display was the depth of scholarship lying behind each of the presentations. The subject clearly has a profound hold on many professional biologists, historians and those keen to conserve their local area, but if the day is any guide, there are vastly more people living in or visiting Sydney who have more than a passing interest in this topic. The subject matter ranged from the history of institutions engaged in natural history through animal groups as diverse as reptiles and cicadas to ideas on how to see Sydney as a natural setting. Other papers dealt with the use by Aboriginal people of the native biota in terms of fishing and being displayed in rock paintings before the arrival of the colonists. There is little doubt that this theme could run to 10 volumes, not just this one, but the diversity of ideas, skills and organisms displayed in this one book will serve as a guide to what lies beyond these pages. A considerable effort was made by each author to present their material as both interesting and accurate. The material is built on lifetimes of sustained effort to study, record and communicate findings and ideas. It is also built on the lifetime work of our predecessors who laboured to find and record the natural history of Sydney. We are indebted to their efforts. This book records not only the outcome of a successful day of presentations but more importantly the lifelong scholarship of those authors in each of the specialist fields. Not only have the authors been absorbed by documenting the biodiversity, they have included studies or intelligent speculation on the factors which have impacted on this diversity since Cook sailed along the NSW coast in 1770. The Macquarie Dictionary, e.g. the revised third edition, defines natural history as the science or study dealing with all objects in nature and the aggregate of knowledge connected with such knowledge. This makes natural history of wide interest to the entire community of Sydney, both residents and visitors. However, we have specialised to the extent that we have focused principally on fauna, the RZS being a zoological society. Nevertheless, plant communities are recognised as part and parcel of the natural history of Sydney, as is a sense of the geography of the city with its magnificent harbour, sandstone backdrop and spectacular national parks surrounding the city. Also of great importance is how others in the past have seen the natural history of what is now called Sydney. All these ideas are captured in this book. One of the strengths of being a naturalist, i.e. one who is versed in or devoted to natural history, especially a zoologist or botanist, Macquarie Dictionary is the opportunity to look across the individual disciplines, be it a specialist in birds, mammals or polychaetes, a taxonomist or an ecologist or writer. Their advantage is the ability to see the richness of a place such as Sydney. Consequently, most botanists and zoologists have one or two highly specialised skills but a keen interest in the broader picture and can thus appreciate the importance of, for example, cave art or fish diversity in the harbour and recognise that the vertebrate fauna of Sydney has changed over the 222 years since European settlement and no doubt the invertebrate fauna has changed, although it is less easily assessed. Our aim in this book is to draw attention to the natural history of Sydney for scholars as well as those who have the task of looking after a particular area, such as within a local government area or a particular taxon, such as reptiles or fish, and those who have the opportunity to conserve areas, taxa or institutions through their employment or legislative responsibilities. It is also for teachers and lecturers, colleagues in other cities and

towns in Australia and those with a keen interest in managing our urban wildlife our cultural heritage or promoting the profound value of our natural heritage within a city landscape It also displays the importance of museum and herbarium collections in documenting the changes since 1770 *Sydney's Aboriginal Past* Val Attenbrow,2010 This second edition of Sydney's Aboriginal Past draws on the latest historical archaeological geological environmental and linguistic research as well as oral evidence of present day Aboriginal people to reveal the diversity of Aboriginal life in the Sydney region before during and for the first thirty years of British settlement *Australian Snakes* Richard Shine,Rick Shine,1995 Drawing on years of experience and an impressive grasp of the literature Richard Shine covers the day to day lives of snakes discussing their anatomy evolution and habitat and describing their behavior sex habits life history and diet *Snakes of the World* Van Wallach,Kenneth L. Williams,Jeff Boundy,2014-04-22 Snakes of the World A Catalogue of Living and Extinct Species the first catalogue of its kind covers all living and fossil snakes described between 1758 and 2012 comprising 3 509 living and 274 extinct species allocated to 539 living and 112 extinct genera Also included are 54 genera and 302 species that are dubious or invalid resulting in recognition of 705 genera and 4 085 species Features Alphabetical listings by genus and species Individual accounts for each genus and species Detailed data on type specimens and type localities All subspecies synonyms and proposed snake names Distribution of species by country province and elevation Distribution of fossils by country and geological periods Major taxonomic references for each genus and species Appendix with major references for each country Complete bibliography of all references cited in text and appendix Index of 12 500 primary snake names The data on type specimens includes museum and catalog number length and sex and collector and date The listed type localities include restrictions and corrections The bibliography provides complete citations of all references cited in the text and appendix and taxonomic comments are given in the remarks sections This standard reference supplies a scientific academic and professional treatment of snakes appealing to conservationists and herpetologists as well as zoologists naturalists hobbyists researchers and teachers **Trekking the Shore** Nuno F. Bicho,Jonathan A. Haws,Loren G. Davis,2011-05-19 Human settlement has often centered around coastal areas and waterways Until recently however archaeologists believed that marine economies did not develop until the end of the Pleistocene when the archaeological record begins to have evidence of marine life as part of the human diet This has long been interpreted as a postglacial adaptation due to the rise in sea level and subsequent decrease in terrestrial resources Coastal resources particularly mollusks were viewed as fallback resources which people resorted to only when terrestrial resources were scarce included only as part of a more complex diet Recent research has significantly altered this understanding known as the Broad Spectrum Revolution BSR model The contributions to this volume revise the BSR model with evidence that coastal resources were an important part of human economies and subsistence much earlier than previously thought and even the main focus of diets for some Pleistocene and early Holocene hunter gatherer societies With evidence from North and South America Europe Africa Asia and Australia this volume

comprehensively lends a new understanding to coastal settlement from the Middle Paleolithic to the Middle Holocene

Wildlife on Farms David Lindenmayer, 2003 *Wildlife on Farms* outlines the key general features of animal habitats and describes some of the activities that can be undertaken to better conserve wildlife on a farm **Reptiles and Amphibians of Australia** Harold Cogger, 2018-10-01 *Reptiles and Amphibians of Australia* is a complete guide to Australia's rich and varied herpetofauna including frogs, crocodiles, turtles, tortoises, lizards, and snakes. For each of the 1218 species, there is a description of its appearance, distribution, and habits. These descriptions are also accompanied by distribution maps, and in many cases, one of the book's more than 1000 colour photographs of living animals. The book also includes 130 simple-to-use dichotomous keys accompanied by hundreds of explanatory drawings that in most cases allow a specimen in hand to be identified. In addition, it has a comprehensive list of scientific references for those wishing to conduct more in-depth research, an extensive glossary, and basic guides to the collection, preservation, and captive care of specimens. This classic work was originally published in 1975. The updated seventh edition contains a new Appendix that discusses recent changes and lists over 80 new or resurrected species and genera that have been added to the Australian frog and reptile fauna since the 2014 edition **Familia Gekkonidae (Reptilia, Sauria) : part I Australia and Oceania** Klaus Henle, **Australian national bibliography**, 1961 **Austral Ark** Adam Stow, Norman Maclean, Gregory I.
