biology The Action Plan for Australian Lizards and Snakes 2017 Nicola Mitchell, Neil Cox, Philip Bowles, Reid Tingley, Stewart Macdonald, Glenn Shea, J Scott Keogh, John Woinarski, David Chapple, 2019-12-01 Lizards and snakes squamate reptiles are the most diverse vertebrate group in Australia with approximately 1000 described species representing about 10% of the global squamate diversity Squamates are a vital part of the Australian ecosystem but their conservation has been hindered by a lack of knowledge of their diversity distribution biology and key threats The Action Plan for Australian Lizards and Snakes 2017 provides the first comprehensive assessment of the conservation status of Australian squamates in 25 years Conservation assessments are provided for 986 species of Australian lizards and snakes including sea snakes Over the past 25 years there has been a substantial increase in the number of species and families recognised within Australia There has also been an increase in the range and magnitude of threatening processes with the potential to impact squamates This has resulted in an increase in the proportion of the Australian squamate fauna that is considered Threatened Notably over this period the first known extinction post European settlement of an Australian reptile species occurred an indication of the increasingly urgent need for better knowledge and management of this fauna Six key recommendations are presented to improve the conservation management and plight of Australian squamates This Action Plan represents an essential resource for research scientists conservation biologists conservation managers environmental consultants policy makers from Commonwealth and State Territory governments and the herpetological community **Snakes of the World** Van Wallach, Kenneth L. Williams, Jeff Boundy, 2014-04-22 Snakes of the World A Catalogue of Living and Extinct Species the first catalogue of its kind covers all living and fossil snakes described between 1758 and 2012 comprising 3 509 living and 274 extinct species allocated to 539 living and 112 extinct genera Also included are 54 genera and 302 species that are dubious or invalid resulting in recognition of 705 genera and 4 085 species Features Alphabetical listings by genus and species Individual accounts for each genus and species Detailed data on type specimens and type localities All subspecies synonyms and proposed snake names Distribution of species by country province and elevation Distribution of fossils by country and geological periods Major taxonomic references for each genus and species Appendix with major references for each country Complete bibliography of all references cited in text and appendix Index of 12 500 primary snake names The data on type specimens includes museum and catalog number length and sex and collector and date The listed type localities include restrictions and corrections The bibliography provides complete citations of all references cited in the text and appendix and taxonomic comments are given in the remarks sections This standard reference supplies a scientific academic and professional treatment of snakes appealing to conservationists and herpetologists as well as zoologists naturalists hobbyists researchers and teachers *Burke and Wills* EB Joyce, DA McCann, 2011-11-02 This book challenges the common assumption that little or nothing of scientific value was achieved during the Burke and Wills expedition The Royal Society of Victoria initiated the Victorian Exploring Expedition as a serious scientific exploration of hitherto unexplored regions of

inland and northern Australia Members of the expedition were issued with detailed instructions on scientific measurements and observations to be carried out covering about a dozen areas of science The tragic ending of the expedition meant that most of the results of the scientific investigations were not reported or published Burke and Wills The Scientific Legacy of the Victorian Exploring Expedition rectifies this historic omission It includes the original instructions as well as numerous paintings and drawings documents the actual science undertaken as recorded in notebooks and diaries and analyses the outcomes It reveals for the first time the true extent and limits of the scientific achievements of both the Burke and Wills expedition and the various relief expeditions which followed Importantly this new book has led to a re appraisal of the shortcomings and the successes of the journey It will be a compelling read for all those interested in the history of exploration science and natural history as well as Australian history and heritage

