in reading dyslexia learning disabilities cognitive psychology and neuropsychology **School Document** ,1912 **Documents of the School Committee of the City of Boston** Boston (Mass.).
