*Assisted Human Reproduction* Dani Singer, Myra Hunter, 2006-02-22 With contributions from Eric Blyth Ken Daniels Julia Feast Robert Lee Nina Martin Alexina McWhinnie Derek Morgan Clare Murray Sharon Pettle Claire Potter Jim Richards and Francoise Shenfield The separation of procreation from conception has broadened notions of parenthood and created novel dilemmas A woman may carry a foetus derived from gametes neither or only one of which came from her or her partner or she may carry a foetus created using in vitro fertilisation IVF with the purpose of handing it to two other parents one neither or both of whom may be genetically related to the prospective child Parents may consist of single sex couples only one of them genetically related to the child the prospective mother may be past her menopause and genetic parenthood after death is now achievable In a world increasingly reliant on medical science how can the argument that equates traditional with natural and novel with unnatural unethical be justified Should there be legislation which is notoriously slow to change in a field driven by dazzling new possibilities at ever faster rate particularly when restrictions differ from country to country so that those who can afford it travel elsewhere for their treatment of choice Whose rights are paramount the adults hoping to build a family or the prospective child ren s future well being On what basis can apparently competing rights be regulated or adjudicated and how and to what extent can these be enforced in practice

Melo-Martín, 2013-03-09 Each year roughly a million new cases of cancer appear in the US and more than 500 000 Americans die annually of premature death Although medical progress has slowed cancer mortality its incidence is increasing roughly six times faster than cancer mortality is decreasing Breast cancer in particular has been increasing about one percent each year since 1973 At least two of the factors responsible for this surge in breast cancer are women's use of medically prescribed synthetic hormones and the exposure of the entire population to chemicals such as dioxin Both exposures increase the likelihood of breast cancer Although many ethicists worry about involuntary societal imposition of chemicals such as dioxin through industrial and agricultural processes allegedly voluntary exposures also constitute both a public health problem and a biomedical ethics difficulty Physicians recommend synthetic hormones for example to women who apparently take them voluntarily In the case of in vitro fertilization doctors prescribe hormones to induce egg production and to increase the chances of reproduction for couples who are unable to have children Despite the benefits of medical technologies such as hormone stimulation and in vitro fertilization they also carry great risks The price that childless women pay for their opportunity to have children through in vitro fertilization may be their own increased risk of diseases such as breast cancer that are hormone dependent **Ethics, Reproduction and Genetic Control** Ruth Chadwick, 2006-12-05 In this revised

**Regulating Reproduction** Emily Jackson,2001-10-10 This new book provides a clear and accessible analysis of the various ways in which human reproduction is regulated A comprehensive exposition of the law relating to birth control abortion pregnancy childbirth surrogacy and assisted conception is accompanied by an exploration of some of the complex ethical dilemmas that emerge when one of the most intimate areas of human life is subjected to regulatory control Throughout the book two principal themes recur First particular emphasis is placed upon the special difficulties that arise in regulating new technological intervention in all aspects of the reproductive process Second the concept of reproductive autonomy is both interrogated and defended This book offers a readable and engaging account of the complex relationships between law technology and reproduction It will be useful for lecturers and students taking medical law or ethics courses It should also be of interest to anyone with a more general interest in women s bodies and the law or with the profound regulatory consequences of new technologies **Scientific and Medical Aspects of Human Reproductive Cloning** National Research Council,Division on Earth and Life Studies,Board on Life Sciences,Policy and Global Affairs,Committee on Science, Engineering, and Public Policy,2002-06-17 Human reproductive cloning is an assisted reproductive technology that would be carried out with the goal of creating a newborn genetically identical to another human being It is currently the subject of much debate around the world involving a variety of ethical religious societal scientific and medical issues Scientific and Medical Aspects of Human Reproductive Cloning considers the scientific and medical sides of this issue plus ethical issues that pertain to human subjects research Based on experience with reproductive cloning in animals the report concludes that human reproductive cloning would be dangerous for the woman fetus and newborn and is likely to fail The study panel did not address the issue of whether human reproductive cloning even if it were found to be medically safe would be or would not be acceptable to individuals or society *Determining Legal Parentage* Yehezkel Margalit,2019-04-25 Offering intentional parenthood as the most appropriate flexible and just normative doctrine for resolving the various dilemmas that have surfaced in the modern era **One Hundred Years of Music** Gerald Abraham,2017-07-05 One Hundred Years of Music provides a full account of the history of music from the death of Beethoven to the modern era It covers a period of exceptional interest The last hundred years coincide roughly with the rise and decline of Romanticism include the various nationalist movements and extend to the advent of neo classicism the twelve tone system and still more modern techniques Abraham devotes ample space to modernist and avant garde music in which he explains the difficulties we experience in listening to the work of such composers as Schnberg Bart k and Berg He also throws new light on many more familiar topics In its earlier editions One Hundred Years of Music became a standard work on this subject