The Natural History of Sydney Daniel Lunney,Pat Hutchings,Dieter

Hochuli,2009-09-01 On 3 November 2007 the Royal Zoological Society of NSW held its annual forum with the topic being The natural history of Sydney It has remained as the title of this book The program contained the following introduction as the theme of the forum and it has remained as the theme for this book Sydney has a unique natural history providing a home for iconic animals and plants while remaining a global city It captured the imagination of prominent naturalists and inspired visits and collecting trips to the infant colony of New South Wales in the late 1790s and early to late 1800s From these collections flowed great descriptive works detailing the new and unusual animals and plants of the antipodes Gould Owen Huxley Peron Banks and many others recounted new and evocative flora and fauna Many collecting trips for the great museums and institutions in Europe began in Sydney Sydney still continues to engage naturalists and those grappling with the current drama of climate change and conservation The Royal Zoological Society of New South Wales founded in Sydney in 1879 is a product of the grand 19th century tradition of natural history with a particular emphasis on animal life Sydney is also home to some of Australia s oldest and finest institutions such as the Australian Museum the University of Sydney and the Royal Botanic Gardens Throughout Sydney there are places where the natural habitat has not been supplanted by urban growth and the interest in Sydney s endemic flora and fauna remains strong This forum draws on a magnificent interdisciplinary vision while continuing to employ all the modern tools in the investigation and communication of Sydney s natural history It reflects a resurgence in local history and pursues the natural history of our harbour side city in a modern framework The day of the forum was a captivating display of the diversity of the fauna of Sydney both native and introduced and its varied habitats and of the diverse ways of appreciating natural history including the history of natural history Also on display was the depth of scholarship lying behind each of the presentations The subject clearly has a profound hold on many professional biologists historians and those keen to conserve their local area but if the day is any guide there are vastly more people living in or visiting Sydney who have more than a passing interest in this topic The subject matter ranged from the history of institutions engaged in natural history through animal groups as diverse as reptiles and cicadas to ideas on how to see Sydney as a natural setting Other papers dealt with the use by Aboriginal people of the native biota in terms of fishing and being displayed in rock paintings before the arrival of the colonists There is little doubt that this theme could run to 10 volumes not just this one but the diversity of ideas skills and organisms displayed in this one book will serve as a guide to what lies beyond these pages A considerable effort was made by each author to present their material as both interesting and accurate The material is built on lifetimes of sustained effort to study record and communicate findings and ideas It is also built on the lifetime work of our predecessors who laboured to find and record the natural history of Sydney We are indebted to their efforts This book records not only the outcome of a successful day of presentations but more importantly the lifelong scholarship of those authors in each of the specialist fields Not only have the authors been absorbed by documenting the

biodiversity they have included studies or intelligent speculation on the factors which have impacted on this diversity since Cook sailed along the NSW coast in 1770 The Macquarie Dictionary e g the revised third edition defines natural history as the science or study dealing with all objects in nature and the aggregate of knowledge connected with such knowledge This makes natural history of wide interest to the entire community of Sydney both residents and visitors However we have specialised to the extent that we have focused principally on fauna the RZS being a zoological society Nevertheless plant communities are recognised as part and parcel of the natural history of Sydney as is a sense of the geography of the city with its magnificent harbour sandstone backdrop and spectacular national parks surrounding the city Also of great importance is how others in the past have seen the natural history of what is now called Sydney All these ideas are captured in this book One of the strengths of being a naturalist i e one who is versed in or devoted to natural history especially a zoologist or botanist Macquarie Dictionary is the opportunity to look across the individual disciplines be it a specialist in birds mammals or polychaetes a taxonomist or an ecologist or writer Their advantage is the ability to see the richness of a place such as Sydney Consequently most botanists and zoologists have one or two highly specialised skills but a keen interest in the broader picture and can thus appreciate the importance of for example cave art or fish diversity in the harbour and recognise that the vertebrate fauna of Sydney has changed over the 222 years since European settlement and no doubt the invertebrate fauna has changed although it is less easily assessed Our aim in this book is to draw attention to the natural history of Sydney for scholars as well as those who have the task of looking after a particular area such as within a local government area or a particular taxon such as reptiles or fish and those who have the opportunity to conserve areas taxa or institutions through their employment or legislative responsibilities It is also for teachers and lecturers colleagues in other cities and towns in Australia and those with a keen interest in managing our urban wildlife our cultural heritage or promoting the profound value of our natural heritage within a city landscape It also displays the importance of museum and herbarium collections in documenting the changes since 1770 **Annual Report** American Museum of Natural History,1922 Includes list of members **Annual Report of the President, Act of Incorporation, Constitution, By-laws and List of Members for the Year** American Museum of Natural History,1924
