Semiconductors 4ed:

Quantum Theory Of The Optical And Electronic Properties Of Semiconductors (4th Edition) Stephan W Koch, Hartmut Haug, 2004-02-24 This invaluable textbook presents the basic elements needed to understand and research into semiconductor physics. It deals with elementary excitations in bulk and low dimensional semiconductors including quantum wells, quantum wires and quantum dots. The basic principles underlying optical nonlinearities are developed including excitonic and many body plasma effects. Fundamentals of optical bistability, semiconductor lasers, femtosecond excitation, the optical Stark effect, the semiconductor photon echo, magneto optic effects as well as bulk and quantum confined Franz-Keldysh effects are covered. The material is presented in sufficient detail for graduate students and researchers with a general background in quantum mechanics.

The Chemistry and Mechanism of Art Materials Michael J. Malin, 2021-12-28 This unique book presents an integrated approach to the chemistry of art materials, exploring the many chemical processes involved. The Chemistry and Mechanism of Art Materials: Unsuspected Properties and Outcomes engages readers with historical vignettes detailing examples of unexpected outcomes due to materials used by known artists. The book discusses artists' materials, focusing on relevant chemical mechanisms which underlie the synthesis and deterioration of inorganic pigments in paintings, the ageing of the binder in oil paintings and sulfation of wall paintings as well as the toxicology of these pigments and solvents used by artists. Mechanisms illustrate the stepwise structural transformation of a variety of art materials. Based on the author's years of experience teaching college chemistry, the approach is descriptive and non-mathematical throughout. An introductory section includes a review of basic concepts and provides concise descriptions of analytical methods used in contemporary art conservation. Additional features include illustrations of chemical reactivity associated with art materials. Includes a review of chemical bonding principles, redox and mechanism writing. Covers analytical techniques used by art conservation scientists. Accessible for readers with a limited science background. Provides numerous references for readers seeking additional information.
