careful about constructing a work for a shared audience and cause [Fluvial Hydraulics](#) S. Lawrence Dingman,2009-02-26 Fluvial Hydraulics provides a sound qualitative and quantitative understanding of water and sediment flows in natural rivers This understanding is essential for modeling and predicting hydrologic and geomorphologic processes erosion sediment transport water supply and quality habitat management and flood hazards This book s coverage bridges the gap between the highly quantitative mechanics based civil engineering approach to stream hydraulics and the more qualitative treatments of fluvial geomorphology typical of earth sciences and natural resources curricula Measurements of natural river flows illustrate many central concepts The book is specifically designed for upper level students and practitioners who are interested in a fundamental understanding of river behavior An introduction to the history of fluvial hydraulics and an overview of the morphology and hydrology of rivers provides the context for the rest of the text A thorough understanding of water properties including turbulence is developed via a series of simple thought experiments The bases of the equations that are used to describe and predict river flows are systematically presented including dimensional analysis Subsequent chapters build logically on these foundations covering velocity distributions new insights to the central topic of flow resistance the magnitudes of forces in natural river flows the principles of conservation of energy and momentum the prediction of water surface profiles the principles of flow measurement mechanics and geomorphic aspects of sediment transport The book will be especially valuable in providing a scientific basis for the growing field of river restoration An appendix reviews dimensions units and numerical precision Over 250 references are cited providing an entree to the extensive multi disciplinary literature on rivers The book s website provides suggestions for student exercises and makes available extensive data bases of measured streamflows for student exploration **Dam Failure Mechanisms and Risk Assessment** Limin Zhang,Ming Peng,Dongsheng Chang,Yao Xu,2016-08-22 This book integrates the physical processes of dam breaching and the mathematical aspects of risk assessment in a concise manner The first book that introduces the causes processes and consequences of dam failures Integrates the physical processes of dam breaching and the mathematical aspects of risk assessment in a concise manner Emphasizes integrating theory and practice to better demonstrate the application of risk assessment and decision methodologies to real cases Intends to formulate dam breaching emergency management steps in a scientific structure [Integration of Computer Modeling and Field Observations in Geomorphology](#) J.F. Shroder,M.P. Bishop,2003-09-26 The integration of classic field gathered data with new computer models has allowed many new advances in geomorphology which the 31st Binghamton Millennium Symposium 2000 presents in this latest of the well known Binghamton book series the Integration of Computer Modeling and Field Observations in Geomorphology Conceptual models have been most commonly inferred from analyses of topography and investigator perspectives derived from fieldwork The main stumbling blocks to understanding surface processes their interactions temporal changes and resulting landforms are the difficulty of observation geological timescales involved spatial scale dependencies and the inability to attribute

differences to either process or age. Physically based computer models have thus become essential tools primarily because of their ability to explore spatial and temporal trends and to determine the sensitivity of physical inputs to change without the difficulties of identification and generalization associated with the complexity of field studies. Thus the combination of both methods or the integration of field methods with computer modeling become a very powerful mechanism for robust understanding. This new book presents topics on fluvial processes of overland and channelized flow in arid, humid and periglacial areas of high and low relief as well as work on interlinked biogeographic and geomorphic fluctuations in alpine terrain and ground penetrating radar of coastal geomorphology. Issues of long term evolution of drainage networks are addressed in natural systems as well as stream table environments and terrain analyses characterize surficial and subsurface geomorphic features by using GIS and remote sensing. Botanical and biogeomorphic controls of landforms are assessed along with issues of scientific visualization, cartographic representation, DEMs, spatial analyses and scale dependencies.

The Hydraulic State Charles R. Ortloff, 2020-08-12. The Hydraulic State explores the hydraulic engineering technology underlying water system constructions of many of the ancient World Heritage sites in South America, the Middle East and Asia as used in their urban and agricultural water supply systems. Using a range of methods and techniques, some new to archaeology, Ortloff analyzes various ancient water systems such as agricultural field system designs known in ancient Peruvian and Bolivian Andean societies, water management at Nabataean Petra, the Roman Pont du Gard water distribution castellum, the Minoan site of Knossos and the water systems of dynastic and modern China, particularly the Grand Canal and early water systems designed to control flood episodes. In doing so, the book greatly increases our understanding of the hydraulic, hydrological engineering of ancient societies through the application of Complexity Theory, Similitude Theory and Computational Fluid Dynamics (CFD) analysis as well as traditional archaeological analysis methods. Serving to highlight the engineering science behind water structures of the ancient World Heritage sites discussed, this book will be of interest to archaeologists working on landscape archaeology, urbanism, agriculture and water management.
