Séminaire de Théorie du Potentiel Paris, 1977-1978, No. 4, 2006-11-15 *Functional Analysis and Evolution Equations*

Herbert Amann, Wolfgang Arendt, Frank Neubrander, Serge Nicaise, Joachim Below, 2008-02-28 Gunter Lumer was an outstanding mathematician whose works have great influence on the research community in mathematical analysis and evolution equations He was at the origin of the breath taking development the theory of semigroups saw after the pioneering book of Hille and Phillips from 1957 This volume contains invited contributions presenting the state of the art of these topics and reflecting the broad interests of Gunter Lumer *ICPT '91* Emile M.J. Bertin, 2012-12-06 ICPT91 the International

Conference on Potential Theory was held in Amersfoort the Netherlands from August 18 24 1991 The volume consists of two parts the first of which contains papers which also appear in the special issue of POTENTIAL ANALYSIS The second part includes a collection of contributions edited and partly produced in Utrecht Professor Monna wrote a preface reminiscing about his experiences with potential theory mathematics and mathematicians during the last sixty years The final pages contain a list of participants and a compact index **Potential Theory and Dynamics on the Berkovich Projective Line**

Matthew Baker, Robert S. Rumely, 2010-03-10 The purpose of this book is to develop the foundations of potential theory and rational dynamics on the Berkovich projective line over an arbitrary complete algebraically closed non Archimedean field In addition to providing a concrete and elementary introduction to Berkovich analytic spaces and to potential theory and rational iteration on the Berkovich line the book contains applications to arithmetic geometry and arithmetic dynamics A number of results in the book are new and most have not previously appeared in book form Three appendices on analysis \mathbb{R} trees and Berkovich's general theory of analytic spaces are included to make the book as self contained as possible The authors first give a detailed description of the topological structure of the Berkovich projective line and then introduce the Hsia kernel the fundamental kernel for potential theory Using the theory of metrized graphs they define a Laplacian operator on the Berkovich line and construct theories of capacities harmonic and subharmonic functions and Green's functions all of which are strikingly similar to their classical complex counterparts After developing a theory of multiplicities for rational functions they give applications to non Archimedean dynamics including local and global equidistribution theorems fixed point theorems and Berkovich space analogues of many fundamental results from the classical Fatou Julia theory of rational iteration They illustrate the theory with concrete examples and exposit Rivera Letelier's results concerning rational dynamics over the field of p -adic complex numbers They also establish Berkovich space versions of arithmetic results such as the Fekete Szego theorem and Bilu's equidistribution theorem **Séminaire d'Algèbre Paul Dubreil et**

Nonlinear Evolution Equations and Related Topics

Wolfgang Arendt, Haim Brezis, Michel Pierre, 2012-12-06 Philippe B. Nilan was a most original and charismatic mathematician who had a deep and decisive impact on the theory of nonlinear evolution equations. The present volume is dedicated to him and contains research papers written by highly distinguished mathematicians. They are all related to B. Nilan's work and reflect the present state of this most active field. The contributions cover a wide range of nonlinear and linear equations. Special topics are Hamilton-Jacobi equations, the porous medium equation, reaction-diffusion systems, integro-differential equations, and viscoelasticity. Maximal regularity for elliptic and parabolic equations and the Ornstein-Uhlenbeck operator. Also in this volume the legendary work of B. Nilan-Brezis on Thomas-Fermi theory is published for the first time. *Potential Theory - ICPT 94* Josef Kral, Jaroslav Lukes, Ivan Netuka, Jiri Vesely, 2011-10-13 No detailed description available for Potential Theory ICPT 94

