## **Reproductive Ethics:**

**Reproductive Ethics II** Lisa Campo-Engelstein, Paul Burcher, 2018-08-20 This book is the second collection of essays on reproductive ethics from Drs Campo Engelstein and Burcher This volume is unique in that it is both timely and includes several essays on new technologies while also being a comprehensive review of most of the major questions in the field from racial disparities in reproductive healthcare to gene editing and the possibility of the creation of a transhuman species The scholars writing these essays are pre eminent in their fields and their backgrounds are quite varied including philosophers anthropologists physicians and professors of law Reproductive ethics remains an underdeveloped area of bioethics despite the recent technological breakthroughs that carry both great promise and potential threats Building on the first volume of work from a conference held just over one year ago this new collection of essays from a conference held April 2017 continues this discussion as well as provides ethical insights and reviews of these emerging technologies The ethical questions swirling around human reproduction are both old and new but the conference presentations and the essays derived from them focus on new ways of appreciating old arguments such as the ethics of abortion as well as new ways of seeing new technologies such as CRISPR and mitochondrial transfer

**The Oxford Handbook of Reproductive Ethics** Leslie Francis, 2016-12-28 Intimate and medicalized natural and technological reproduction poses some of the most challenging ethical dilemmas of our time Reproduction presses the boundaries of humanity and ethical respect the permissible limits of technology conscientious objection by health care professionals and social justice This volume brings together scholars from multiple perspectives to address both traditional and novel questions about the rights

and responsibilities of human reproducers their caregivers and the societies in which they live Among issues treated in the volume are what it is to be a parent the responsibilities of parents and the role of society in facilitating or discouraging parenting May gamete donors be anonymous Is surrogacy in which a woman gestates a child for others ethically permissible when efforts are made to prevent coercion or exploitation Should it be mandatory to screen newborns for potentially serious conditions or permissible to sequence their genomes Are both parties to a reproductive act equally responsible to support the child even if one deceived the other Are there ethical asymmetries between male and female parents and is the lack of available contraceptives for men unjust Should the costs of infertility treatment be socially shared as they are for other forms of health care Do parents have a duty to try to conceive children under the best circumstances they can or to avoid conception if the child will suffer What is the status of the fetus and what ethical limits constrain the use of fetal tissue Reproduction is a rapidly changing medical field with novel developments such as mitochondrial transfer or uterine transplantation occurring regularly And there are emerging natural challenges too with Zika virus just the latest The volume gives readers tools not only to address the problems we now know but ones that may emerge in the future as well

*Reproductive Ethics* Lisa Campo-Engelstein, Paul Burcher, 2017-06-10 This book summarizes the contributions at an April 2016 conference held at Albany Medical College Reproductive Ethics New Challenges and Conversations Reproductive ethics does not suffer from a lack of challenging issues yet a few hot button issues such as abortion and surrogacy seem to attract most of the attention while other issues and dilemmas remain relatively underdeveloped in bioethics literature The goal of this book is to explore and expand the range of topics addressed in reproductive ethics This is a multi disciplinary book bringing together philosophers clinicians sociologists anthropologists and other scholars whose research or clinical interests touch reproductive issues The results of this compilation are a comprehensive and unique discussion of the evolving issues in the rapidly changing field The majority of the popular reproductive ethics anthologies were published at least 10 years ago The field of reproductive ethics would benefit from a new anthology that addresses some of the perennial dilemmas in reproductive ethics e g abortion sex selection from updated perspectives and that also covers new technologies that have emerged only in the last few years such as social egg freezing

Clinical Practice Julie Chor, Katie Watson, 2021 Like all clinicians reproductive health care providers face specialty specific ethical questions However the first editor of this book Dr Julie Chor JC has never found an ethics text that is tailored to the needs of practicing clinicians students and trainees in Reproductive Healthcare This is an unfortunate gap in the literature because whether reproductive health providers come from Obstetrics and Gynecology Family Medicine Pediatrics or another field they all must be able to identify and analyze complex ethical issues that lie at the crossroads of patient decision making scientific advancement political controversy government regulation and profound moral considerations in the context of continually evolving medical legal and societal factors To fill this gap Dr Chor invited co editor Professor Katie Watson KW to partner in creating the text that she has always longed to use but has never found as an Obstetrician Gynecologist practicing and teaching in this complex milieu

### **Practical Decision Making in**

**Health Care Ethics** Raymond J. Devettere, 2009-12-04 For nearly fifteen years Practical Decision Making in Health Care Ethics has offered scholars and students a highly accessible and teachable alternative to the dominant principle based theories in the field. Devettere's approach is not based on an ethics of abstract obligations and duties but following Aristotle on how to live a fulfilled and happy life in short an ethics of personal well being grounded in prudence the virtue of ethical decision making. This third edition is revised and updated and includes discussions of several landmark cases including the tragic stories of Terri Schiavo and Jesse Gelsinger the first death caused by genetic research. Devettere addresses new topics such as partial birth abortion, law, embryonic stem cell research, infant euthanasia in The Netherlands, recent Vatican statements on feeding tubes, organ donation after cardiac death, new developments in artificial hearts, clinical trials developed by pharmaceutical companies to market new drugs, ghostwritten scientific articles published in major medical journals and controversial HIV AIDS research in Africa. This edition also includes a new chapter on the latest social and political issues in American health care. Devettere's engaging text relies on commonsense moral concepts and avoids academic jargon. It includes a glossary of legal, medical and ethical terms, an index of cases and thoroughly updated bibliographic essays at the end of each chapter that offer resources for further reading. It is a true classic brilliantly conceived and executed and is now even more valuable to undergraduates and graduate students, medical students, health care professionals, hospital ethics committees and institutional review boards and general readers interested in philosophy, medicine and the rapidly changing field of health care ethics.