it has since been brought updated to include coverage of later developments Abraham approaches his subject as an historian of style rather than an esthetic critic Rather than pass judgment on particular works or composers he shows how music has developed and thus provides a clear and connected history that is more substantial than most books of musical appreciation An extensive chronology and a full bibliography and index add to the usefulness of the book for students professionals and musical laymen alike This third edition incorporates some corrections of fact further enlarges the bibliography and chronology and adds commentary on developments in music techniques In order to correct the historical perspective the author has included a prelude and three interludes giving rough sketches of general conditions in the musical world at intervals of thirty years As the reader's sense of chronology is very apt to get confused when a number of simultaneous streams of development have to be described the author has inserted the date of composition or performance both if they are widely separated of each work at the first mention of it

**The Ethics of Artificial Uteruses** Stephen Coleman, 2017-11-28 Ectogenesis the gestation of the foetus outside of the human body will not for much longer be in the realm of science fiction a number of projects attempting to develop ectogenetic technology are currently under way This book examines the ethical implications of the development of ectogenesis Examining the implications for abortion ethics in particular this book also deals with the ethical objections to developing such a technology and the uses to which it may be put such as creating embryos to supply donor organs for transplantation The development of the artificial uterus may well be similar to cloning a sudden technological advance with dramatic ethical implications thrust suddenly into the public eye

**Age Discrimination And Children's Rights** Claire Breen, 2006 One of the aims of the United Nations Convention on the Rights of the Child is to accord due recognition to the fact that the child by reason of his physical and mental immaturity needs special safeguards and care including appropriate legal protection before as well as after birth However a question mark hangs over the extent to which special safeguards and care can negatively impact on the rights of the child and result in discrimination against the child in

the guise of his physical and mental immaturity This volume explores the extent to which children s rights are secured at the national level and the reasons why children s rights have or have not been recognised and secured by various states at the level of domestic law It also explores the difficulties inherent in the accordance of rights to children in order to ascertain whether they do in fact derive from the particular nature of children or whether they mask a reluctance of states to fulfil their domestic and international rights obligations to children and whether such reluctance constitutes discrimination against children The volume thus explores the theoretical and legal underpinnings of gender and race discrimination at both the domestic and international level and examines the extent to which these may be applied to the area of children s rights

Inconceivable Conceptions Jane Haynes, Juliet Miller, 2004-03 It is over two decades since the first test tube baby was born During this period a new belief that all infertile women can now have babies has become widely accepted indeed infertile couples may feel great pressure to seek a medical solution However the psychological and social effects of the changing experiences of infertility remain confusing both for those who experience infertility and for wider society In this book a distinguished range of contributors including novelist Hilary Mantel and Germaine Greer examine the experience of infertility from both male and female perspectives the psychological aspects of infertility diagnosis and treatment and the often radical and unexpected effects on kinship Drawing from a wide range of theoretical backgrounds including Jungian analytical and compelling personal reflections this book aims to unravel the implications of advancing reproductive technology for our understanding of ourselves and our families
