[The Nature of Mind](#) Douglas M. Stokes, 2024-10-18 Western science teaches that our beings are governed by the laws of physics and our minds play no part There are however flaws in this thinking most prominently unexplained paranormal phenomena that defy explanation by modern theories of physics Collected by parapsychologists these data include extrasensory perception ESP poltergeist occurrences and psychokinesis Much of the current data in parapsychology and their implications for understanding the true

nature of the self are examined here Beginning with a consideration of several instances of spontaneous psi the book examines the theoretical explanations of paranormal phenomena It covers the hypothesis and evidence that minds contain the so called hidden variables that determine the outcomes of the quantum process thus interweaving parapsychology with modern physics The reader is also forced to consider in detail the relationship between the conscious mind and the physical brain and the evidence that minds survive the death of bodies

**The Metaphysics of Science** Craig Dilworth, 2007-10-04 The roots of this work lie in my earlier book *Scientific Progress* which first appeared in 1981 One of its topics the distinction between scientific laws and theories is there treated with reference to the same distinction as drawn by N R Campbell in his *Physics The Elements* Shortly after completing *Scientific Progress* I read Rom Harr s *The Principles of Scientific Thinking* in which the concept of theory is even more clearly delineated than in Campbell being directly connected to the notion of a model as it was in my book In subsequent considerations regarding science Harr s work thus came my main source of inspiration with regard to theories while Campbell s remained my main source with respect to empirical laws Around the same time I also read William Whewell s *Philosophy of the Inductive Sciences* In this work Whewell depicts principles as playing a central role in the formation of science and conceives of them in much the same way as Kant conceives of fundamental synthetic a priori judgements The idea that science should have principles as a basic element immediately made sense to me and from that time I have thought of science in terms of laws theories and principles
