Research The Validation Of Clinical Practice:

Research, the Validation of Clinical Practice Otto D. Payton, 1979 **Towards translating research to clinical practice: Novel Strategies for Discovery and Validation of Biomarkers for Brain Injury** Stefania Mondello, Ronald L Hayes, András Büki, Frank C Tortella, Kevin K W Wang, 2015-02-25 Traumatic brain injury TBI is a major cause of death and disability and one of the greatest unmet needs in medicine and public health TBI not only has devastating effects on patients and their relatives but results in huge direct and indirect costs to society Although guidelines for the management of patients have been developed and more than 200 clinical trials have been conducted they have resulted in few improvements in clinical outcomes and no effective therapies approved for TBI It is now apparent that the heterogeneity of clinical TBI is underlain by molecular phenotypes more complex and interactive than initially conceived and current approaches to the characterization management and outcome prediction of TBI are antiquated unidimensional and inadequate to capture the interindividual pathophysiological heterogeneity Recent advances in proteomics and biomarker development provide unparalleled opportunities for unraveling substantial injury specific and patient specific variability and refining disease characterization The identification of novel sensitive objective tools referred to as biomarkers can revolutionize pathophysiological insights enable targeted therapies and personalized approaches to clinical management In this Research Topic we present novel approaches that provide an infrastructure for discovery and validation of new biomarkers of acute brain injury These techniques include refined mass spectrometry technology and high throughput immunoblot techniques Output from these approaches can identify potential candidate biomarkers employing systems biology and data mining methods In this Research Topic we present novel approaches that provide an infrastructure for discovery and validation of new biomarkers of acute brain injury These techniques include refined mass spectrometry technology and high throughput immunoblot techniques Output from these approaches can identify potential candidate biomarkers employing systems biology and data mining methods Finally suggestions are provided for the way forward with an emphasis on need for a multidimensional approach that integrate a panel of pathobiologically diverse biomarkers with clinical variables and imaging based assessments to improve diagnosis and classification of TBI and to develop best clinical practice guidelines

Sturla,2023-07-13 **Data-Based Radiation Oncology - Design of Clinical Trials** Kerstin A. Kessel,Anne W. Lee,Søren M. Bentzen,Bhadrasain Vikram,Fridtjof Nuesslin,Stephanie E. Combs,2018-04-12 In radiation oncology as in many other specialties clinical trials are essential to investigate new therapy approaches Usually preparation for a prospective clinical trial is extremely time consuming until ethics approval is obtained To test a new treatment usually many years pass before it can be implemented in the routine care During that time already new interventions emerge new drugs appear on the market technical physical innovations are being implemented novel biology driven concepts are translated into clinical approaches while we are still investigating the ones from years ago Another problem is associated with molecular diagnostics and the growing amount of tumor specific biomarkers which allows for a better stratification of patient subgroups On the other side this may result in a much longer time for patient recruiting and consequently in larger multicenter trials Moreover all of the relevant data must be readily available for treatment decision making treatment as well as follow up and ultimately for trial evaluation This challenges even more for agreed standards in data acquisition quality and management How could we change the way currently clinical trials are performed in a way they are safe and ethically justifiable and speed up the initiation process so we can provide new and better treatments faster for our patients Further while we rely on various quantitative information handling distributed large heterogeneous amounts of data efficiently is very important Thus data management becomes a strong focus A good infrastructure helps to plan tailor and conduct clinical trials in a way they are easy and quickly analyzable In this research topic we want to discuss new ideas for intelligent trial designs and concepts for data management **Handbook of Digital Technologies in Movement Disorders** Roongroj Bhidayasiri,Walter Maetzler,2024-01-20 Over the past few years there have been fundamental changes in the diagnosing and treating patients with chronic diseases significantly affecting management of neurological movement disorders In addition the health and fitness sector developed several devices to better classify track and potentially treat chronic diseases Both handling and interpreting these large datasets has been revolutionized by machine and deep learning approaches leading to new and more effective therapies resulting in longer survival rates Handbook of Digital Technologies in Movement Disorders aims to unite these factors to provide a comprehensive guide to patient focused treatments for movement disorders This book is divided into five distinct sections starting with an introduction to digital technologies concepts and terminologies The following section reviews various perspectives on technology in movement disorders including patient and medical professionals The third section presents technologies used in detecting measuring progression and determining response to treatments This is followed by reviewing the technology used in various treatments of movement disorders including assistive and robotic technologies Finally the last section examines the challenges with technology including privacy and other ethical issues Reviews different stakeholders perspectives on technology in movement disorders Presents technological advancements for diagnosing monitoring and managing Parkinson s disease Discusses challenges with implementing technology into treatment
