Reproductive Technologies Gender Motherhood And Medicine Feminist:

Reproductive Technologies Michelle Stanworth, 1987-01-01 The creation of test tube babies acted as a spur to public debate about the implications of research on embryos in vitro fertilization surrogate motherhood and the whole range of technologies concerned with human reproduction The scope of reproductive technologies examined in this volume from techniques for the medical management of childbirth to genetic engineering is such that few women in the western world and smaller and smaller numbers in the third world escape their influence What then is their impact on the process of reproduction on family life and particularly on women *The Gendered Cyborg* Fiona Hovenden, Linda Janes, Gill Kirkup, Kathryn Woodward, 2013-09-13 The Gendered Cyborg explores the relationship between representation technoscience and gender through the metaphor of the cyborg The contributors argue that the figure of the cyborg offers ways of thinking about the relationship between culture and technology people and machines which disrupt the power of science to enforce the categories through which we think about being human male and female Taking inspiration from Donna Haraway's groundbreaking Manifesto for Cyborgs the articles consider how the cyborg has been used in cultural representation from reproductive technology to sci fi and question whether the cyborg is as powerful a symbol as is often claimed The different sections of the reader explore the construction of gender categories through science the interaction of technoscience and gender in contemporary science fiction film such as Blade Runner and the Alien series debates around modern reproductive technology such as ultrasound scans and IVF assessing their benefits and constraints for women issues relating to artificial intelligence and the internet **Feminism & Bioethics : Beyond Reproduction** Susan M. Wolf Faculty Associate at the Center for Biomedical Ethics and Associate Professor of Law and Medicine University of Minnesota Law School, 1996-03-21 Bioethics has paid surprisingly little attention to the special problems faced by women and to feminist analyses of current health care issues other than reproduction Feminism Bioethics Beyond Reproduction aims to counterbalance this one sided approach A breakthrough volume of original essays authored by leading figures in bioethics and feminist theory it moves beyond reproduction and nursing taking bioethics into new territory The book starts with an investigation of the relationship between feminism and bioethics and introduces different approaches to the problem Chapters stress the importance of liberal feminism which prefers feminist over feminine analysis integrate the experience of women of color draw from the women's self help movement and apply feminist standpoint theory In the second part of the book contributors view various bioethical problems from a feminist perspective euthanasia AIDS the definition of health doctor patient communication the Human Genome Project the conduct of biomedical research and health care reform They examine the pros and cons of the application of gender and feminism to bioethics This provocative volume is bound to change and broaden the way bioethicists students patients and the public consider bioethical issues Maternities and Modernities Kalpana Ram, Margaret Jolly, 1998-02-26 A wide ranging comparative study of concepts of motherhood Staging Motherhood J.

Komporal, 2006-10-31 Focusing on post 1956 British women playwrights this book questions to what extent transformations in women's lives have impacted on theatre Contributing to a range of discourses including gender studies cultural studies and theatre and performance studies this timely volume is crucial to our understanding of women's drama in this period

Women, Medicine, Ethics and the Law Susan Sherwin, Barbara Parish, 2020-09-10 This title was first published in 2002 A collection of articles focused on women within a general study of medicine ethics and the law Topics covered include areas where the institutions of medicine ethics and the law intersect in women's reproductive and sexual lives the impact of legal policies and dominant ethical beliefs on many aspects of women's health and the health practices and policies of bioethics and health law The editors recognise that it is important not to lose sight of social differences other than gender such as race ethnicity class age sexuality religion level of physical and mental ability and family relationships In their approach they seek to consider the lives and experiences of women as primary Hence they focus on the question of how women's encounters with the health care system are structured by gender and other socially significant dimensions of their lives rather than the question of how women differ from the male norm

Feminism in Twentieth-Century Science, Technology, and Medicine Angela N. H. Creager, Elizabeth Lunbeck, Londa Schiebinger, 2001-11 What useful changes has feminism brought to science Feminists have enjoyed success in their efforts to open many fields to women as participants But the effects of feminism have not been restricted to altering employment and professional opportunities for women The essays in this volume explore how feminist theory has had a direct impact on research in the biological and social sciences in medicine and in technology often providing the impetus for fundamentally changing the theoretical underpinnings and practices of such research In archaeology evidence of women's hunting activities suggested by spears found in women's graves is no longer dismissed computer scientists have used feminist epistemologies for rethinking the human interface problems of our growing reliance on computers Attention to women's movements often tends to reinforce a presumption that feminism changes institutions through critique from without This volume reveals the potent but not always visible transformations feminism has brought to science technology and medicine from within Contributors Ruth Schwartz Cowan Linda Marie Fedigan Scott Gilbert Evelyn M Hammonds Evelyn Fox Keller Pamela E Mack Michael S Mahoney Emily Martin Ruth Oldenziel Nelly Oudshoorn Carroll Pursell Karen Rader Alison Wylie

