The Semantics of Relationships R. Green, C.A. Bean, Sung Hyon Myaeng, 2002-07-31 Looking at relationships in information retrieval beyond conventional topic matching relationships 12 chapters are presented by Green information studies U of Maryland US Bean National Library of Medicine US and Myaeng information and communication Chungnam National U South Korea The papers explore hyponymic troponymic and meronymic relationships examine the role of relationships in knowledge presentation and reasoning and present applications that make central use of relationships The editors consider this a companion volume to the earlier Relationships in the Organization of Knowledge 2001 Annotation c 2003 Book News Inc Portland OR booknews com The Semantics of Relationships R. Green, C.A. Bean, Sung Hyon Myaeng, 2013-04-18 The genesis of this volume was the participation of the editors in an ACMISIGIR Association for Computing Machinery Special Interest Group on Information Retrieval workshop entitled Beyond Word Relations Hetzler 1997 This workshop examined a number of relationship types with significance for information retrieval beyond the conventional topic matching relationship From this shared participation came the idea for an edited volume on relationships with chapters to be solicited from researchers and practitioners throughout the world Ultimately one volume became two volumes The first volume Relationships in the Organization of Knowledge Bean Green 2001 examines the role of relationships in knowledge organization theory and practice with emphasis given to thesaural relationships and integration across systems languages cultures and disciplines This second volume examines relationships in a broader array of contexts The two volumes should be seen as companions each informing the other As with the companion volume we are especially grateful to the authors who willingly accepted challenges of space and time to produce chapters that summarize extensive bodies of research The value of the volume clearly resides in the quality of the individual chapters In naming this volume The Semantics of Relationships An Interdisciplinary Perspective we wanted to highlight the fact that relationships are not just empty connectives Relationships constitute important conceptual units and make significant contributions to meaning

Theories of Geographic Concepts Marinos Kavouras, Margarita Kokla, 2007-12-20 Most widely available approaches to semantic integration provide ad hoc non systematic subjective manual mappings that lead to procrustean amalgamations to fit the target standard an outcome that pleases no one Written by experts in the field Theories of Geographic Concepts Ontological Approaches to Semantic Integration emphasizes the Probing Semantic Relations Alain Auger, Caroline Barrière, 2010 Semantic relations are at the core of any representational system and are keys to enable the next generation of information processing systems with semantic and reasoning capabilities Acquisition description and formalization of semantic relations are fundamentals in computer based systems where natural language processing is required Probing Semantic Relations provides a state of the art of current research trends in the area of knowledge extraction from text using linguistic patterns First published as a Special Issue of Terminology 14 1 2008 the current book emphasizes how definitional

knowledge is conveyed by conceptual and semantic relations such as synonymy causality hypernymy generic specific and meronymy part whole Showing the difficulties and successes of pattern based approaches the book illustrates current and future challenges in knowledge acquisition from text This book provides new perspectives to researchers and practitioners in terminology knowledge engineering natural language processing and semantics Societal Challenges and Geoinformatics A. Knowledge Engineering For the geospatial domain Kuhn 21 and Raubal and Kuhn 26 have attempted to support human actions in ontologies for transportation Acknowledging the importance of human actions in the geographic domain a research workshop was held in 2002 bringing together experts from different disciplines to share the knowledge and work on this issue 1 Camara 5 one of the workshop participants has proposed that action driven spatial ontologies are formed via category theory for the case of emergency action plans

Cognitive Linguistics William Croft, D. Alan Cruse, 2004-01-22 Cognitive Linguistics argues that language is governed by general cognitive principles rather than by a special purpose language module This introductory textbook surveys the field of cognitive linguistics as a distinct area of study presenting its theoretical foundations and the arguments supporting it Clearly organised and accessibly written it provides a useful introduction to the relationship between language and cognitive processing in the human brain It covers the main topics likely to be encountered in a course or seminar and provides a synthesis of study and research in this fast growing field of linguistics The authors begin by explaining the conceptual structures and cognitive processes governing linguistic representation and behaviour and go on to explore cognitive approaches to lexical semantics as well as syntactic representation and analysis focusing on the closely related frameworks of cognitive grammar and construction grammar This much needed introduction will be welcomed by students in linguistics and cognitive science

