Research Methods and Statistics Nancy Furlong,Eugene A. Lovelace,Kristin Lovelace,2000 Research Methods in Applied Settings Jeffrey A. Gliner,George A. Morgan,Nancy L. Leech,2011-03-17 Through its integrated approach to quantitative research methods this text teaches readers how to plan conduct and write a research project and select and interpret data so they can become better consumers of research This is not a statistics book there are very few formulas Rather this book helps students master which statistic to use when and how to interpret the results Organized around the steps one takes in conducting a research project this book is ideal for applied programs and for those who want to analyze and evaluate research articles Having taught in a variety of departments the authors have a good grasp of the research problems faced by master s and doctoral students in diverse areas of the behavioral and social sciences Text adopters applaud the book s clarity Students are often confused by other texts use of inconsistent terminology To avoid this confusion the authors present a semantically consistent picture that emphasizes five research approaches randomized experimental quasi experimental comparative associational and descriptive The authors then show how these approaches lead to three kinds of research designs which in turn lead to three groups of statistics with the same names This consistent framework increases comprehension and the ability to apply the material Numerous applied problems annotated examples and diagrams

and tables further promote comprehension Although the book emphasizes quantitative research the value of qualitative research is introduced This extensively revised edition features more than 50% new material including A new chapter on the evidence based approach that emphasizes the importance of reporting confidence intervals and effect sizes and the increased use of meta analysis An increased emphasis on evaluating research including an 8 step plan for evaluating research validity Chs 23 24 and its application to the 5 sample studies used throughout the book Ch 25 Lots of practical advice on planning a research project Ch 2 data collection and coding Ch 15 writing the research report Ch 27 questions to use in evaluating a research article Appendix E and creating APA tables and figures Appendix F A new chapter on non experimental approaches designs Ch 7 including qualitative research Web resources for students including critical thinking problems with answers and a sample outline of a research proposal An earlier and expanded introduction to measurement reliability and validity to further emphasize their differences and importance An extensively revised chapter on measurement validity consistent with the latest APA AERA NCME standards Fewer chapters on inferential statistics with an increased focus on how their selection is related to the design of the study and how to interpret the results using significance testing and effect sizes and confidence intervals Instructor s Resources with Power Points test questions answers to the application questions and more Intended for graduate research or quantitative experimental methods design courses in psychology education human development and family studies and other behavioral social business and health sciences independent sections and chapters can be read in many orders allowing for flexibility in assigning topics Due to its practical approach this book also appeals to researchers and clinicians Prior exposure to statistics and research methods is recommended
