their mouths when closed The saber toothed cat had a very sharp set of canines and a mouth nearly twice the size of a lion It didn't have a strong jaw so it could bite bones but it did use its teeth to tear prey to pieces While the cat's teeth were very sharp and used for ripping and tearing they didn't rely on them as a weapon their teeth grew at an impressive eight millimeters per month a rate equal to that of a human The saber toothed cat had long muscular legs and a bobtail Modern cats don't have long tails which provides stability while chasing prey The saber toothed cat would have had to wait until its prey was in position for a fatal bite Instead of chasing prey a saber toothed cat would have had to ambush to protect its teeth Although the Saber Tooth Cat is now extinct they were the most common predators of their time The first saber toothed creatures shared the same jaw structure as leopards and as their jaws grew longer their canines became increasingly sharp and their muscles became stronger the saber toothed cat eventually populated all of North and South America While the saber toothed cat had many species the one most commonly known is *Smilodon fatalis* **Saber-Toothed Cat** Harold T. Rober, 2017-08-01 Audisee eBooks with Audio combine professional narration and text highlighting for an engaging read aloud experience What if the neighborhood cat had teeth that measured a foot long Saber tooth cats have been extinct for thousands of years but once upon a time they were the predators of their neighborhoods Learn more about the different types of these ancient felines with diagrams critical thinking questions and more compiled in an accessible and interesting format for young readers **Sabertooth Cat** Janet Riehecky, 2008 Simple text and illustrations describe sabertooth cats how they lived and how they became extinct Provided by publisher **Sabertooth** Mauricio Antón, 2013-11-22 A unique review of the many unusual and nearly worldwide occurrences of sabertooths and their relatives over more than 50 million years Choice With their spectacularly enlarged canines sabertooth cats are among the most popular of prehistoric animals yet it is surprising how little information about them is available for the curious layperson What's more there were other sabertooths that were not cats animals with exotic names like nimravids barbourfelids and thylacosmilids Some were no taller than a domestic cat others were larger than a lion and some were as weird as their names suggest Sabertooths continue to pose questions even for specialists What did they look like How did they use their spectacular canine teeth And why did they finally go extinct In this visual and intellectual treat of a book Mauricio Antón tells their story in words and pictures all scrupulously based on the latest scientific research The book is a glorious wedding of science and art that celebrates the remarkable diversity of the life of the not so distant past The best paleomammal artist working today and his knowledge of sabertooths and their evolution is second to none Lars Werdelin Swedish Museum of Natural History Mauricio Antón is one of the best paleoartists What sets him apart is the fact that he is a great paleontologist in his own right Probably no one else has thought more about sabertooth than he has As a result his illustrations often demonstrate a particular behavior of the extinct mammal that he has personally researched or display a unique point of view Xiaoming Wang Natural History Museum of Los Angeles Sabertooth Cat Helen Frost, 2005 A digital solution for your classroom with features
