Nuclear Science Abstracts ,1971-07 *Earth's Magnetosphere* Walter Heikkila,2011-08-13 The author argues that after five decades of debate about the interactive of solar wind with the magnetosphere it is time to get back to basics Starting with Newton s law this book also examines Maxwell s equations and subsidiary equations such as continuity constitutive relations and the Lorentz transformation Helmholtz theorem and Poynting s theorem among other methods for understanding this interaction Includes chapters on prompt particle acceleration to high energies plasma transfer event and the low latitude boundary layer More than 200 figures illustrate the text Includes a color insert **The Environment of the Earth** F. DelobEAU,2012-12-06 Among the many works devoted to our space environment this serious and objective book by Mr DelobEAU should occupy a special place It has become rare for works on such a subject to be written by competent physicists who are not specialists in the use of space vehicles While performing research on the ionosphere Mr DelobEAU was directly involved with the terrestrial environment long before it became common to explore it with sounding rockets and satellites His professional obligations no longer require him to study aeronomy only his regular collaboration with a great scientific journal inspires him to keep up to date on this subject He is particularly motivated by a disinterested appreciation of the information which he hopes to share with his readers It is a sign of the times that the results of space research should no longer be confined to the circle of space technicians All of the new tools available to the service of science for example particle accelerators magnetic resonance electron microscopy lasers have entered the general arsenal following a period of adaptation Like them the rocket is now a classical instrument and gives information even to those for whom it holds no interest in itself This book was quite up to date when the author submitted his manuscript Despite the efforts of the editor this will no longer be completely true when it appears in print There is scarcely any branch of science that evolves more rapidly than space research Scientific Satellites William R. elements necessary for the calculation of the characteristics of whistlers and whistler mode signals An introduction and brief history are followed by a summary of the theory of whistlers and a detailed explanation of the calculation of their characteristics Succeeding chapters offer a complete atlas of a variety of whistlers including those observed in satellites and those generated by nuclear explosions the results of satellite observation of whistler mode propagation the method of reducing whistler data and obtaining electron density information a full atlas of the various kinds of emissions and an outline and comparison of the theories of generation of emissions *International Aerospace Abstracts* ,1981 **Bulletin of the Atomic Scientists** ,1966-01 The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security Founded by Manhattan Project Scientists the Bulletin s iconic Doomsday Clock stimulates solutions for a safer world James Van Allen Abigail Foerstner,2009-06 Astrophysicist and space pioneer James Van Allen 1914 2006 for whom the Van Allen radiation belts were named was among the principal scientific investigators for twenty four space missions including Explorer I in 1958 the first successful U S satellite Mariner 2 s 1962 flyby of Venus the first successful mission to another planet and the 1970s Pioneer 10 and Pioneer 11 missions that surveyed Jupiter and Saturn Although he retired as a University of Iowa professor of physics and astronomy in 1985 he remained an active researcher using his campus office to monitor data from Pioneer 10 on course to reach the edge of the solar system when its signal was lost in 2003 until a short time before his death at the age of ninety one Now Abigail Foerstner blends space science drama military agendas cold war politics and the events of Van Allen s lengthy career to create the first biography of this highly influential physicist Drawing on Van Allen s correspondence and publications years of interviews with him as well as with more than a hundred other people and declassified documents from such archives as the Jet Propulsion Laboratory the Kennedy Space Center and the Applied Physics Laboratory Foerstner describes Van Allen s life from his Iowa childhood to his first experiments at White Sands to the years of Explorer I until his death in 2006 Often called the father of space science James Van Allen led the way to mapping a new solar system based on the solar wind massive solar storms and cosmic rays Pioneer 10 alone sent him more than thirty years of readings that helped push our recognition of the boundary of the solar system billions of miles past Pluto Abigail Foerstner s compelling biography charts the eventful life and time of this trailblazing physicist **Ionospheric Radio** Kenneth Davies,1990 This introductory text replaces two earlier publications Davies 1965 1969 Among the topics characteristics of waves and plasma the solar terrestrial system the Appleton formula radio soundings of the ionosphere morphology of the ionosphere oblique propagation importance of amplitude and phase earth space propagation Annotation copyrighted by Book News Inc Portland OR Library Journal ,1964-10 *Book catalog of the Library and Information Services Division* Environmental Science Information Center.