Quantum Probability and Applications V

Luigi Accardi, Wilhelm von Waldenfels, 2006-11-14 These proceedings of the workshop on quantum probability held in Heidelberg September 26-30, 1988, contain a representative selection of research articles on quantum stochastic processes, quantum stochastic calculus, quantum noise, geometry, quantum probability, quantum central limit theorems, and quantum statistical mechanics. **Selecta** Heinz Bauer, 2012-05-24 Heinz Bauer (1928-2002) was one of the prominent figures in Convex Analysis and Potential Theory in the second half of the 20th century. The Bauer minimum principle and Bauer's work on Silov's boundary and the Dirichlet problem are milestones in convex analysis. Axiomatic potential theory owes him what is known by now as Bauer harmonic spaces. These *Selecta* collect more than twenty of Bauer's research papers, including his seminal papers in Convex Analysis and Potential Theory. Above his research contributions, Bauer is best known for his art of writing survey articles. Five of his surveys on different topics are reprinted in this volume. Among them is the well-known article "Approximation and Abstract Boundary" for which he was awarded with the Chauvenet Prize by the American Mathematical Association in 1980. **Stochastic Analysis** Michel

Bouleau, 2022-02-23 *The Mathematics of Errors* presents an original rigorous and systematic approach to the calculus of errors targeted at both the engineer and the mathematician Starting from Gauss's original point of view the book begins as an introduction suitable for graduate students leading to recent developments in stochastic analysis and Malliavin calculus including contributions by the author Later chapters aimed at a more mature audience require some familiarity with stochastic calculus and Dirichlet forms Sensitivity analysis in particular plays an important role in the book Detailed applications in a range of fields such as engineering robotics statistics financial mathematics climate science or quantum mechanics are discussed through concrete examples Throughout the book error analysis is presented in a progressive manner motivated by examples and appealing to the reader's intuition By formalizing the intuitive concept of error and richly illustrating its scope for application this book provides readers with a blueprint to apply advanced mathematics in practical settings As such it will be of immediate interest to engineers and scientists whilst providing mathematicians with an original presentation Nicolas Bouleau has directed the mathematics center of the Ecole des Ponts ParisTech for more than ten years He is known for his theory of error propagation in complex models After a degree in engineering and architecture he decided to pursue a career in mathematics under the influence of Laurent Schwartz He has also written on the production of knowledge sustainable economics and mathematical models in finance Nicolas Bouleau is a recipient of the Prix Montyon from the French Academy of Sciences

Festschrift Masatoshi Fukushima: In Honor Of Masatoshi Fukushima's Sanju Zhen-qing Chen, Niels Jacob, Masayoshi Takeda, Toshihiro Uemura, 2014-11-27 This book contains original research papers by leading experts in the fields of probability theory stochastic analysis potential theory and mathematical physics There is also a historical account on Masatoshi Fukushima's contribution to mathematics as well as authoritative surveys on the state of the art in the field

Function Spaces and Potential Theory David R. Adams, Lars I. Hedberg, 2012-12-06 Function spaces especially those spaces that have become known as Sobolev spaces and their natural extensions are now a central concept in analysis In particular they play a decisive role in the modern theory of partial differential equations PDE Potential theory which grew out of the theory of the electrostatic or gravitational potential the Laplace equation the Dirichlet problem etc had a fundamental role in the development of functional analysis and the theory of Hilbert space Later potential theory was strongly influenced by functional analysis More recently ideas from potential theory have enriched the theory of those more general function spaces that appear naturally in the study of nonlinear partial differential equations This book is motivated by the latter development The connection between potential theory and the theory of Hilbert spaces can be traced back to C F Gauss 181 who proved with modern rigor supplied almost a century later by O Frostman 158 the existence of equilibrium potentials by minimizing a quadratic integral the energy This theme is pervasive in the work of such mathematicians as D Hilbert Ch J de La Vallée Poussin M Riesz O Frostman A Beurling and the connection was made particularly clear in the work of H Cartan 97 in the 1940's In the thesis of J Deny 119 and in the subsequent work of J Deny

and J L Revue Roumaine de Mathématiques Pures Et Appliquées ,1989 *Differential Geometry and Differential Equations* Chaohao Gu, Marcel Berger, Robert L. Bryant, 2006-11-15 The DD6 Symposium was like its predecessors DD1 to DD5 both a research symposium and a summer seminar and concentrated on differential geometry This volume contains a selection of the invited papers and some additional contributions They cover recent advances and principal trends in current research in differential geometry
