RNA Processing Gene W. Yeo, 2016-06-02 Ribonucleic acid RNA binding proteins currently number in the thousands and defects in their function are at the heart of diseases such as cancer and neurodegeneration RNA binding proteins have become implicated in the intricate control of surprisingly diverse biological settings such as circadian rhythm stem cell self renewal oncogenesis and germ cell development This book surveys a range of genome wide and systems approaches to studying RNA binding proteins the importance of RNA binding proteins in development cancer and circadian rhythm

Post-Transcriptional Gene Regulation Jane Wu, 2013-04-24 Reflecting the rapid progress in the field the book presents the current understanding of molecular mechanisms of post transcriptional gene regulation thereby focusing on RNA processing mechanisms in eucaryotic cells With chapters on mechanisms as RNA splicing RNA interference MicroRNAs RNA editing and others the book also discusses the critical role of RNA processing for the pathogenesis of a wide range of human diseases The interdisciplinary importance of the topic makes the title a useful resource for a wide reader group in science clinics as well as pharmaceutical industry

Pre-mRNA Processing Angus I. Lamond, 2013-11-11 In the past fifteen years have seen tremendous growth in our understanding of the many post transcriptional processing steps involved in producing functional eukaryotic mRNA from primary gene transcripts pre mRNA New processing reactions such as splicing and RNA editing have been discovered and detailed biochemical and genetic studies continue to yield important new insights into the reaction mechanisms and molecular interactions involved It is now apparent that regulation of RNA processing plays a significant role in the control of gene expression and development An increased understanding of RNA processing mechanisms has also proved to be of considerable clinical importance in the pathology of inherited disease and viral infection This volume seeks to review the rapid progress being made in the study of how mRNA precursors are processed into mRNA and to convey the broad scope of the RNA field and its relevance to other areas of cell biology and medicine Since one of the major themes of RNA processing is the recognition of specific RNA sequences and structures by protein factors we begin with reviews of RNA protein interactions In chapter 1 David Lilley presents an overview of RNA structure and illustrates how the structural features of RNA molecules are exploited for specific recognition by protein while in chapter 2 Maurice Swanson discusses the structure and function of the large family of hnRNP proteins that bind to pre mRNA The next four chapters focus on pre mRNA splicing

Eukaryotic MRNA Processing Adrian Krainer, 1997 This volume focuses on the major aspects of post transcriptional mRNA processing in the nucleus of eukaryotic cells Each of the described mRNA reactions is required for proper gene expression and can also serve as a control point for regulating the expression of many genes for example during embryonic development or in different cell types The different chapters review the assembly of newly synthesized nuclear mRNA transcripts into hnRNP particles and catalytically active spliceosomes the structure and mechanism of action of small nuclear ribonucleoprotein particles and protein factors that catalyse pre mRNA splicing in

mammalian cells and in yeast the regulation of gene expression and generation of protein isoform diversity by alternative splicing the mechanisms of 3' end cleavage and polyadenylation the architecture of the cell nucleus in relation to these processes and to the localization of the relevant substrates and factors the diverse mechanisms of RNA processing by ribozymes and their potential relevance for nuclear mRNA processing the mechanism of spliced leader addition by trans splicing in nematodes and trypanosomes and the process of insertion deletion mRNA editing in kinetoplastid protozoa In each chapter leading researchers have provided detailed critical reviews of the history experimental approaches major advances current ideas and models as well as future directions for each of these active areas of research

Processing of RNA (1983) David Apirion, 2017-11-22 In a fast moving field it is unlikely that articles written more than a year ago would be completely up to date The purpose of this book is to bring to the nonspecialist an overall view as well as an update on the state of the art as it

existed in the beginning of 1982 and to the specialist the opportunity to have a single source of information for how the other organisms do it and also to enable him to find out the status of the various aspects of RNA processing with which he might not be to familiar even if only some of these goals are achieved all those who labored so diligently to bring about the publication of this book would be more than gratified

RNA Processing Paula Grabowski, 2011-08-29 RNA functions broadly as informational molecule genome enzyme and machinery for RNA processing While these functions reflect ancient activities they also remain vital components of contemporary biochemical pathways In eukaryotic cells RNA processing impacts the biogenesis of RNA molecules of essentially every shape and function The collection of articles in this volume describes the current state of understanding of the broad array of RNA processing events in animal and plant cells key unanswered questions and cutting edge approaches available to address these questions Some questions discussed in this volume include how viruses subvert the RNA processing machinery of the host cell how the coordination of co transcriptional RNA processing is regulated at the level of chromatin the status of RNA processing in plant organelles and how micro RNA machinery is biosynthesized and regulated

Come as You R(NA): Post-transcriptional Regulation Will Do the Rest Oriane Mauger, Michael A. Kiebler, Clémence Bernard, 2025-08-27 Recent studies have highlighted the discrepancy between transcriptional regulation and protein levels in the brain thus placing post transcriptional mechanisms at the center of neuronal function RNA molecules are highly versatile and regulated at multiple stages of their lifecycle This significantly affects both coding and non coding transcript sequences asymmetric RNA localization in specific compartments RNA stability and resulting protein production We are beginning to understand the many RNA regulatory pathways in progenitors developing and mature neurons and their links with neurological disorders It all starts in the nucleus with RNA processing regulation intimately coupled with transcription For instance alternative processing such as microexon inclusion cryptic exons intron retention or back splicing reactions and resulting circular RNAs impacts the spatio temporal dynamics of transcripts and amplifies the proteome In the cytoplasm an increasing number of pathways are now identified to control translation such as the phase transition of ribonucleoprotein condensates to fine tune protein production in particular at specific synapses Advances in omics technologies have massively accelerated our strive to understand the many contributions of post transcriptional mechanisms in the central nervous system This has highlighted the specificity of these processes at different developmental stages in different cell and synapse types in response to different stimuli and their substantial alterations in neurodevelopmental and neurodegenerative disorders Many of these post transcriptional regulatory steps are well conserved throughout evolution Others have emerged exclusively in primates supporting the compelling hypothesis that post

transcriptional mechanisms could play a pivotal role in species evolution This now paves the way to investigate their functional relevance for neuronal circuits and higher cognitive functions The revolution of CRISPR and the thorough manipulation of gene sub sequences without interfering with global gene expression provides a means to directly address the role of post transcriptional events on neuron development and plasticity We anticipate that a better understanding of the underlying principles of these mechanisms will provide unprecedented insight into various brain functions This Research Topic aims to highlight the recent progress on post transcriptional processes involved in the development function and plasticity of brain cells We welcome Perspective and Review Articles Themes to be addressed in this Topic include but are not limited to diverse forms of RNA processing e g alternative splicing RNA editing chemical modifications and their functional relevance roles of non coding RNAs e g microRNAs long non coding RNAs circular RNAs mechanisms of RNA export transport and localization mRNA translational control and its local regulation in specific subcellular compartments ribonucleoprotein condensates for translational control technical challenges for single cell and single synapse characterization of post transcriptional programs post transcriptional regulation across species
