China's Drive for the Technology Frontier Yin Li,2022-07-07 China has become an innovation powerhouse in high tech industries but the widely held view assumes the Chinese model is built on technological borrowing and state capitalism This book debunks the myths

surrounding the Chinese model with a fresh take on China s strategies for technological innovation The central argument is that indigenous innovation plays a critical role in transforming the Chinese high tech industry Like any successfully industrialized nation in history indigenous innovation in China allows industrial enterprises to assimilate knowledge developed elsewhere utilize science and technology resources and human capabilities accumulated in the country and eventually approach the technological frontier The question is how do Chinese businesses and governments engage in indigenous innovation Employing the social conditions of innovative enterprise framework developed by William Lazonick and colleagues this book analyzes how the interaction of strategy organization and finance in leading Chinese high tech firms underpinned by national institutions enables indigenous innovation with Chinese characteristics It features detailed case studies of two critical high tech industries the telecom equipment industry and the semiconductor industry and within them the business histories of leading Chinese innovators The in depth look into China s experience in indigenous innovation provides valuable lessons for advanced and emerging economies

Integrated Electronics on Aluminum Nitride

Reet Chaudhuri, 2022-12-06 This thesis outlines the principles device physics and technological applications of electronics based on the ultra wide bandgap semiconductor aluminum nitride It discusses the basic principles of electrostatics and transport properties of polarization induced two dimensional electron and hole channels in semiconductor heterostructures based on aluminum nitride It explains the discovery of high density two dimensional hole gases in undoped heterojunctions and shows how these high conductivity n and p type channels are used for high performance nFETs and pFETs along with wide bandgap RF mm wave and CMOS applications The thesis goes on to discuss how the several material advantages of aluminum nitride such as its high thermal conductivity and piezoelectric coefficient enable not just high performance of transistors but also monolithic integration of passive elements such as high frequency filters enabling a new form factor for integrated RF electronics
