Representations of Finite Chevalley Groups B. Srinivasan, 2006-11-14 **Representations of Finite Chevalley Groups** B. Srinivasan, 2014-09-01 *Representations of Finite Chevalley Groups* George Lusztig, 1978 The notes came from a series of lectures given by the author at a CBMS Regional Conference held at Madison Wisconsin in August 1977 The main purpose of the notes was to show how l adic cohomology of algebraic varieties over fields of positive characteristic can be used to obtain information on the representations of finite Chevalley groups *Representations of Finite Chevalley Groups* James E. Humphreys, 1976 *Representations of finite Chevalley groups* Bhama Srinivasan, 1979 *Vertices of irreducible representations of finite chevalley groups in the describing characteristic* Richard Dipper, 1980 **On Some Problems in Representation Theory of Finite Chevalley Groups** Corneliu Hoffman, 1998 The Arcata Conference on Representations of Finite Groups, Part 1 Paul Fong, 1987 The papers in these proceedings of the 1986 Arcata Summer Institute bear witness to the extraordinarily vital and intense research in the representation theory of finite groups The confluence of diverse mathematical disciplines has brought forth work of great scope and depth Particularly striking is the influence of algebraic geometry and cohomology theory in the modular representation theory and the character theory of reductive groups over finite fields and in the general modular representation theory of finite groups The continuing developments in block theory and the general character theory of finite groups is noteworthy The expository and research aspects of the Summer Institute are well represented by these papers Modular Representations of Finite Groups of Lie Type James E. Humphreys, 2006 A comprehensive treatment of the representation theory of finite groups of Lie type over a field of the defining prime characteristic **Ordinary and Modular Representations of Chevalley Groups** J. E. Humphreys, 2006-11-14 **Representations of Groups** Bruce Normansell Allison, Gerald Howard Cliff, Canadian Mathematical Society, 1995 Survey and research articles from the June 1994 seminar address representations of Lie algebraic finite and quantum groups and the relationships among these areas Topics include complex reflection groups and their associated braid groups automata to perform basic calculations in Coxeter groups Heck algebras and representations of finite reductive groups and Koszul algebras and duality Of interest to graduate students and research mathematicians No index Annotation copyright by Book News Inc Portland OR **Groups, Combinatorics & Geometry** A. algebraic geometry group representations algebraic K theory and some of their applications **Irreducible Geometric Subgroups of Classical Algebraic Groups** Timothy C. Burness,,Soumaïa Ghandour,Donna M. Testerman,2016-01-25 Let G be a simple classical algebraic group over an algebraically closed field of characteristic p with natural module V . Let H be a closed subgroup of G and let U be a non trivial irreducible tensor indecomposable restricted rational module such that the restriction of U to H is irreducible In this paper the authors classify the triples of this form where H is a disconnected maximal positive dimensional closed subgroup of G preserving a natural geometric structure on V **Unitary Reflection Groups** Gustav I. Lehrer,Donald E. Taylor,2009-08-13 A complex reflection is a linear transformation which fixes each point in a hyperplane Intuitively it resembles the transformation an image undergoes when it is viewed through a kaleidoscope or arrangement of mirrors This book gives a complete classification of all groups of transformations of n dimensional complex space which are generated by complex reflections using the method of line systems In particular irreducible groups are studied in detail and are identified with finite linear groups reflection subgroups of reflection groups are completely classified the theory of eigenspaces of elements of reflection groups is discussed fully an appendix outlines links to representation theory topology and mathematical physics Containing over 100 exercises ranging in difficulty from elementary to research level this book is ideal for honours and graduate students or for researchers in algebra topology and mathematical physics [Amitsur Centennial Symposium](#) Avinoam Mann,Louis H. Dalenort,2012-12-06 In our daily lives

we conceive of our surroundings as an objectively given reality The world is perceived through our senses and these provide us so we believe with a faithful image of the world But occasionally we are forced to realize that our senses deceive us e.g. by illusions For a while it was believed that the sensation of color is directly related to the frequency of light waves until E. Land, the inventor of the polaroid camera, showed in detailed experiments that our perception of say a colored spot depends on the colors of its surrounding On the other hand we may experience hallucinations or dreams as real Quite evidently the relationship between the world and our brain is intricate Another strange problem is the way in which we perceive time or the Now Psychophysical experiments tell us that the psychological Now is an extended period of time in the sense of physics The situation was made still more puzzling when in the nineteen twenties Heisenberg and others realized that by observing processes in the microscopic world of electrons and other elementary particles we strongly interfere with that world The outcome of experiments at least in general can only be predicted statistically What is the nature of this strange relationship between object and observer This is another crucial problem of the inside outside or endo exo dichotomy
