

Qualitative Research Introduction

"Data analysis is a systematic search for meaning. It is a way to process qualitative data so that what has been learned can be communicated to others. Analysis means organizing and interrogating data in ways that allow researchers to see patterns, identify themes, discover relationships, develop explanations, make interpretations, mount critiques, or generate theories. It often involves synthesis, evaluation, interpretation, categorization, hypothesizing, comparison, and pattern finding. It always involves what H. F. Wolcott calls "mindwork". . . Researchers always engage their own intellectual capacities to make sense of qualitative data." (Hatch 2002, 148)

An Introduction

This document is meant to be an introduction to qualitative research for those already familiar with quantitative research. Throughout this document, the two approaches will often be compared to illustrate the distinctive elements of qualitative research. Please note that the Research Support Group does view either methodological approach as superior to the other. The research question is the best determinant of the most appropriate methodology or a combination of the two.

Qualitative vs Quantitative: Questions & Approach

In comparison to quantitative research, qualitative inquiry employs different philosophical assumptions; strategies of inquiry; and methods of data collection, analysis and interpretation (Creswell 2009, 173). A qualitative approach emphasizes the qualities of entities, processes and meanings that are not experimentally examined or measured in terms of quantity, amount, intensity or frequency (Denzin and Lincoln 2000, 8). Put another way, quality refers to a thing's essence and ambience - the what, how, when and where of it. Qualitative research thus refers to the meanings, concepts, definitions, characteristics, metaphors, symbols and description of things (Berg 2007). The research questions often stress how social experience is created and given meaning. The value-laden nature of such an inquiry stresses the relationship between the researcher and subject(s), as well as the situational constraints that shape the inquiry (Denzin and Lincoln 2011).

It may be helpful to review a list of characteristics common to several qualitative methods. Though the list below is not exhaustive (Creswell 2009, 175-6), it offers a sense of well-known qualitative research methods.

- Research is often conducted in the field, allowing direct interaction with the people being studied in their context.
- Researchers collect data themselves by examining documents, observing behavior or interviewing participants.
- Multiple sources of data are preferred over a single source; this requires the researcher to review all data, make sense of it and organize it into categories or themes that cut across all sources.
- Researchers often build their patterns, categories and themes from the bottom up (inductive analysis).
