Transportation of species to areas outside their native ranges has been a feature of human culture for millennia. During this time such activities have largely been viewed as beneficial or inconsequential. However, it has become increasingly clear that human caused introductions of alien biota are an ecological disruption whose consequences rival those of better known insults like chemical pollution, habitat loss, and climate change. Indeed, the irreversible nature of most alien species introductions makes them less prone to correction than many other ecological problems. Current reshuffling of species ranges is so great that the present era has been referred to by some as the Homogocene in an effort to reflect the unique magnitude of the changes being made. These alien interlopers often cause considerable ecological and economic damage where introduced. Species extinctions, food web disruptions, community alterations, ecosystem conversion, changes in nutrient cycling, fisheries collapse, watershed degradation, agricultural loss, building damage, and disease epidemics are among the destructive and frequently unpredictable ecological and economic effects that invasive alien species can inflict. The magnitude of these damages continues to grow with virtually all environments heavily used by humans now dominated by alien species, and many natural areas becoming increasingly prone to alien invasion as well. Attention to this problem has increased in the past decade or so, and efforts to prevent or limit further harm are gaining wider scientific and political acceptance.

[The Natural Communities of Georgia](#) Leslie Edwards, Jonathan Ambrose, L. Katherine Kirkman, 2013-02-01. *The Natural Communities of Georgia* presents a comprehensive overview of the state's natural landscapes, providing an ecological context to enhance understanding of this region's natural history. Georgia boasts an impressive range of natural communities, assemblages of interacting species that have either been minimally impacted by modern human activities or have successfully recovered from them. This guide makes the case that identifying these distinctive communities and the factors that determine their distribution are central to understanding Georgia's ecological diversity and the steps necessary for its conservation. Within Georgia's five major ecoregions, the editors identify and describe a total of sixty-six natural communities, such as the expansive salt marshes of the barrier islands in the Maritime ecoregion, the fire-driven longleaf pine woodlands of the Coastal Plain, the beautiful granite outcrops of the Piedmont, the rare prairies of the Ridge and Valley, and the diverse coves of the Blue Ridge. With contributions from scientists who have managed, researched, and written about Georgia landscapes for decades, the guide features more than four hundred color photographs that reveal the stunning natural beauty and diversity of the state. The book also explores

conservation issues including rare or declining species current and future threats to specific areas and research needs and provides land management strategies for preserving restoring and maintaining biotic communities The Natural Communities of Georgia is an essential reference for ecologists and other scientists as well as a rich resource for Georgians interested in the region's natural heritage