Constructing Professional Discourse Concepción Orna-Montesinos, 2012-01-17 This book explores the fascinating role that language plays in the construction of non verbal objects by mapping out the ontological meaning of the specialised concepts and the domain specific knowledge embedded in them In doing so it provides a comprehensive linguistic insight into the discourse of professional domain specific communities and hence into the communication practices and procedures of those communities In this respect the book offers a response to the claims made by many of the most influential applied linguists today such as Vijay Bhatia 1993 2004 John Swales 1990 2004 or Ken Hyland 2002 among others who have consistently defended the need for applied linguistic research into the textual generic and social perspectives on the under researched interrelatedness of the discursive and professional practices of a discipline Specifically this book provides readers with an integrative multi perspective approach to the study of professional domain specific discourses While it mainly draws on the tenets of genre theory and discourse semantics it also nurtures from the theoretical and empirical foundations of applied linguistics cognitive linguistics corpus linguistics and ontological engineering The book starts from the analysis of domain specific texts as final written products with specific lexico grammatical semantic and rhetorical features to later enquire into the written products as textual artefacts closely linked to the social context of production and interpretation of the text This integrative approach provides fresh new insights into the way the processes of writing are affected by the community specific institutional and socio historical circumstances in which domain specific texts are produced

Medical Informatics Hsinchun Chen, Sherrilynne S. Fuller, Carol Friedman, William Hersch, 2006-07-19 Knowledge Management and Data Mining in Biomedicine covers the basic foundations of the area while extending the foundational material to include the recent leading edge research in the field The newer concepts techniques and practices of biomedical knowledge management and data mining are introduced

and examined in detail It is the research and applications in these areas that are raising the technical horizons and expanding the utility of informatics to an increasing number of biomedical professionals and researchers These concepts and techniques are illustrated with detailed case studies Linguistic and Translation Studies in Scientific Communication M. Lluïsa Gea Valor, Isabel García Izquierdo, María José Esteve, 2010 This volume offers a collection of papers which seek to provide further insights into the way scientific and technical knowledge is communicated i e written transmitted and translated nowadays not only in the academic sphere but also in society as a whole Language in science has traditionally been valued for prioritising objective propositional content however interpersonal and pragmatic dimensions as well as translation perspectives are worth exploring in order to better understand the mechanisms of specialised communication Accordingly the contributions in this volume cover topics of special interest to scholars and researchers in the fields of linguistics and translation such as the popularisation and transmission of scientific knowledge via ICTs terminology and corpus based studies in scientific discourse genres and discourse in scientific and technical communication the history and evolution of scientific language and translation of scientific texts **Granularity in the Verbalization of Events and**

Objects Katerina Stathi, 2023-08-15 The study departs from the observation that in expressing ideas some languages encode more details than others It investigates whether languages encode events and or objects at a coarse grained e g put glass as opposed to a fine grained e g lay wine glass level systematically The level of detail is termed granularity which is viewed as a cline from fine grained semantic specificity to coarse grained meaning semantic generality Four languages are investigated German English Greek and Turkish The study draws on elicited data from a naming task The verbalization of events is based on event and object descriptions in selected semantic domains The results reveal significant granularity effects between languages and language types satellite framed vs verb framed The study is relevant for scholars interested in linguistic typology lexical and semantic typology contrastive linguistics event representation psycholinguistics and cognitive semantics

Handbook on Ontologies Steffen Staab, Rudi Studer, 2013-04-17 An ontology is a description like a formal specification of a program of concepts and relationships that can exist for an agent or a community of agents The concept is important for the purpose of enabling knowledge sharing and reuse The Handbook on Ontologies provides a comprehensive overview of the current status and future perspectives of the field of ontologies The handbook demonstrates standards that have been created recently it surveys methods that have been developed and it shows how to bring both into practice of ontology infrastructures and applications that are the best of their kind Towards Affordance-Based Robot Control Erich

Rome, Joachim Hertzberg, Georg Dorffner, 2008-02-11 Today s mobile robot perception is insufficient for acting goal directedly in unconstrained dynamic everyday environments like a home a factory or a city Subject to restrictions in bandwidth computer power and computation time a robot has to react to a wealth of dynamically changing stimuli in such environments requiring rapid selective attention to decisive action relevant information of high current utility Robust and general

engineering methods for effectively and efficiently coupling perception action and reasoning are unavailable Interesting performance if any is currently only achieved by sophisticated robot programming exploiting domain features and specialties which leaves ordinary users no chance of changing how the robot acts The purpose of this volume outcome of a GI Dagstuhl Seminar held in Dagstuhl Castle in June 2006 is to give a first overview on the concept of affordances for the design and implementation of autonomous mobile robots acting goal directedly in a dynamic environment The aim is to develop affordance based control as a method for robotics The potential of this new methodology will be shown by going beyond navigation like tasks towards goaldirected autonomous manipulation in the project demonstrators