acclaimed Wiley Blackwell Companions to Anthropology series A Companion to the Anthropology of Reproductive Medicine and Technology is an essential resource for undergraduate and graduate students researchers and scholars in medical anthropology science technology and society cultural anthropology ethnology and gender studies as well as medical practitioners policymakers and activists involved in global and public health and reproductive justice The Impossibility of Motherhood Patrice DiQuinzio,1999-09-13 An adequate analysis of experiences and situations specific to women especially mothering requires consideration of women s difference A focus on women s difference however jeopardizes feminism s claims of women s equal individualist subjectivity and risks recuperating the inequality and oppression of women especially the view that all women should be mothers want to be mothers and are most happy being mothers This book considers how thinkers including Simone de Beauvoir Julia Kristeva Nancy Choderow and Adrienne Rich struggle to negotiate this dilemma of difference in analyzing mothering encompassing the paradoxes concerning embodiment gender and representation they encounter Patrice Di Quinzio shows that mothering has been and will continue to be an intractable problem for feminist theory itself and suggests the political usefulness of an explicitly paradoxical politics of mothering *Men, Law and Gender* Richard Collier,2010-04-05 This book presents the first published comprehensive overview and critical assessment of the relationship between law and masculinities It provides a general introduction to the subject whilst engaging with the difficult question of what it means to speak of the masculinity of law in the first place The Demands of Motherhood L. Smyth,2012-04-11 Drawing on qualitative interviews with forty middle class mothers living in Northern Ireland and the US this book explores the strategies women adopt as they take on and creatively re make motherhood in ways which allow them to cope *Gender and Technology* Nina Lerman,Ruth Oldenziel,Arwen P. Mohun,2003-10-15 McGaw Joy Parr Simon Fraser University **Biotechnology and Culture** Paul E. Brodwin,2001-01-22 Essays on technology s effect on our relationship with our bodies A timely and perceptive look at some of the most anxiety producing issues of the day Paul Rabinow University of California Berkeley As birth illness and death increasingly come under technological control struggles arise over who should control the body and define its limits and capacities Biotechnologies turn the traditional facts of life into matters of expert judgment and partisan debate They blur the boundary separating people from machines male from female and nature from culture In these diverse ways they destroy the gold standard of the body formerly taken for granted Biotechnologies become a convenient tangible focus for political contests over the nuclear family legal and professional authority and relations between the sexes Medical interventions also transform intimate personal experience giving birth building new families and surviving serious illness now immerse us in a web of machines expert authority and electronic images We use and imagine the body in radically different ways and from these emerge new collective discourses of morality and personal identity This book brings together historians anthropologists cultural critics and feminists to examine the broad cultural effects of technologies such as surrogacy tissue culture research and medical imaging The moral anxieties raised by

biotechnologies and their circulation across class and national boundaries provide other interdisciplinary themes for discourse in these essays. The authors favor complex social dramas of the refusal, celebration or ambivalent acceptance of new medical procedures. Eschewing polemics or pure theory, contributors show how biotechnology collides with everyday life and reshapes the political and personal meanings of the body. Contributors include Paul Brodwin, Lisa Cartwright, Thomas Csordas, Gillian Goslinga, Roy Deborah, Grayson Donald, Joralemon Hannah, Landecker Thomas, Laqueur Robert, Nelson Susan, Squier Janelle, Taylor and Alice Wexler. This impressive collection offers a number of rich examples of why the development of anthropological studies of science, technology and their disruptive social effects is a leading edge of critical enquiry.

Arthur Kleinman, Harvard University Applications of Feminist Legal Theory to Women's Lives, D. Kelly Weisberg, Ronnie J Steinberg, 2009. This book, the second of two volumes, examines the pressing issues that affect women: pornography, prostitution, battery, rape, pay equity, sexual harassment, motherhood, abortion, adoption, new reproductive technologies and considers them through the lens of feminist legal theory. It features more than sixty articles by well-known legal scholars and feminists. The contributions are arranged thematically and include an introduction and comprehensive literature review by the editor. Applications of Feminist Legal Theory to Women's Lives will be a valuable text for students, a resource for scholars and policy makers and a useful introduction for general readers.

Gender and Health, Jyoti Prasad Saikia, 2019-01-01. This volume has addressed the various health problems related to women, such as the impact of reproductive technologies, working hazards, widowhood and urbanization upon women's health. Along with these issues, like women's reproductive health, awareness, life expectancy etc. has also been covered. A gender perspective has been employed while addressing these various aspects. As the articles have been brought in from the various parts of India, under their purview, the heterogeneity of the problems associated with women's health in India has been made explicit.

Rereading Heterosexuality, Rachel Carroll, 2012-04-04. Heterosexuality in contemporary novels re-examined using the frameworks of feminism and queer theory. Drawing on feminist and queer theories of sex, gender and sexuality, this study focuses on female identities at odds with heterosexual norms. In particular, it explores narratives in which the conventional equation between heterosexuality, reproductive sexuality and female identity is questioned.

Troubled Bodies, Paul A. Komesaroff, 1995. Setting out the implications of the postmodern condition for medical ethics, *Troubled Bodies* challenges the contemporary paradigms of medical ethics and reconceptualizes the nature of the field. Drawing on recent developments in philosophy, philosophy of science and feminist theory, this volume seeks to expand familiar ethical reflections on medicine to incorporate new ways of thinking about the body and the dilemmas raised by recent developments in medical techniques. These essays examine the ways in which the consideration of ethical questions is shaped by the structures of knowledge and communication at work in clinical practice by current assumptions regarding the concept of the body and by the social and political implications of both. Representing various perspectives including medicine, nursing, philosophy and sociology, these essays look anew at issues of

abortion reproductive technologies the doctor patient relationship the social construction of illness the cultural assumptions and consequences of medicine and the theoretical presuppositions underlying modern psychiatry Diverging from the tenets of mainstream bioethics Troubled Bodies suggests that rather than searching for the correct coherent perspective from which to draw ethical principles we must apprehend the complexity and diversity of the discursive systems within which we dwell
