Modeling Human and Organizational Behavior National Research Council, Division of Behavioral and Social Sciences and Education, Board on Human-Systems Integration, Panel on Modeling Human Behavior and Command Decision Making: Representations for Military Simulations, 1998-07-31 Simulations are widely used in the military for training personnel analyzing proposed equipment and rehearsing missions and these simulations need realistic models of human behavior This book draws together a wide variety of theoretical and applied research in human behavior modeling that can be considered for use in those simulations It covers behavior at the individual unit and command level At the individual soldier level the topics covered include attention learning memory decisionmaking perception situation awareness and planning At the unit level the focus is on command and control The book provides short medium and long term goals for research and development of more realistic models of human behavior

Automation, 1998-01-26 Automation in air traffic control may increase efficiency but it also raises questions about adequate human control over automated systems Following on the panel's first volume on air traffic control automation Flight to the Future NRC 1997 this book focuses on the interaction of pilots and air traffic controllers with a growing network of automated functions in the airspace system The panel offers recommendations for development of human centered automation addressing key areas such as providing levels of automation that are appropriate to levels of risk examining procedures for recovery from emergencies free flight versus ground based authority and more The book explores ways in which technology can build on human strengths and compensate for human vulnerabilities minimizing both mistrust of automation and complacency about its abilities The panel presents an overview of emerging technologies and trends toward automation within the national airspace system in areas such as global positioning and other aspects of surveillance flight information provided to pilots and controllers collision avoidance strategic long term planning and systems for training and maintenance The book examines how to achieve better integration of research and development including the importance of user involvement in air traffic control It also discusses how to harmonize the wide range of functions in the national airspace system with a detailed review of the free flight initiative

Handbook of Dynamic System Modeling Paul A. Fishwick, 2007-06-01 The topic of dynamic models tends to be splintered across various disciplines making it difficult to

uniformly study the subject Moreover the models have a variety of representations from traditional mathematical notations to diagrammatic and immersive depictions Collecting all of these expressions of dynamic models the Handbook of Dynamic Sy

Kozlowski,Eduardo Salas,2009-08-06 This scholarly book in SIOP s Organizational Frontier series looks at research on enhancing knowledge acquisition and its application in organizations It concentrates on training design and delivery given the changing nature of work and organizations Now that work is increasingly complex there is greater emphasis on expertise and cognitive skills Advances in technology such as computer simulations and web based training are necessitating a more active role for the learner in the training process In the broad context of the organization systems this book promotes learning and development as a continuous lifelong endeavor

Doing Good with Technologies:

Katinka Waelbers,2011-06-27 20th century technologies like cars the Internet and the contraceptive pill have altered our actions changed our perceptions and influenced our moral ideas for better and worse Upcoming technologies are bound to fulfill their own unique social roles How can we advance this social role so that it will support the good live and limit

undesired changes This book explores whether we can take a forward looking responsibility to optimize the social roles of technologies In doing so the book discusses three issues first it aims to understand the social role of technologies second it explores what it means to accept responsibility for this social role and third it searches for some forward looking tools that help us to see how new technologies may influence human behavior In a rather unique approach this book combines the influential sociological research of Bruno Latour on the social impacts of technologies with the contemporary Aristotelianism of Alasdair MacIntyre

Artificial War:

Multiagent-based Simulation Of Combat Andrew Ilachinski,2004-06-14 Military conflicts particularly land combat possess the characteristics of complex adaptive systems combat forces are composed of a large number of nonlinearly interacting parts and are organized in a dynamic command and control network local action which often appears disordered self organizes into long range order military conflicts by their nature proceed far from equilibrium military forces adapt to a changing combat environment and there is no master voice that dictates the actions of every soldier i e battlefield action is decentralized Nonetheless most modern state of the art military simulations ignore the self organizing properties of combat This book summarizes the results of a multiyear research effort aimed at exploring the applicability of complex adaptive systems theory to the study of warfare and introduces a sophisticated multiagent based simulation of combat called EINSTein EINSTein

whose bottom up generative approach to modeling combat stands in stark contrast to the top down or reductionist philosophy that still underlies most conventional military models is designed to illustrate how many aspects of land combat may be understood as self organized emergent phenomena Used worldwide by the military operations research community EINStein has pioneered the simulation of combat on a small to medium scale by using autonomous agents to model individual behaviors and personalities rather than hardware
